

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy

Submission package no. 37 - concept suggestions & reference scheme (not a formal plan)

Three-level scope (announcement): coordinated research ~43.6 km² | overall design ~11.4 km² | key areas ~368.4 ha; this package's geometry is a provisional sub-scope.

Main line: Compute-Energy Loop - Smart Compute Hub (Zhongzhiyuan) • Edge Intelligence Station (AI Origin Community) • Compute-Energy Synergy Park (Dazhongsi), forming a three-node, one-loop network.

Four flows in closed loops: compute scheduling, green-power direct supply, waste-heat recovery, data sandbox; all mechanisms are conceptual and fully recomputed after official data release.

Provisional concept boundaries - not official redlines - recompute after official data release

Overall design scope overview / Land-use structure

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Overall design scope overview (three nodes & one loop network; corridor rotated view, N→right)

Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (announcement); this package is a provisional sub-scope

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Conceptual land-use structure (single caliber: 5 aggregated classes)

27 land-use zones (land_use.geojson features) aggregated into 5 classes per the current national classification; share_i = class area / site area; recomputed in EPSG:4548; low confidence; shares rounded

Provisional concept boundaries - not official redlines - recompute after official data release

Three-node index and design tasks / Core metrics evidence

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Three-node index and design task map (key-area detailed design; corridor rotated view, N→right)

Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (announcement); this package is a provisional sub-scope

Smart Compute Hub
Zhongzhiyuan side - city-level smart-compute cluster

Edge Intelligence Station
AI Origin Community side - edge compute & inference

Smart Compute Hub (Zhongzhiyuan side) Compute-Energy Synergy Park (Dazhongsi side) AI scenario nodes (5)

Edge Intelligence Station (AI Origin side) Cultural-tourism landmarks (3) Park & green space

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Core metrics evidence (count axis only, aligned with metrics.json)

Caliber note: "27" = GeoJSON features in land_use.geojson; "5" = aggregated classes; different meanings, never interchangeable. Formal area metrics live in metrics.json, not on this count axis.

Provisional concept boundaries - not official redlines - recompute after official data release

Slow-mobility & blue-green analysis / Brand logo

CMP • JZ Compute-Energy Loop: AI Compute Infrastructure & Compute-Energy Synergy (Concept)

Slow-mobility & blue-green space analysis (concept spine + green corridors; corridor rotated view, N→right)
Coordinated research ~43.6 km² | Overall design ~11.4 km² | Key areas ~368.4 ha (announcement); this package is a provisional sub-scope

- Blue-green space (parks/corridors)
 - Concept slow-mobility spine (along heritage park)
 - Concept east-west connector links
 - Cultural-tourism landmarks (3)
- Provisional concept boundaries - not official redlines - recompute after official data release
