

JING-ZHANG URBAN WEAVE

A Centennial Public Innovation Belt for AI | English companion boards

PROVISIONAL INTAKE PACKAGE

Board 01 | One spine, three stations, two wings

The railway memory spine is interpreted as a public connector rather than a new statutory boundary.

The three stations differentiate research and standards, near-campus co-creation, and application transfer. The two wings connect technical services and everyday life.

The design intent is to stitch fragmented interfaces among park, campus, industry, community, water, and transit through reversible, reviewable public-space scenarios.

Board 02 | From prototype to public value

Open-Source School, Riverbank Lab, Smart-Life Theater, Application Showcase, Memory Compiler, Standards Workshop, Care Wayfinding Desk, shared-time scheduling, microclimate observatory, and developer translation desk form a ten-card testing system.

A scenario is eligible only when its data boundary, operator, reviewer, public explanation, observable output, and exit condition are explicit.
