

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy - Master Concept Board (A0)

Three nodes • one loop network | single-caliber land-use structure | all conceptual (provisional)

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Overall design scope overview (three nodes & one loop network; corridor rotated view, N→right)

Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (announcement); this package is a provisional sub-scope

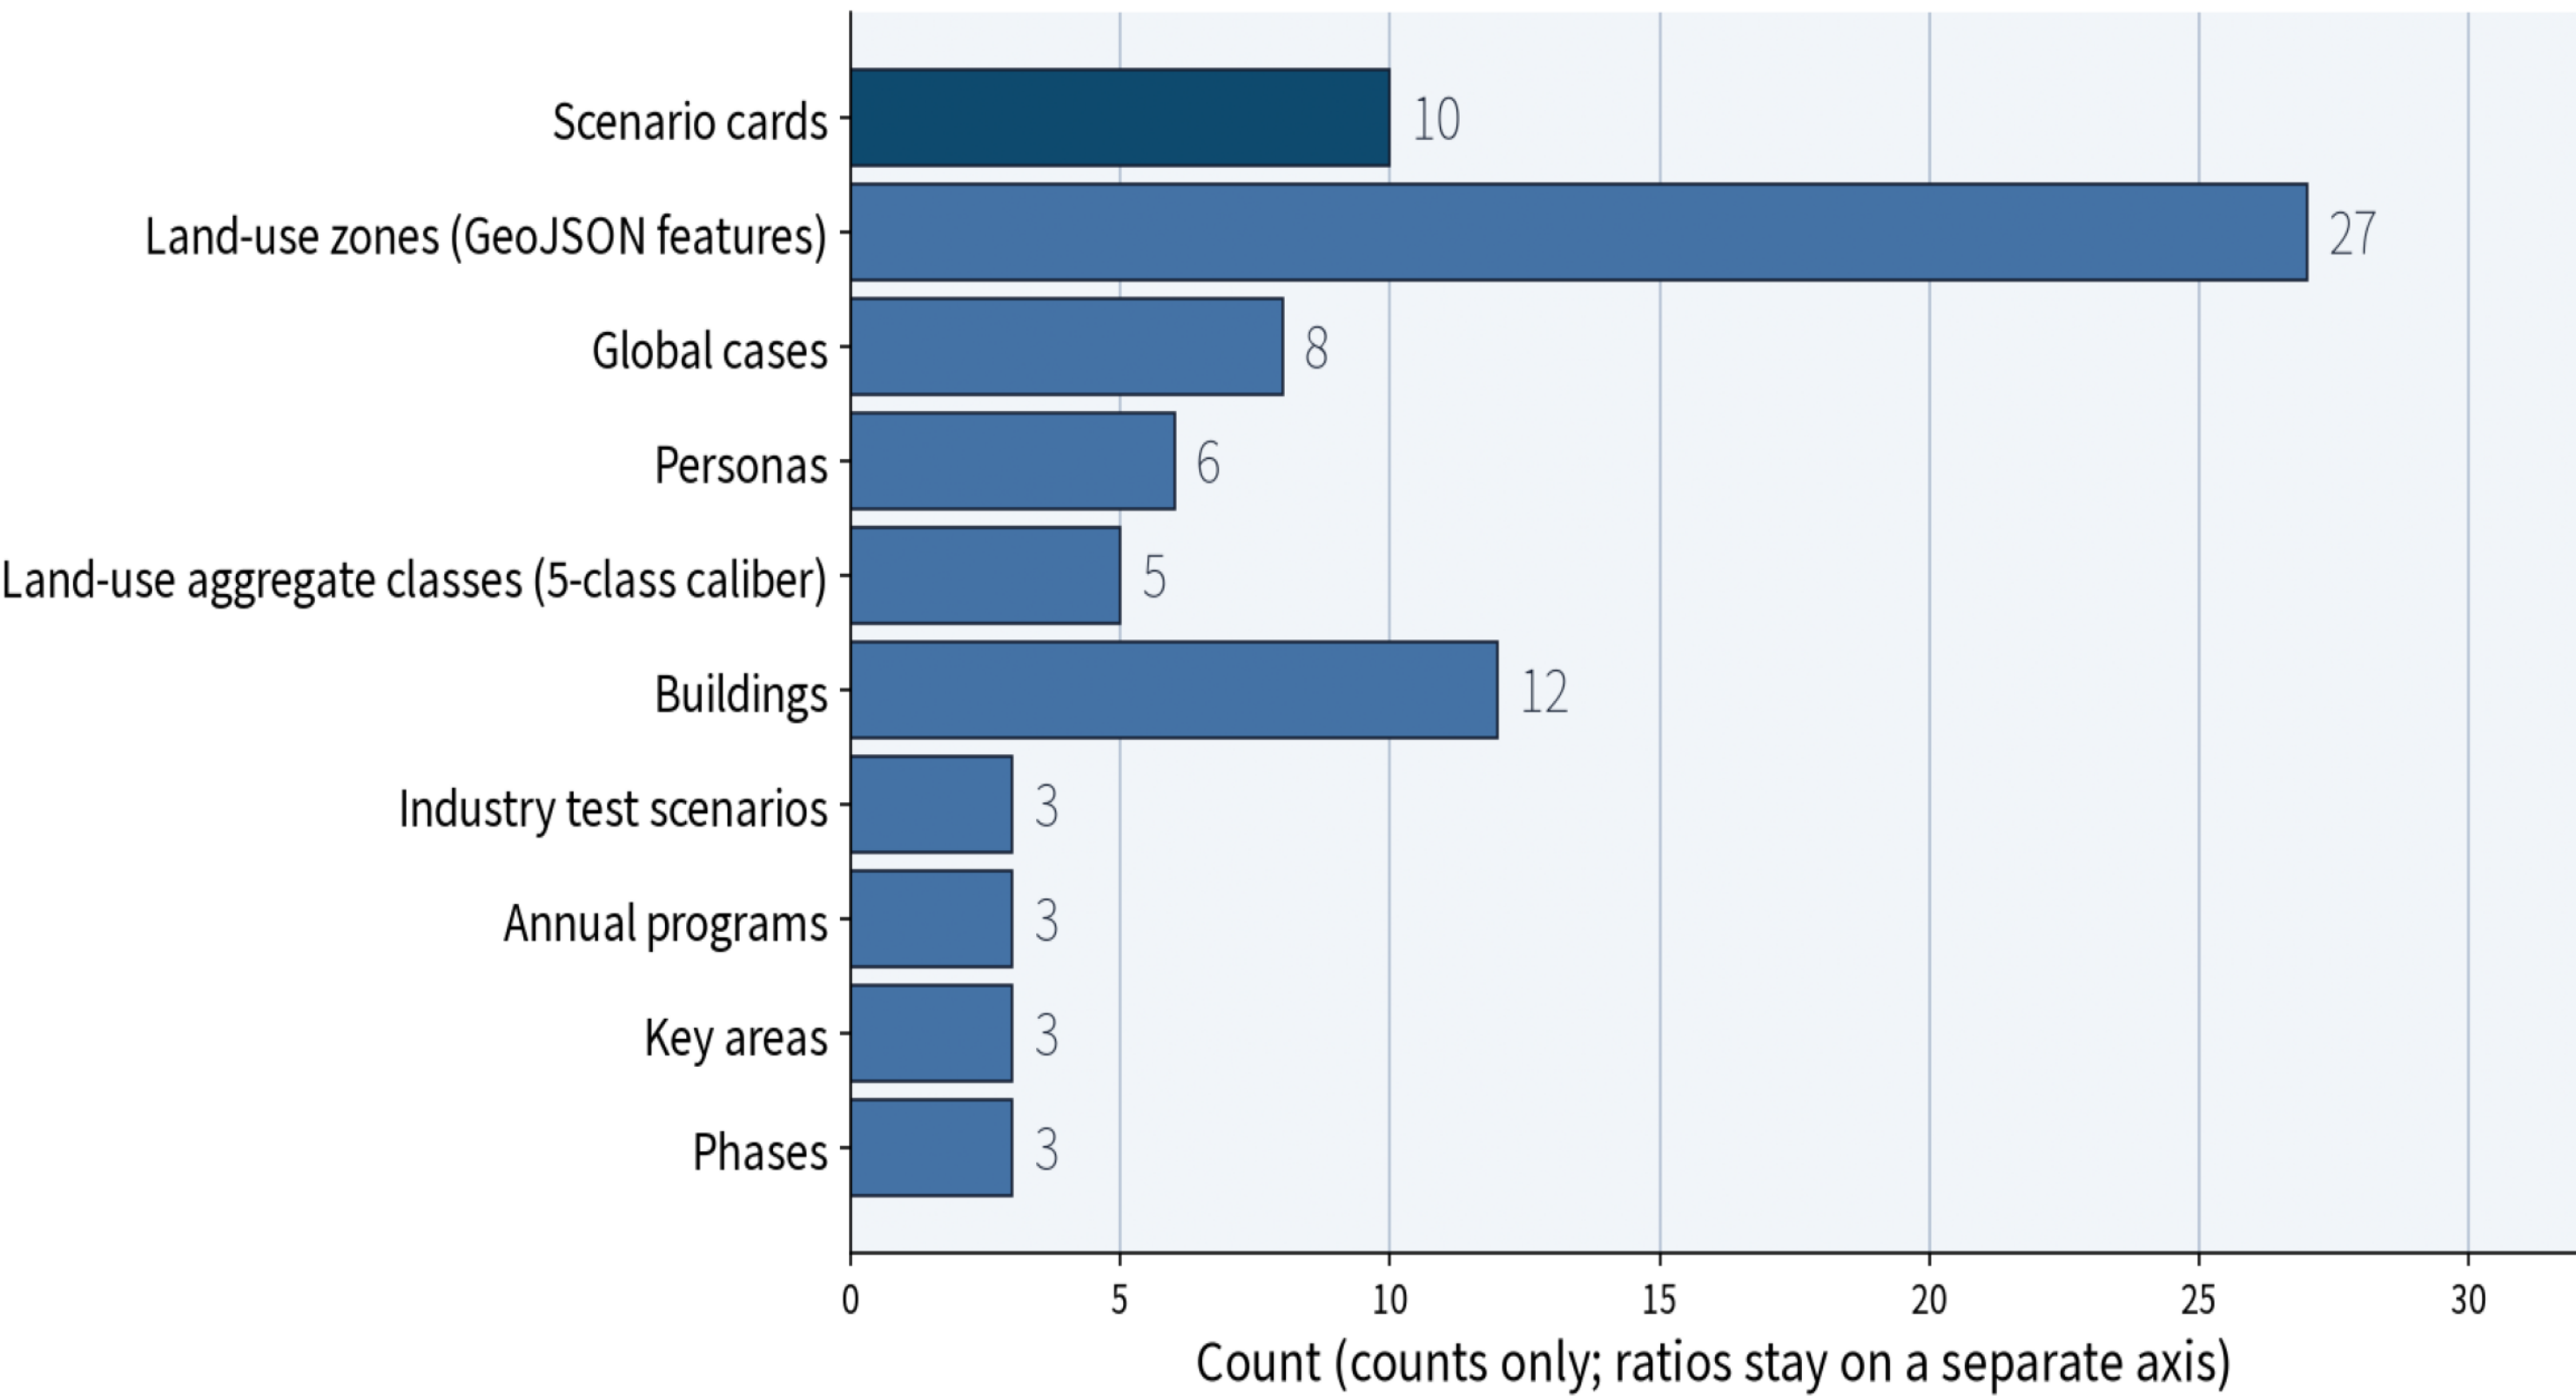

Provisional concept boundaries - not official redlines - recompute after official data release

Three-level scope (announcement): coordinated ~43.6 km² | overall design ~11.4 km² | key areas ~368.4 ha

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)
Single-caliber land-use: Research (0802) ~33%, Park & green (1401) ~21%, Business & finance (0902) ~19%, Commercial (0901) ~15%, Urban residential (0701) ~10% (27 GeoJSON zones aggregated into 5 classes)
Core metrics evidence (count axis only, aligned with metrics.json)

Four flows in closed loops: compute scheduling | green-power direct supply | waste-heat recovery | data sandbox (all conceptual)

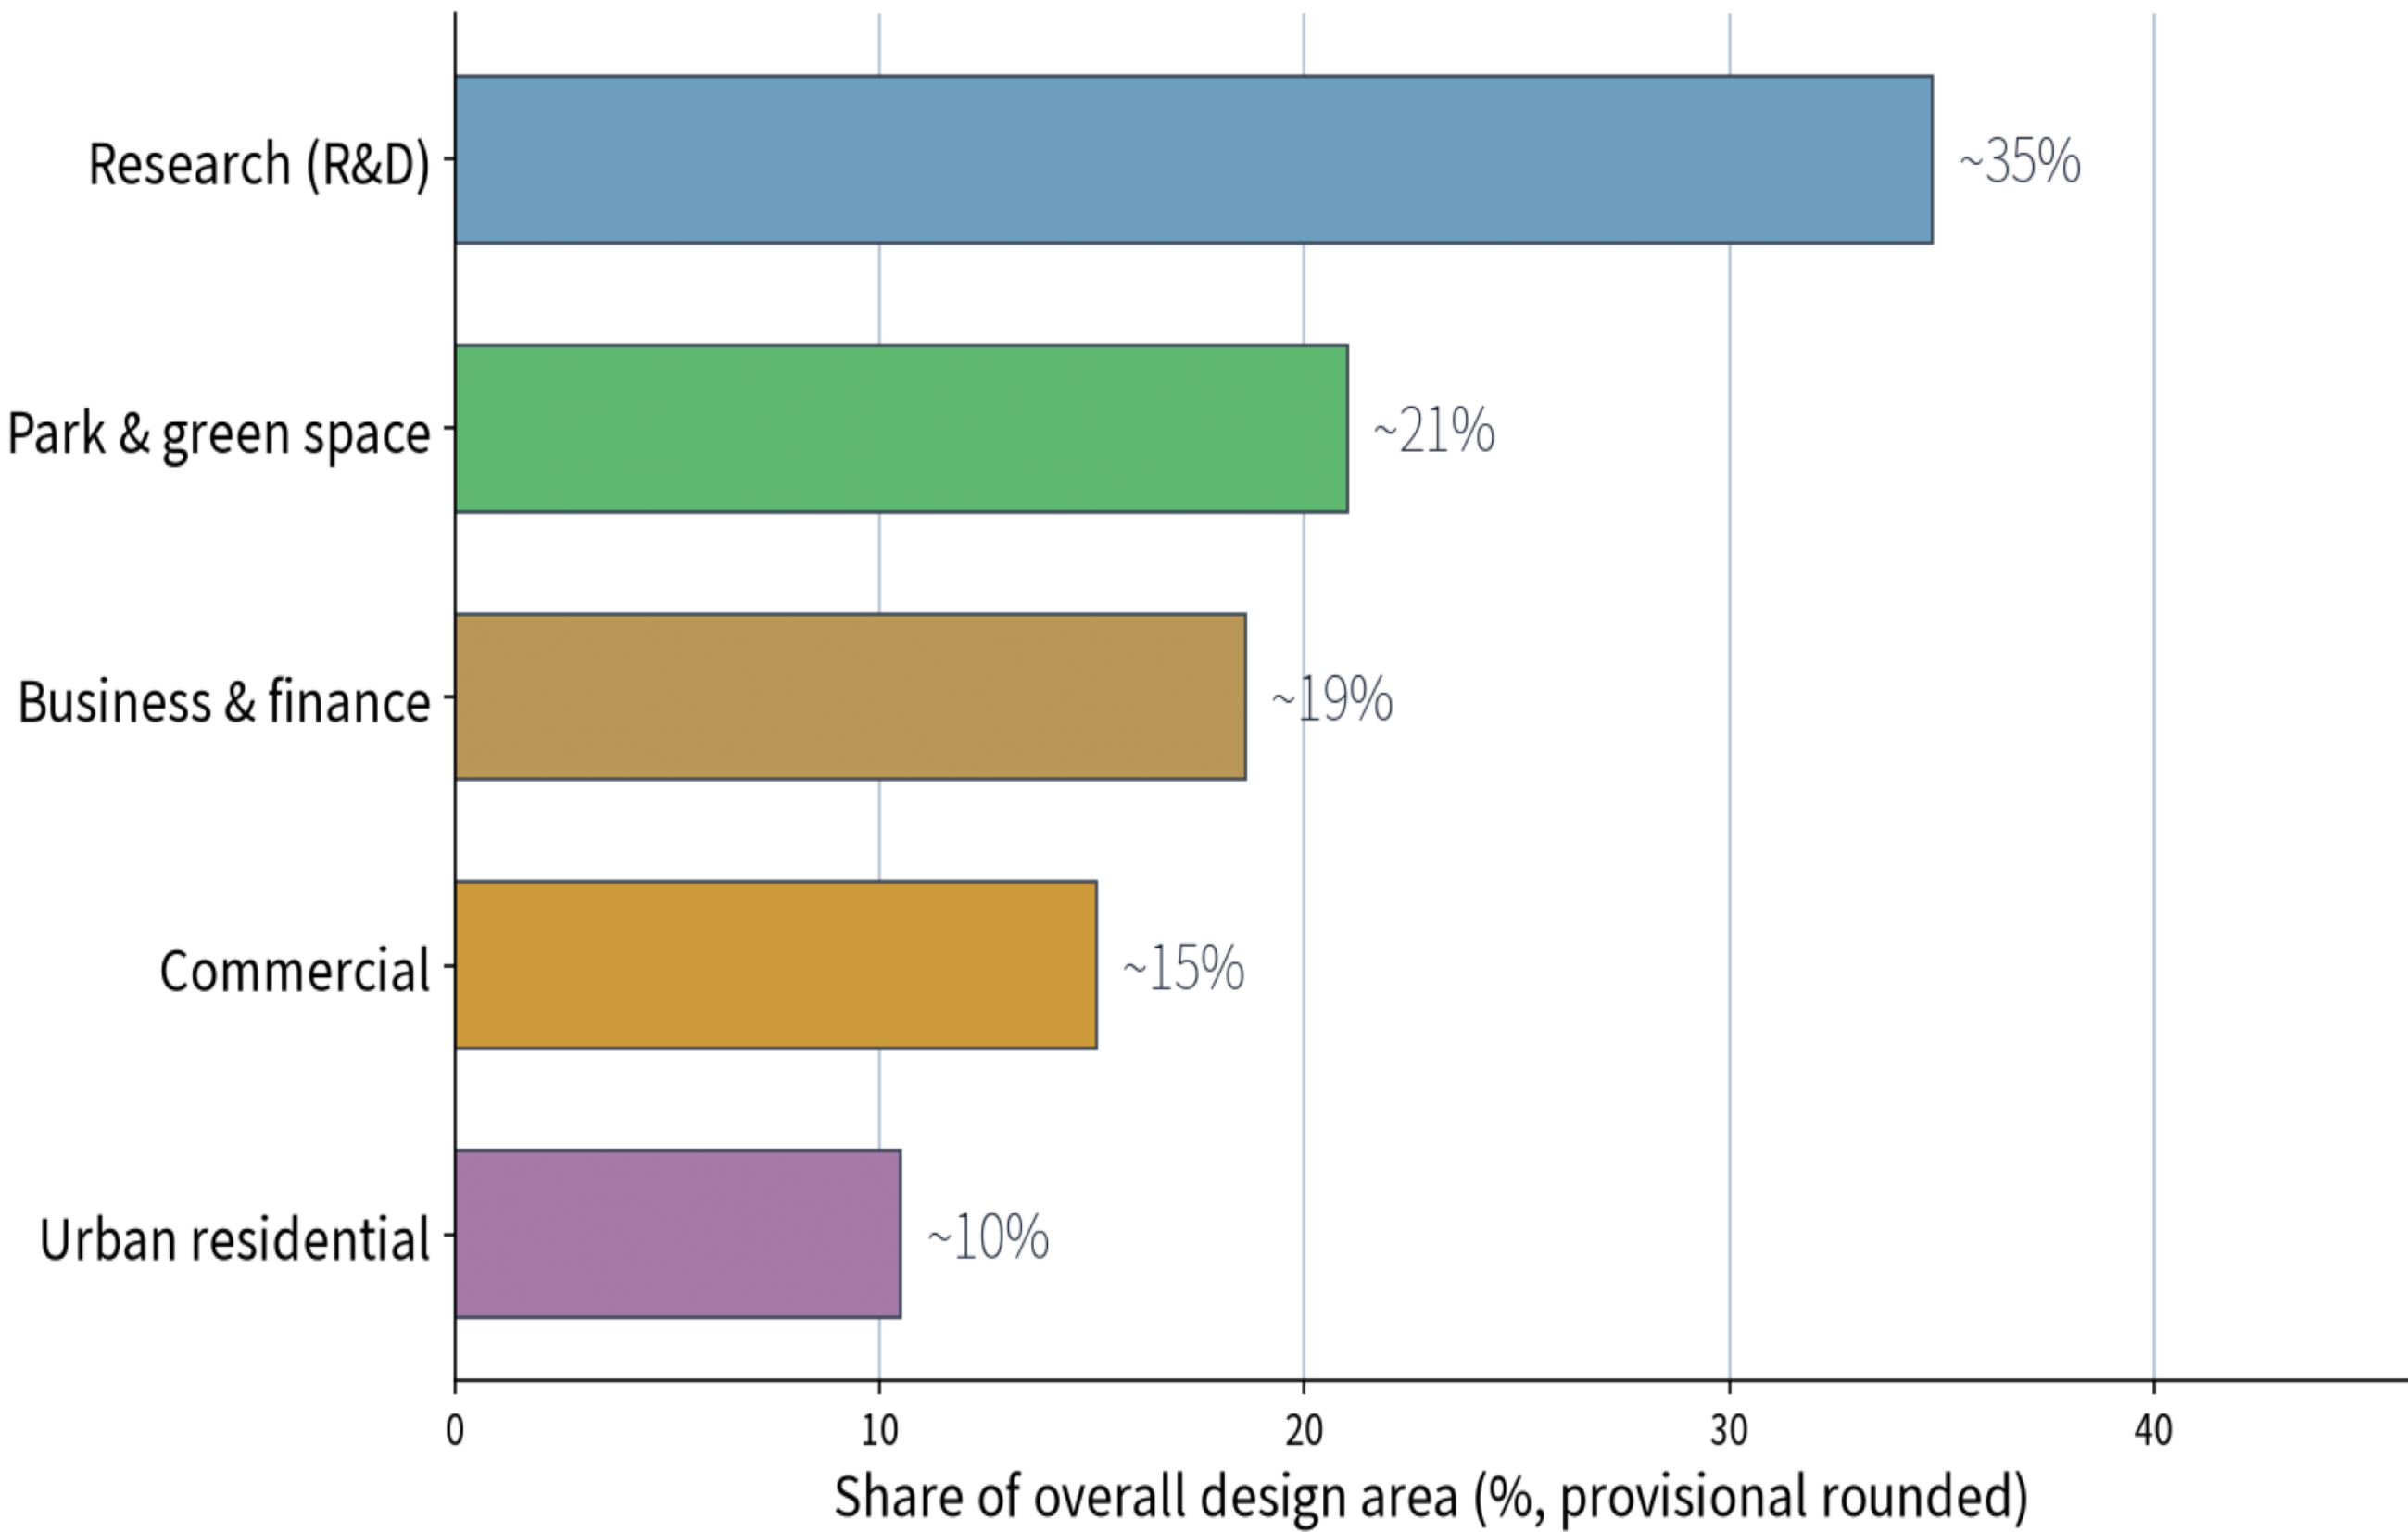

Caliber note: “27” = GeoJSON features in land_use.geojson; “5” = aggregated classes; different meanings, never interchangeable. Formal area metrics live in metrics.json, not on this count axis.

Provisional concept boundaries - not official redlines - recompute after official data release

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Conceptual land-use structure (single caliber: 5 aggregated classes)

27 land-use zones (land_use.geojson features) aggregated into 5 classes per the current national classification; share_i = class area / site area; recomputed in EPSG:4548; low confidence; shares rounded

Provisional concept boundaries - not official redlines - recompute after official data release

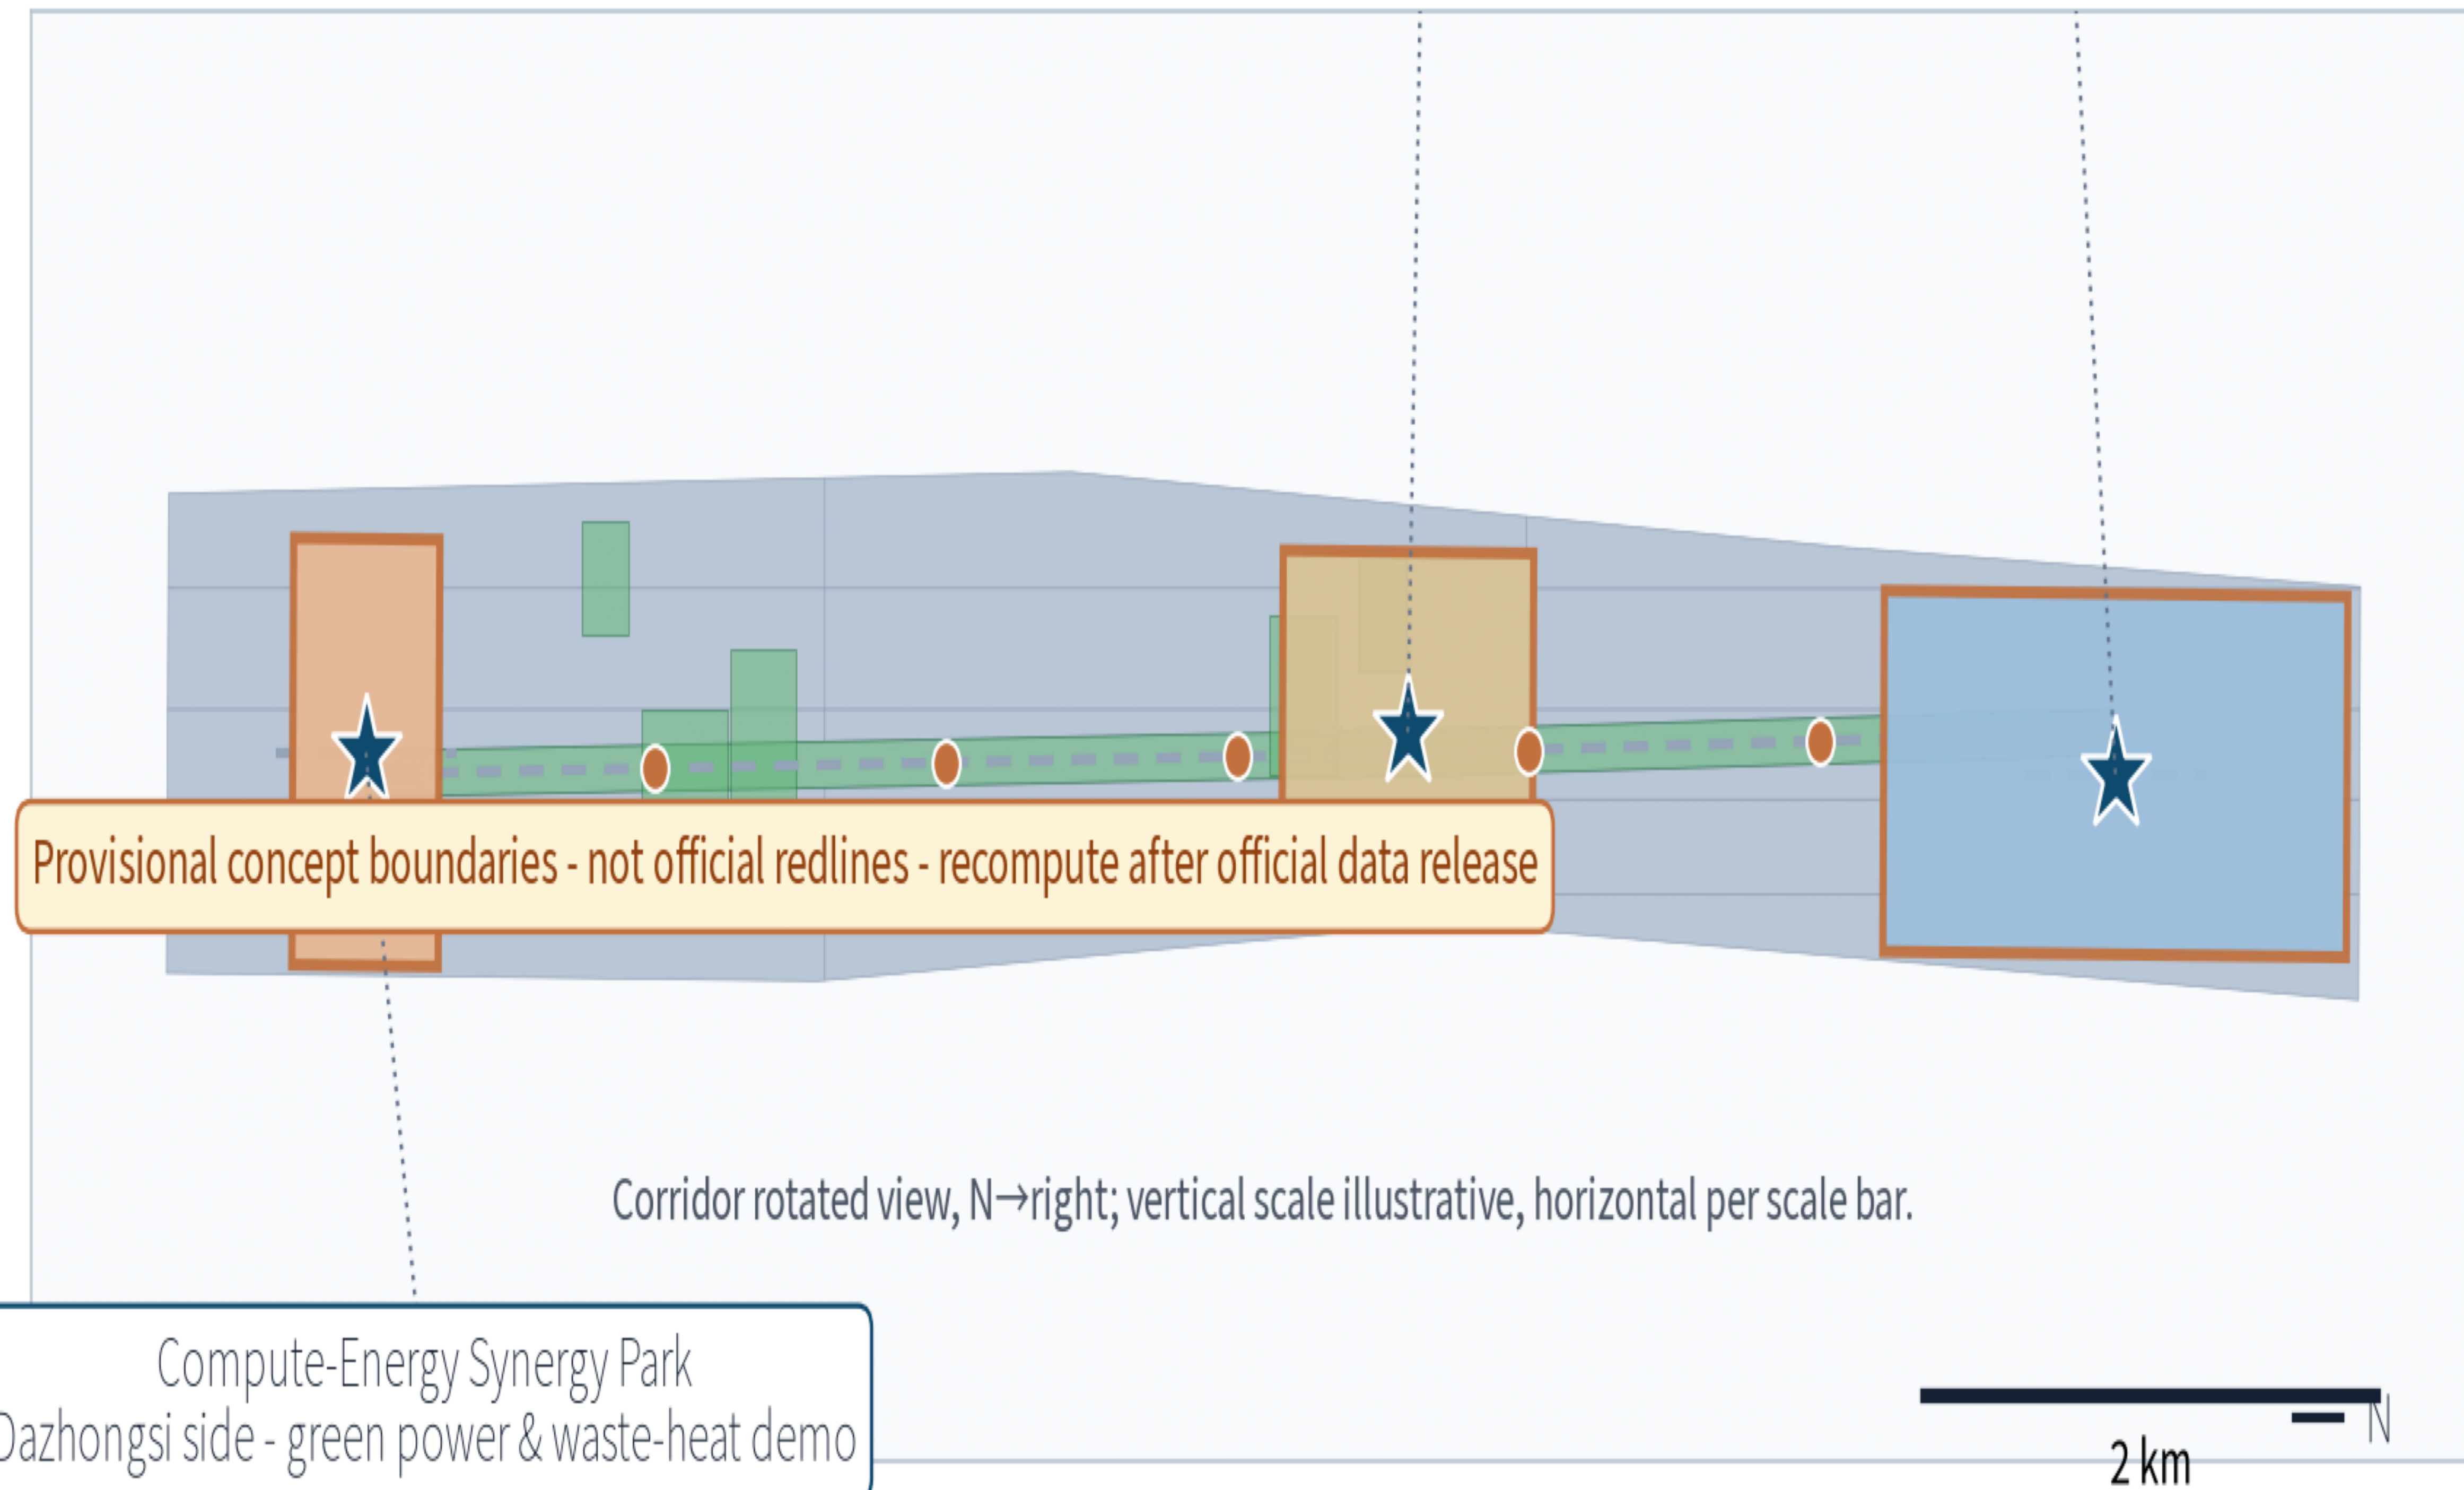

Three-node index and design tasks | Slow-mobility & blue-green analysis

Key-area detailed design | slow-mobility & blue-green (concept)

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Three-node index and design task map (key-area detailed design; corridor rotated view, N→right)

Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (announcement); this package is a provisional sub-scope

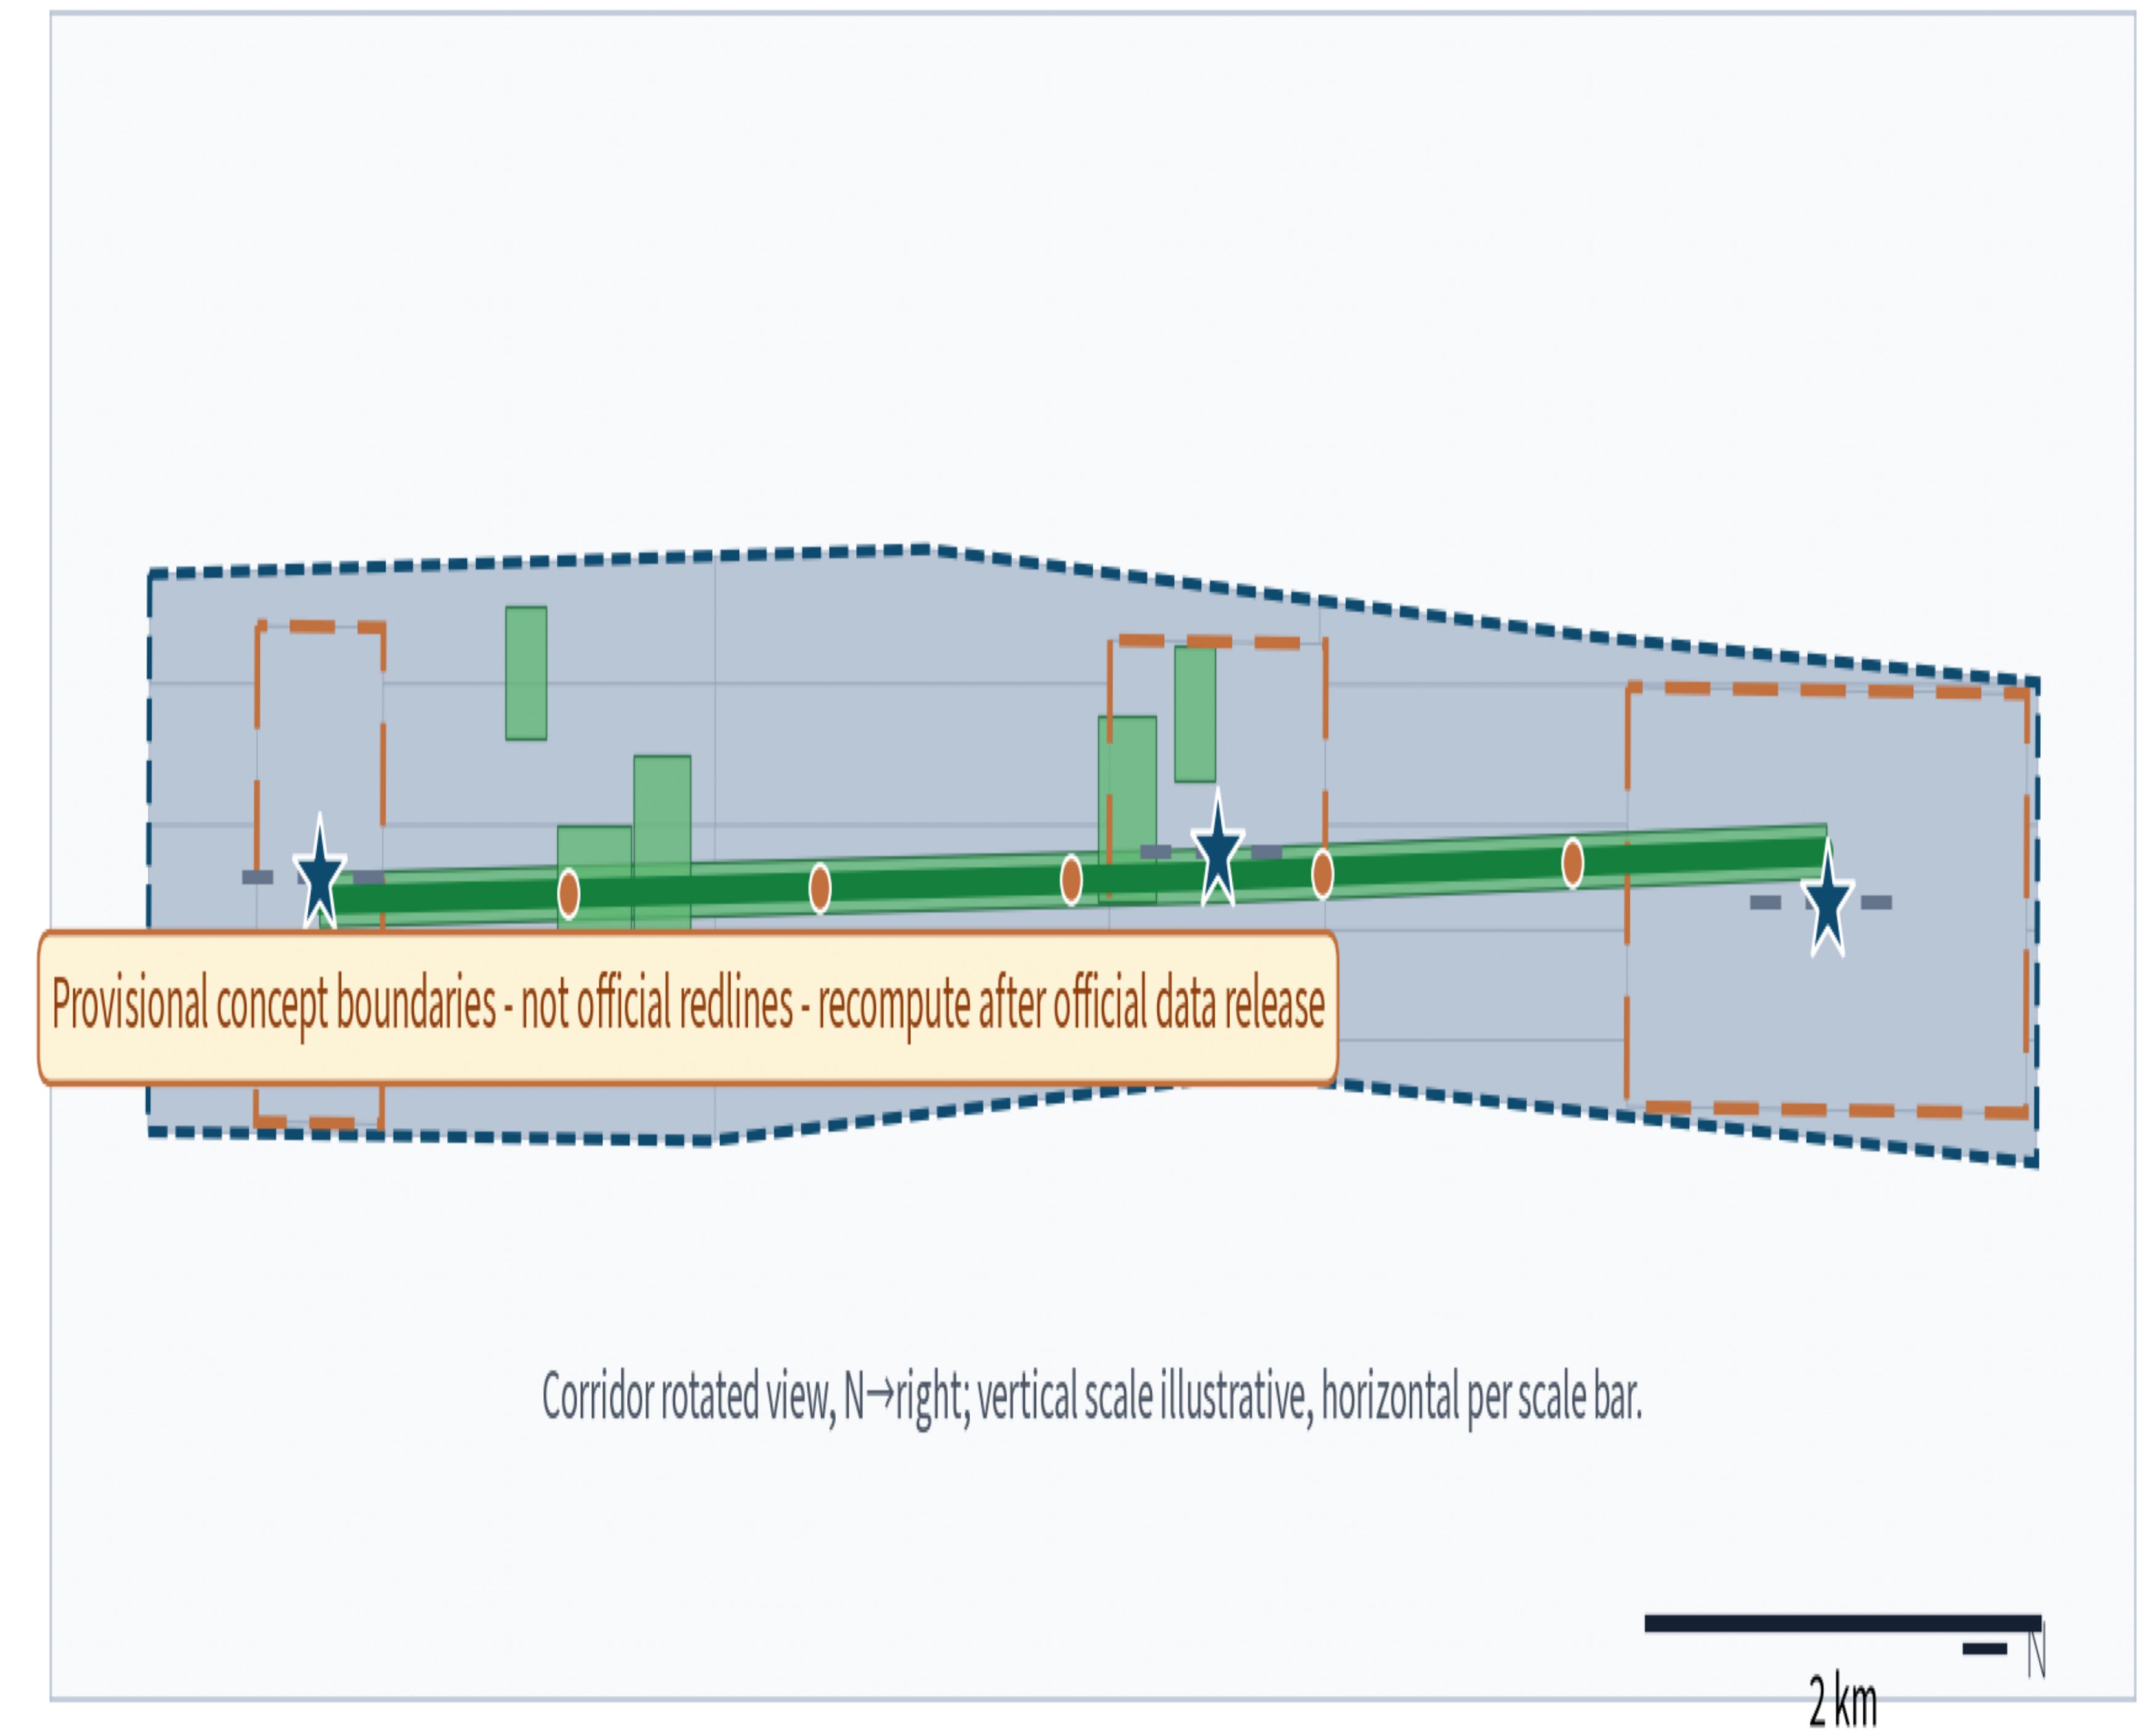

- Smart Compute Hub (Zhongzhiyuan side)
- Edge Intelligence Station (AI Origin side)
- Compute-Energy Synergy Park (Dazhongsi side)
- Cultural-tourism landmarks (3)
- AI scenario nodes (5)
- Park & green space

Provisional concept boundaries - not official redlines - recompute after official data release

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

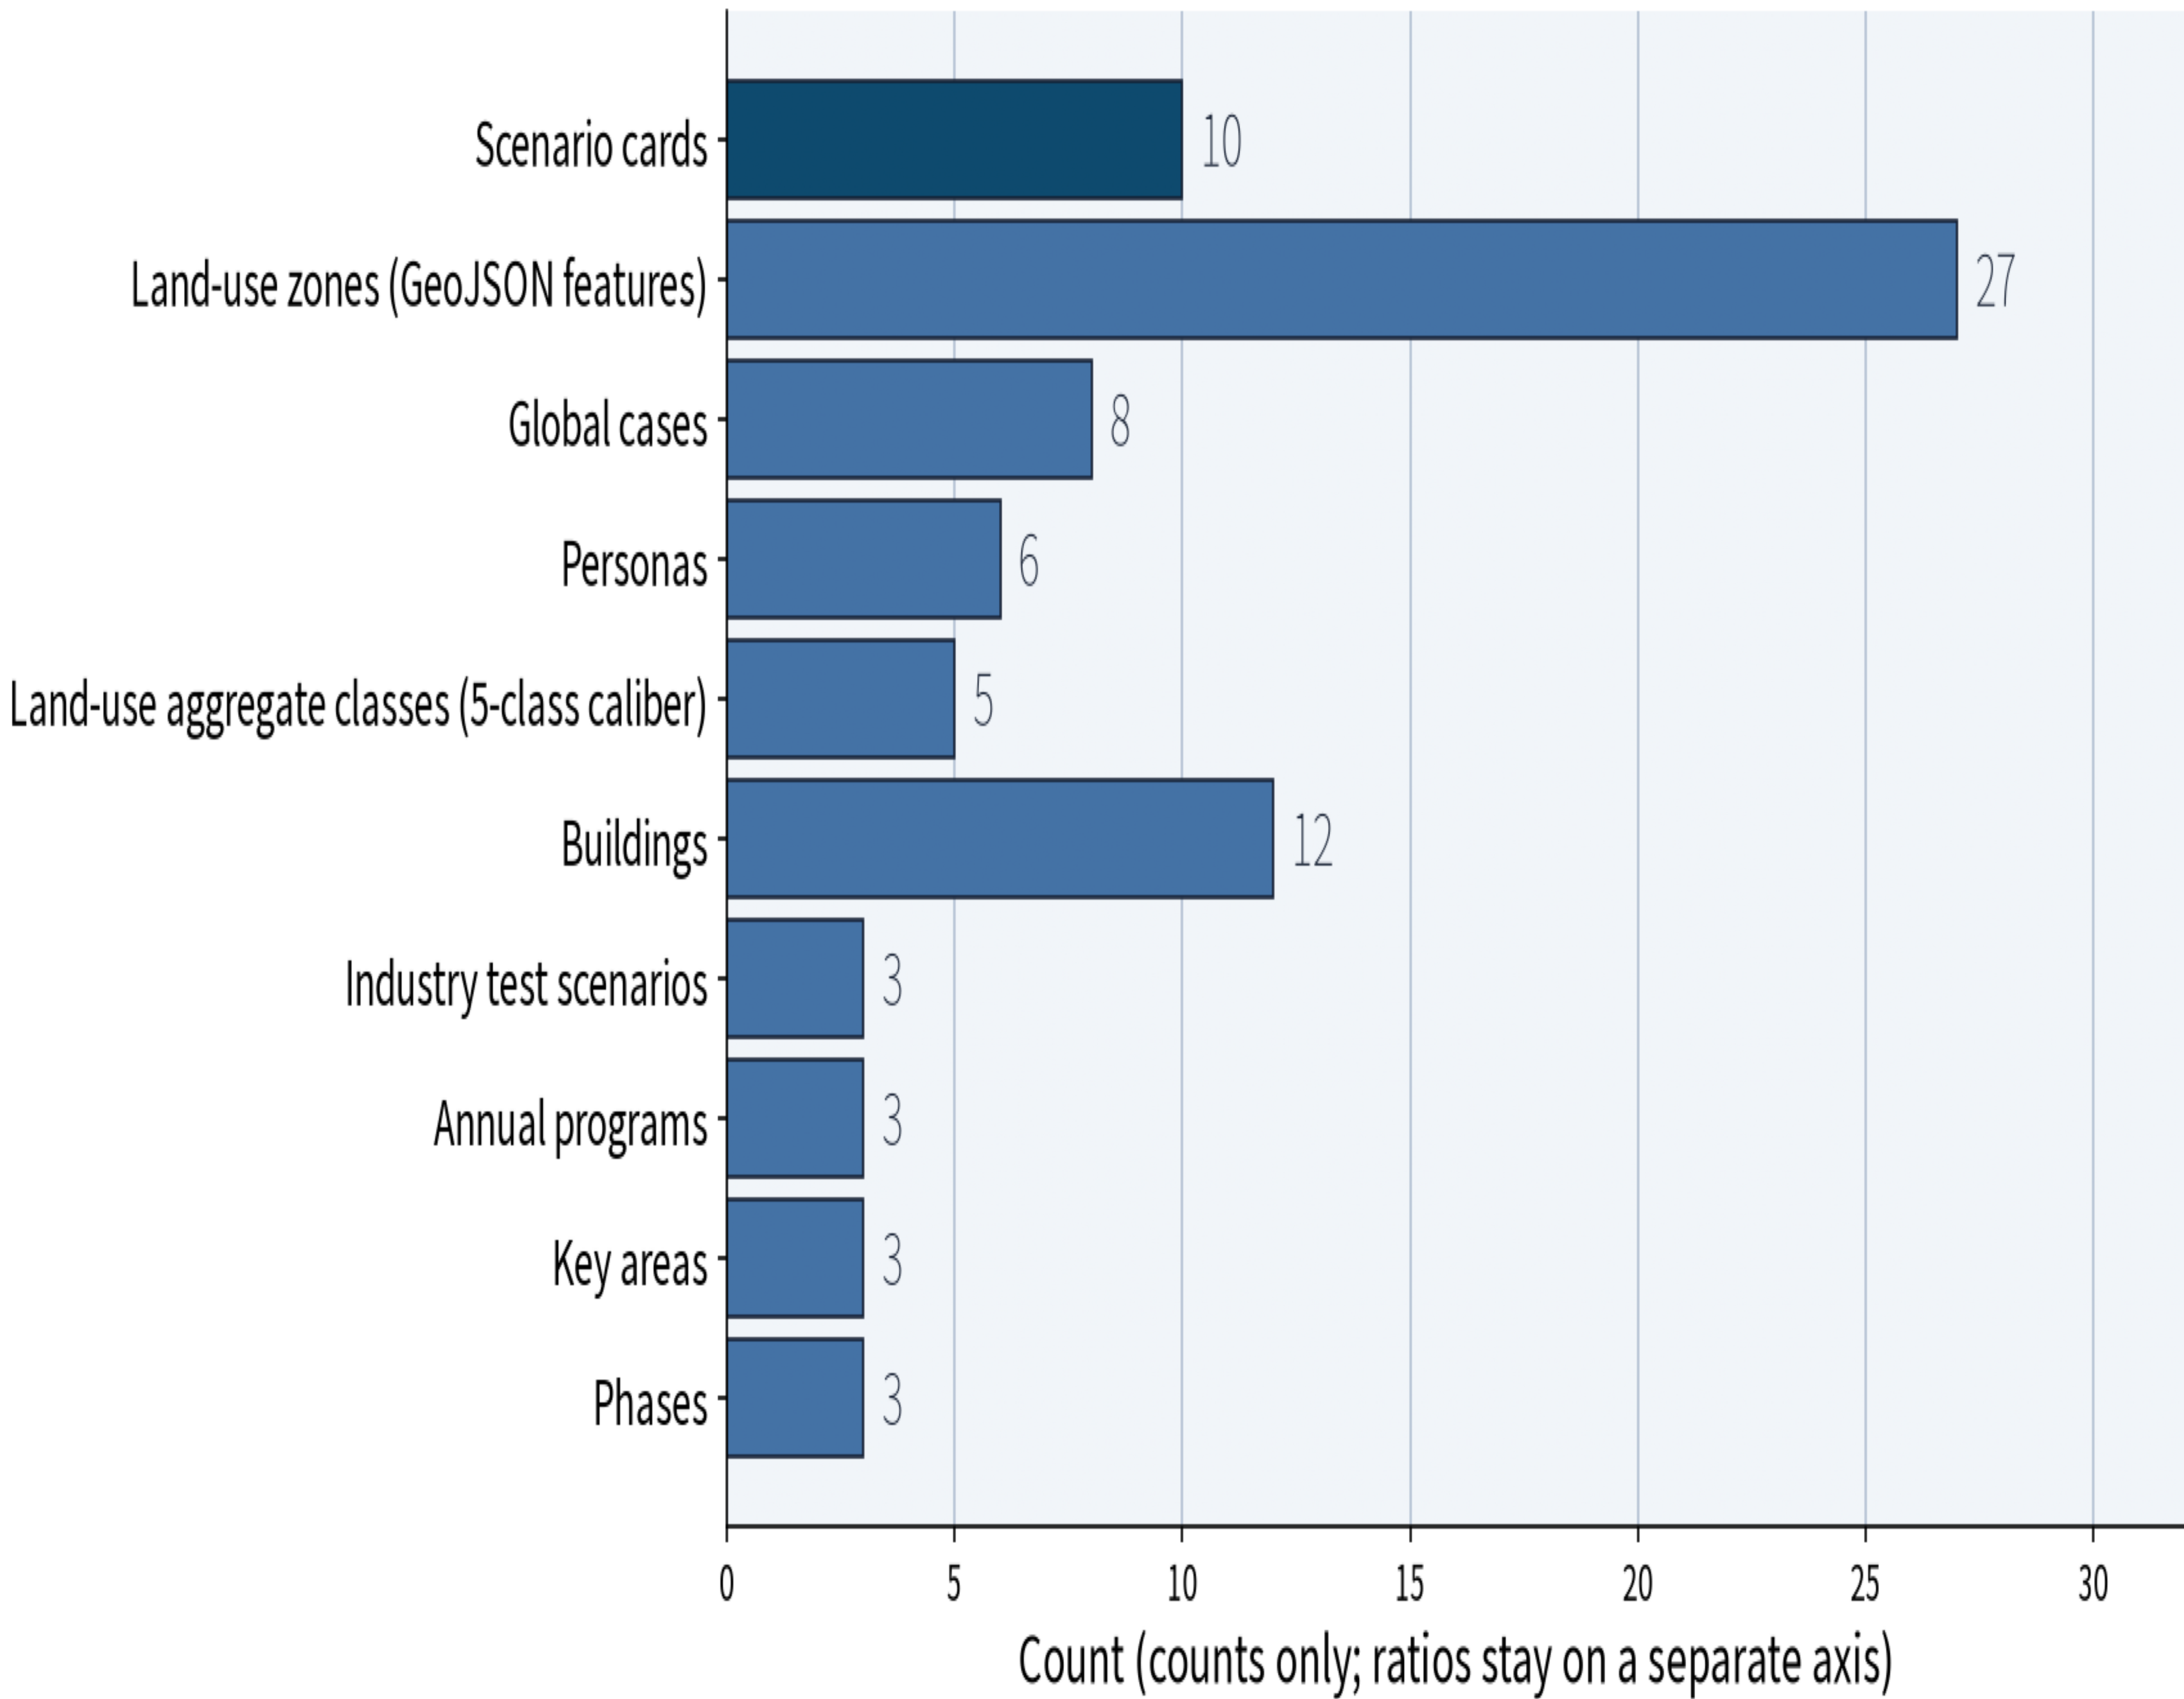

Slow-mobility & blue-green space analysis (concept spine + green corridors; corridor rotated view, N→right)

Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (announcement); this package is a provisional sub-scope

- Blue-green space (parks/corridors)
- Concept slow-mobility spine (along heritage park)
- Concept east-west connector links
- Overall design area (provisional)
- Cultural-tourism landmarks (3)
- AI scenario nodes (5)

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)
Core metrics evidence (count axis only, aligned with metrics.json)

Caliber note: “27” = GeoJSON features in land_use.geojson; “5” = aggregated classes; different meanings, never interchangeable. Formal area metrics live in metrics.json, not on this count axis.

Provisional concept boundaries - not official redlines - recompute after official data release

Provisional concept boundaries - not official redlines - recompute after official data release

Governance: Tri-node co-construction committee (concept); annual council; suggestion box + online disclosure + human reception

Annual budget categories: Ops / renovation / disclosure & science / community co-building / contingency (categories only)

Developer conversion: Voucher → shared pool → sandbox → test scenario → landing interface (concept chain)

Continuous KPIs: Disclosure timeliness, feedback closure, scenario usage, accessibility compliance (human-review basis)

Exit & recovery: Pilots below threshold suspend under written stop conditions and revert; no irreversible works
