

JINGZHANG OPEN HOUSE

Turn every AI visit into a contribution to the city.

Design basis and open logic

PROPOSITION

Open House turns an AI visit into an accountable city contribution. It is an operating system, not a visitor centre.

PROCESS

Arrive -> assemble -> co-test -> receipt -> adopt or exit -> open knowledge.

DATA STATUS

Overall and Key Area polygons are provisional rough constraints. They are not statutory redlines.

EVIDENCE

GeoJSON and metrics are authoritative; figures, HTML and PDFs are explanatory layers.

OPEN PROCESS

Capital works must pass mission assembly, public testing and receipts; landmark form cannot replace operating evidence.

Master narrative and spatial skeleton

01 MASTER NARRATIVE

Jingzhang Open House: Turn Every Visit into a Contribution

ONE OPEN PROCESS

- ARRIVE
- ASSEMBLE
- CO-TEST
- RECEIPT
- ADOPT / EXIT

SPATIAL SKELETON

- 1 open public corridor
- 3 urban rooms
- 2 service wings
- 12 open ports**

Not a closed AI park: technology, scenarios, residents, capital, rules and accountable people meet at one city mission table.

Global mechanisms and identity

IDENTITY

Doorway + Jing-Zhang trajectory + contribution port. Rail ink, signal coral, civic green, collaboration yellow and infrastructure blue.

TALENT

Mission opportunity, family life, public trust and contribution are designed together.

CASES

Punggol, Brainport, STATION F, Kalasatama, Kendall, Woven City, Quayside and IN Amsterdam are compared as mechanisms, not copied as forms.

COUNTEREXAMPLE

Open House rejects closed living labs, technology for its own sake, and governance promises without resident power.

OPEN PROCESS

Capital works must pass mission assembly, public testing and receipts; landmark form cannot replace operating evidence.

Land use and innovation-to-adoption chain

02 LAND USE AND PROGRAM

Seven District Bands, One Innovation-to-Adoption Chain

05 City Adoption and Global Launch

0802 Applied AI and Enterprise Collaboration

0702 Global Talent and Community Services

1401 Jingzhang Open Park

0802 AI Origin Co-creation

0803 Open Learning and Tech Culture

0802 Full-stack Autonomous Innovation

FOUR OPEN LAYERS

OPEN ACCESS / low-friction entry

OPEN ROOMS / spatial collaboration

MISSION TABLE / accountable assembly

OPEN RECEIPT / public value record

Detailed design of three urban rooms

03 THREE KEY AREAS

Three Urban Rooms Remove Three Different Innovation Bottlenecks

01

DAZHONGSI | CITY ADOPTION ROOM

- Global launch and experience
- Smart-native commerce
- Visible public return

02

AI ORIGIN | CO-CREATION ROOM

- University transfer
- Resident-talent co-creation
- Open-source commons

03

ZHONGZHIYUAN | AUTONOMOUS R&D ROOM

- Full-stack autonomy
- Data and safety review
- Standards and global links

Six personas and public-interest contract

01 RESEARCHER	48-hour mission, collaborator and compliance entry
02 FOUNDER	Scenario, data, first customer and IP support
03 RESIDENT	Know what is tested, opt out, and see public value
04 WORKER	Participate in workflow improvement and retraining
05 ALL AGES	Accessible, understandable and reversible services
06 OPERATOR	Validate safely and obtain an adoption decision

A benefit designed for global talent must also strengthen everyday access for residents, workers, older people, children and disabled users.

Twelve open ports

Each port is both a physical node and an operating protocol.

01 Arrival Exchange	User + accountable human + success receipt + stop condition
02 AI City Gallery	User + accountable human + success receipt + stop condition
03 Smart-native Market	User + accountable human + success receipt + stop condition
04 Resident Co-design Desk	User + accountable human + success receipt + stop condition
05 Family Learning Yard	User + accountable human + success receipt + stop condition
06 AI Origin Salon	User + accountable human + success receipt + stop condition
07 Open-source Foundry	User + accountable human + success receipt + stop condition
08 Cross-border IP Clinic	User + accountable human + success receipt + stop condition
09 Standards and Safety Lab	User + accountable human + success receipt + stop condition
10 Compute and Data Match Desk	User + accountable human + success receipt + stop condition
11 Forest Mobility Lab	User + accountable human + success receipt + stop condition
12 Global Release Hall	User + accountable human + success receipt + stop condition

Mobility, accessibility and blue-green system

04 MOBILITY AND BLUE-GREEN SYSTEM

Turn a Commuting Corridor into All-day Civic Innovation Infrastructure

ONE CORRIDOR, FOUR SPEEDS

	WALK 5 km/h
	CYCLE 15 km/h
	SHUTTLE 20 km/h
	MISSION LIVE

PUBLIC-FIRST RULES

- 01 Continuous accessibility
- 02 Shade and stormwater first
- 03 Opt-out from test periods
- 04 Public operating receipts**

Routes, speeds and facility sizes are conceptual and require transport, utility, rail and accessibility review.

Implementation and long-term operation

2026-2028

Open First: Arrival Exchange, mission table, receipt protocol and two thresholds.

2028-2030

Connect the Rooms: three rooms, park links, family learning and cross-area missions.

2030-2035

Scale the System: full-stack validation, standards collaboration and transferable ports.

OPEN HOUSE 168

A 168-hour annual cross-area mission relay, governed by six stakeholder groups.

OPEN PROCESS

Capital works must pass mission assembly, public testing and receipts; landmark form cannot replace operating evidence.

Metrics, receipts and evidence ladder

05 METRICS AND EVIDENCE

Every Innovation Project Must Leave a Public-value Receipt

11.41 km²

Provisional work area

3

Key urban rooms

12

Open scenario ports

3

Delivery phases

MISSION RECEIPT: FROM TECH METRICS TO PUBLIC OUTCOMES

WHO BENEFITS

Residents, visitors and service workers receive a measurable improvement

WHO OWNS IT

Every test has a traceable accountable human

HOW TO EXIT

Pause, withdraw and restore when risks emerge

WHAT REMAINS

Open standards, reusable components, public space or service capacity

EVIDENCE LADDER

- L0 Brief and standards
- L1 Recomputable geometry
- L2 Operating prototypes
- L3 Public receipt and audit
- L4 Transferable open knowledge

FAR / height / demolition: pending official data

Risk, compliance and reversal triggers

Do not advance a phase when independent evaluation cannot show public value.

01

Provisional data never appears as official

02

Residents and vulnerable users hold real seats

03

Every service keeps a non-digital option

04

Every test has a human owner and stop rule

05

Failure enters the evidence record

06

FAR, height and demolition await official data

REVERSE: restore public passage, reduce surveillance, pause construction, or recalculate all geometry when evidence fails.
