Jing-Zhang AI:
People, City, Shared Endeavor

A traceable spatial framework linking railway memory, open innovation, and everyday public life.

M **Mixed renewal** → **A** **Low-carbon access** → **P** **Public life**

Jing-Zhang AI: People, City, Shared Endeavor

A readable civic spine linking railway memory, open innovation, and everyday public life.

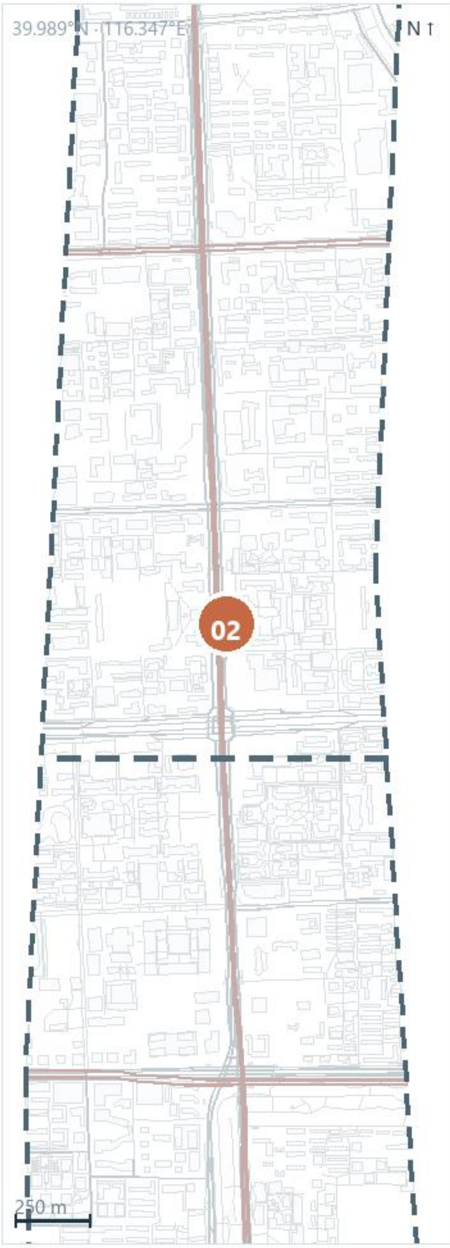
ALL Corridor overview

One physical scale
east–west and north–south

01 Zhongzhiyuan

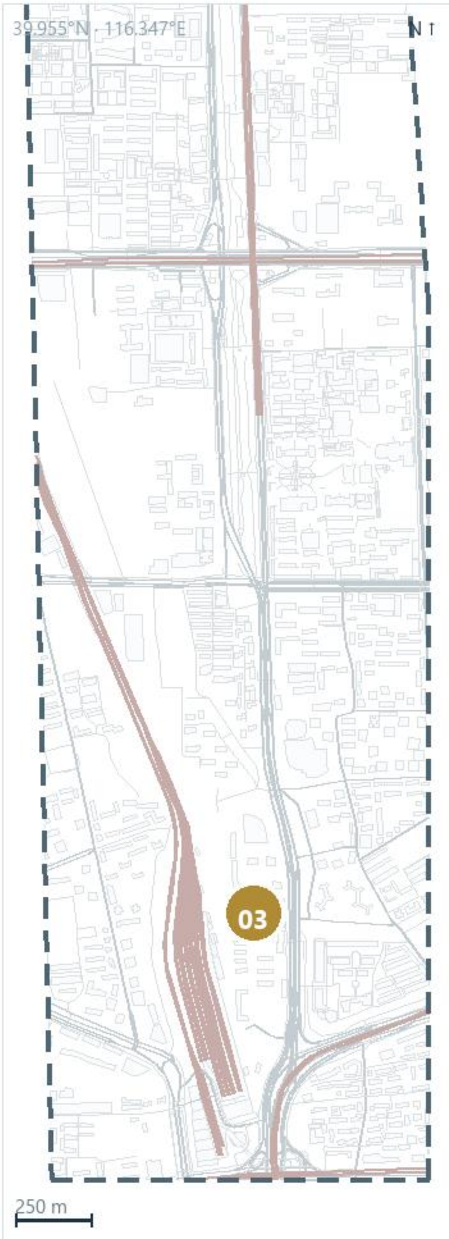
Local enlargement · candidate location to verify

02 AI Origin



Local enlargement · candidate location to verify

03 Dazhongsi



Local enlargement · candidate location to verify

Three cross-area lenses (all span 01–03)

H / O / P are not area numbers; every lens applies across 01, 02, and 03.

H **Railway heritage thread**
Applies to 01 · 02 · 03: make railway traces accessible and learnable.

O **Open innovation mechanism**
Applies to 01 · 02 · 03: connect release, testing and collaboration, not a single AI land-use zone.

P **Public-life network**
Applies to 01 · 02 · 03: support daily life through edges, walking, staying and non-digital service.

Spatial objects

01 / 02 / 03 = taskbook key-area numbers

01 Zhongzhiyuan   02 AI Origin   03 Dazhongsi

Concept linkage fragment
A discussion segment (ROAD-001) proposing a civic-link direction; not a built road or continuous corridor. Verify roads, entrances, crossings, and barriers.

Provisional overall extent (not parcel/redline)

Context morphology (OSM)

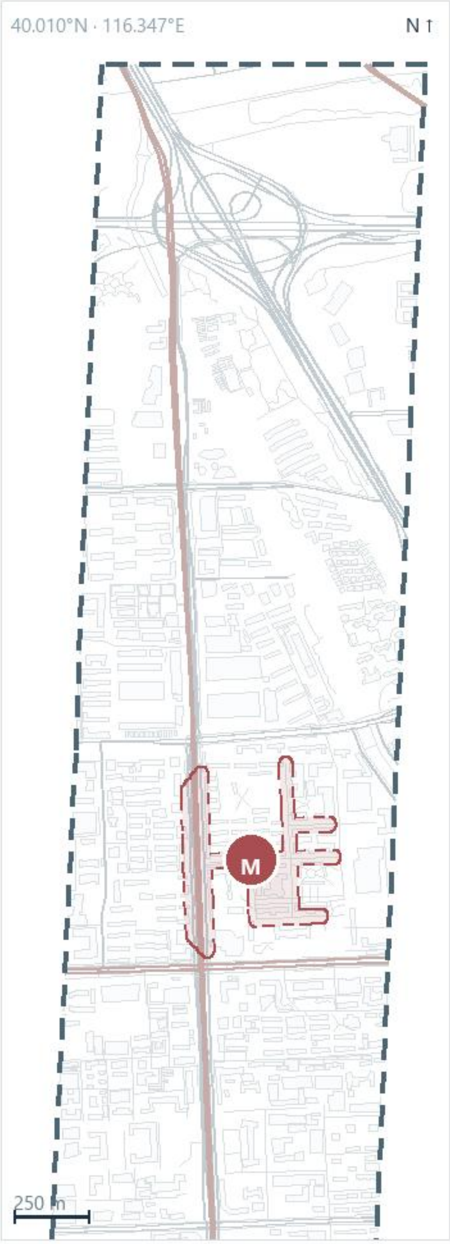
Mixed-renewal fields: let urban texture enter the design first

Four colours restate the current draft parameters by area; OSM streets and buildings locate concept fields.

ALL Corridor overview

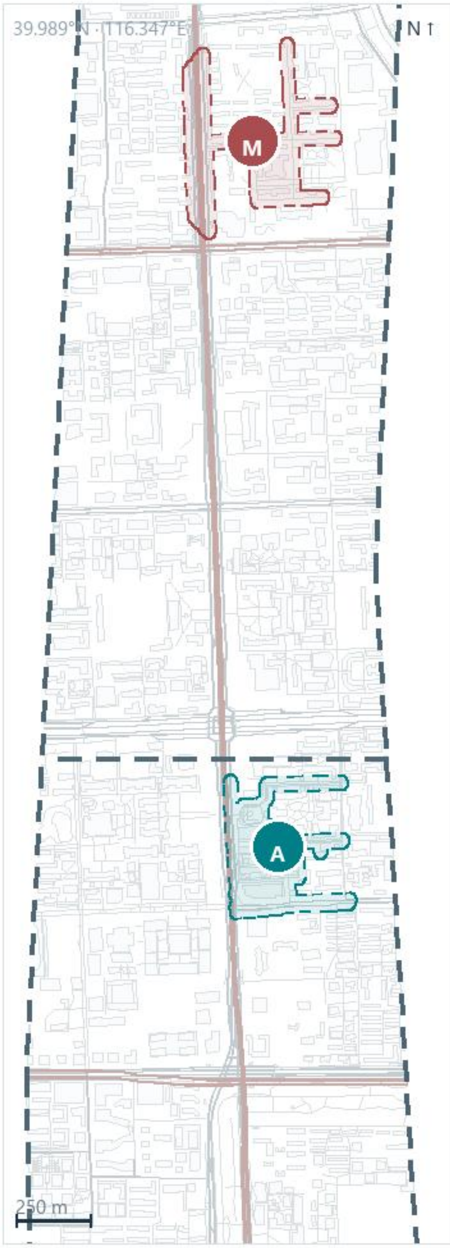
One physical scale
east–west and north–south

01 Zhongzhiyuan



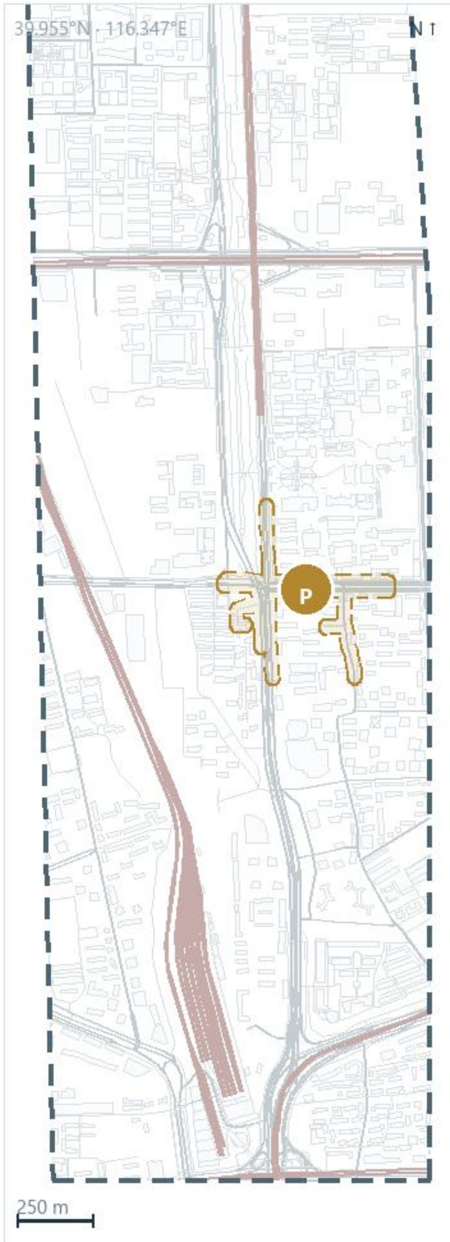
Local enlargement · candidate location to verify

02 AI Origin



Local enlargement · candidate location to verify

03 Dazhongsi



Local enlargement · candidate location to verify

Draft area ledger (not a planning target)

Derived from an agent-generated topology partition; not existing statistics, demand forecasts, statutory use or parcel boundaries.

100% current-draft area ledger

AI research / innovation	23%
Park and open space	23%
Industry and commercial service	30%
Community service and support	24%

Calculation basis: normalised agent-generated area_sqm_declared for LU-001–004. This is not external demand evidence; recalibrate with existing use, ownership, reuse capacity and service gaps.

Three spatial tests

M / A / P locate the intervention fields and review actions.

M **Mixed and incremental renewal**
Start with small, reversible active-edge improvements; do not presume demolition.

A **Low-carbon access network**
Use verifiable streets for short routes and civic service before AI.

P **Stayable public life**
Observe accessible, stayable and adjustable nodes before scaling scenarios.

How to read the map

Concept fields follow OSM street/building texture; they are not parcels, redlines or existing land use.

M mixed renewal   A access network   P public life

The three colours correspond to M / A / P; each is a concept field aligned to OSM morphology.

Three taskbook areas: AI is the name, while spatial roles differ

Official names retain AI; corner cues show provisional search extents, while street grain locates discussion anchors and ordinary urban roles come before technology.

ALL Corridor overview

One physical scale
east–west and north–south

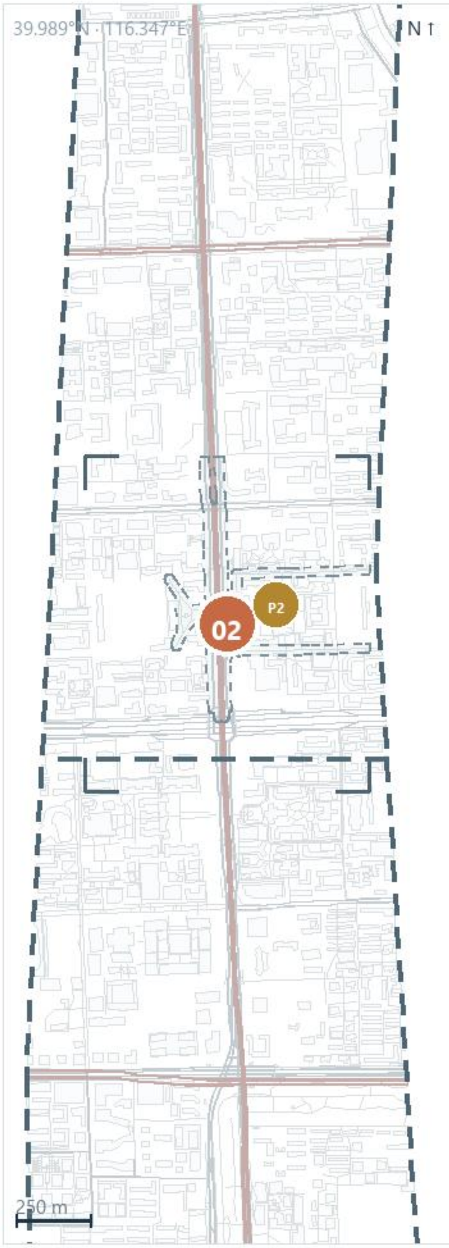
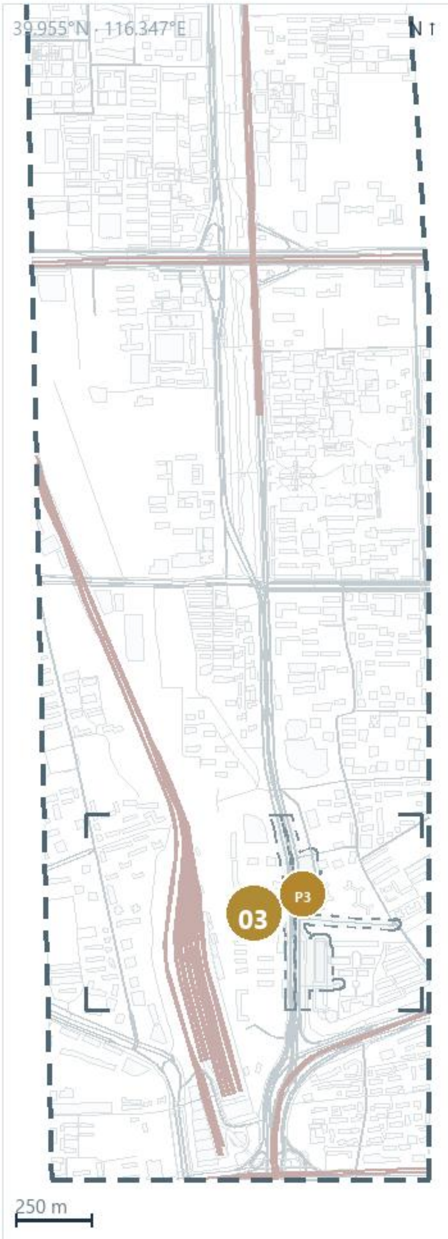
Local enlargement · candidate location to verify

02 AI Origin



Local enlargement · candidate location to verify

03 Dazhongsi



Local enlargement · candidate location to verify

Names and spatial tasks

Numbers index taskbook focus areas; colour bars locate places and grey street-responsive texture only locates actions; neither is a land-use zone.

01 **Zhongzhiyuan AI acceleration area**

Qinghe–railway learning edge

First make an accessible waterfront, walking and learning edge; release or testing is a reversible service layer after review.

02 **Beijing AI Origin Community**

Campus–neighbourhood daily exchange

Link campus, neighbourhood and park with short routes, shared edges and daily services; technology does not replace housing or amenities.

03 **Dazhongsi AI industry cluster**

Station access and incremental renewal

First resolve four-quadrant walking, service frontages and green links; then assess demonstration or roadshow scenarios.

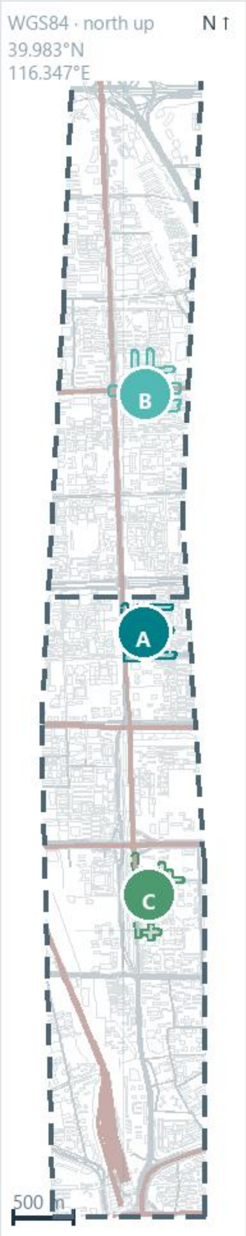
Reading key

- Colour = place index
- Corner cues = provisional search extent
  Not a parcel or ownership boundary
- P1 / P2 / P3 = candidate public-life test anchors
  Indicative locations; not verified existing stayable spaces
- Grey texture = street-responsive action anchors
  OSM morphology proxy

Slow-mobility and blue-green choices: read street conditions before AI

Three concept fields follow open street morphology; they are reviewable spatial moves, not existing green space, road redlines, or a confirmed continuous corridor.

ALL Corridor overview



One physical scale
east–west and north–south

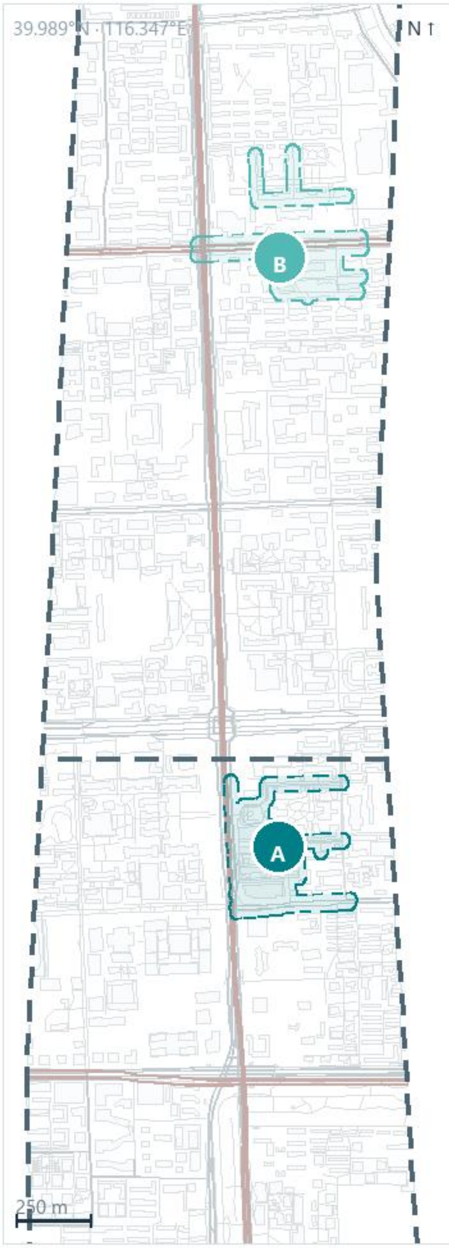
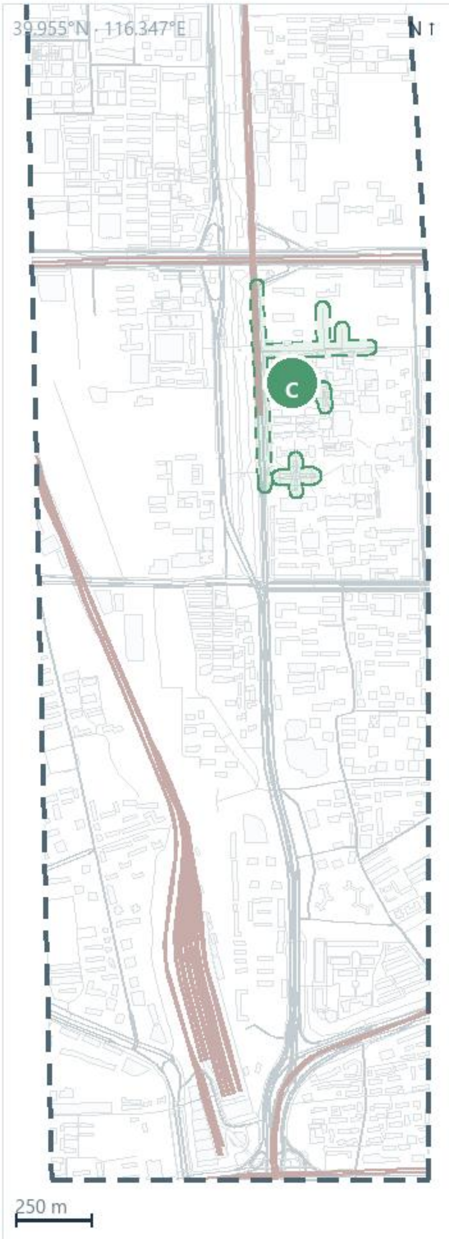
Local enlargement · candidate location to verify

02 AI Origin



Local enlargement · candidate location to verify

03 Dazhongsi



Local enlargement · candidate location to verify

Three spatial moves

Three forms, three meanings; data gaps are not facilities and open texture is not promoted into a legal boundary.

A **Slow-mobility and civic-service field**
Extract a route from this concept field only after road, entrance, and crossing checks; its dashed edge means unverified.

B **Public-life interface candidate**
Test staying and staffed service at accessible edges; a concept field is not existing open space.

C **Shade and open-space candidate**
Verify existing green, canopy, and management boundaries before ecological or staying improvements.

Sequence

01 Verify the network → 02 Improve staying → 03 Add AI last

Verification inputs (not map objects)

G1–G3 are evidence-input groups, not peers of the A/B/C concept fields.

- G1 Network: roads · entrances · crossings
- G2 Public life: accessible edges · staying · staffed service
- G3 Ecology: existing green · canopy · management edge

Three spatial tests: from spatial moves to use decisions

M / A are concept fields; P1–P3 are three candidate public-life check anchors.

Design quantities

Only quantities recalculable from the submitted geometry are shown.

Overall design area	11,412,825 m²
Designed green ratio	12.3%
Public-space ratio	7.3%
Key-area count	3

Map symbols

M Mixed field
A Access field
P1–P3 check anchors
ROAD-001 discussion segment
Provisional extent

Spatial anchors and source figures

M points to Fig. 02 and A to Fig. 04; P1–P3 correspond to key areas 01–03 in Fig. 03. The cards state each advance condition.

M

Mixed and incremental renewal

M / Fig. 02

Start with small active-edge improvements, then decide heavier renewal from evidence.

Advance only when

Land use, ground-floor activity, and building condition are evidenced.

A

Low-carbon access network

A / Fig. 04

Discuss an AI interface only after walking and civic service are continuous.

Advance only when

Entrances, streets, crossings, and barriers pass network review.

P

Stayable public life

P1–P3 / areas 01–03 in Fig. 03

Three candidate check anchors correspond to the three key areas.

Advance only when

A local independent team completes anonymised aggregate stay observation.
