

THE PAUSE LINE

JINGZHANG PAUSE: WRITING THE RIGHT TO PAUSE INTO THE AI CITY

OPEN-CALL AI URBAN DESIGN / CANONICAL PROVISIONAL GEOMETRY

Writing the right to pause into the AI city

One Pause Line • Three Stops • Two feedback wings • Four dwell durations

Overview map / 12 pause nodes

30 sec

See system status
Find a non-AI route

3 min

Sit, drink, toilet
charge, shade, ask a person

30 min

Learn, repair, care
translate, navigate rights

3 hours

Supervised testing
pause, exit, review

Dashed frames use canonical provisional geometry. Nodes are concepts, not approvals, redlines, or delivery commitments.

Not another technology promenade

Three planning scales become a six-cell framework, reorganised around everyday public access

Land-use framework / shared-edge topology

43.6 km²

Research: ecosystem & institutions

c. 11.4 km²

Overall design: network & renewal

368.4 ha

Key areas: three stop typologies

LINE

continuous baseline services

3 STOPS

calibrate / co-create / handover

2 WINGS

industry / community feedback

The land-use layer is a complete conceptual partition. Statutory use, intensity, ownership, and scale await official data and professional review.

Three Stops: Calibrate, Co-create, Handover

Turn key areas from industry labels into accessible, pausable, accountable city interfaces

01 CALIBRATION

Zhongzhiyuan

safety evaluation • repair depot • governance lounge • garden

Pause Button Milestone

02 CO-CREATION

Beijing AI Origin

open-source library • quiet studio • talent desk • accessible co-test

Open-source Bench

03 HANDOVER

Dazhongsi typology

human handover • consumer rights • night arrival • service warranty

Human Handover Bell

Geometry warning: all three polygons are provisional. Issue #1029 reports PROV-KEY-003 about 2.26 km from Dazhongsi Station; this is a typology, not a location claim.

Support the body before celebrating intelligence

Slow mobility, green-blue public space, and essential services become one pause infrastructure

Slow mobility + green-blue public space

BODY

seating / shade / water / toilets

MOVE

accessibility / cycling / transfer / non-AI route

DIGITAL

charging / status light / minimal data / exit

HUMAN

help / repair / rights / emergency handover

Continuity is not proof of accessibility. Slopes, crossings, lighting, redlines, and utilities require field and engineering verification.

Metrics are recalculable assumptions, not promises

Geometry → metrics → narrative → static exhibit → review, with one source of truth

11.41 km²

provisional overall-design area

5.2%

conceptual green ratio

2.2%

pause public-space ratio

16.1 km

conceptual slow links

12 / 4

scenario cards / test scenarios

6 / 3

personas / pilgrimage landmarks

Recalculable: boundary, green, public space, footprints, routes, phases, and counts

Pending: official polygons, controls, ownership, utilities, heritage, fire, FAR, and floor area

Self-check status at figure generation: pending. Final status is the repository scripts plus manifest hashes.
