

AI Spine · Jingzhang AI Innovation Belt

Intelligent Rebirth of a Century-Old Railway

Master Concept Overview

This proposal transforms the century-old Jingzhang Railway corridor into an AI-native urban spine, linking three innovation vertebrae — Zhongzhiyuan AI Acceleration Area, Beijing AI Origin Community, and Dazhongsi AI Industry Cluster. The design concept follows a "One Spine, Three Vertebrae, Two Wings" framework, integrating heritage preservation with AI-driven urban regeneration.

Key Metrics

Metric	Value	Source
Coordination Research Area	43.6 km²	site_boundary.geojson
Overall Design Area	11.4 km²	site_boundary.geojson
Key Areas Total	3.68 km²	key_areas.geojson
Green Ratio	12.34%	green_space / site_boundary
Public Space Ratio	7.33%	public_space / site_boundary
Building Count	5	buildings.geojson
Road Segments	5	roads.geojson
Scenario Count	12	proposal.md

Three-Tier Scope Framework & Spatial Structure

The proposal establishes a three-tier working framework: a coordination research area (43.6 km²) for regional context, an overall design area (11.4 km²) for master planning, and key detailed design areas (3.68 km²) focused on three innovation nodes. The spatial structure follows an "I-shaped" (■■■) blue-green spine with three cores and two wings.

Fig. 02 — Three-Tier Scope & Spatial Structure

Land Use Structure

Land Use Category	Code	Area (ha)	Percentage
Residential	R	85.2	7.5%
Commercial & Business Services	B	62.4	5.5%
Industrial (R&D;)	M	48.7	4.3%
Green & Open Space	G	140.7	12.3%
Transportation	S	56.3	4.9%
Public Management	A	31.8	2.8%
Heritage Corridor (Special)	E	72.4	6.4%

Three Key Areas — Detailed Design

Three key areas receive detailed design attention, each serving a distinct role in the AI innovation ecosystem: Zhongzhiyuan (garden-style full-stack innovation district), AI Origin Community (campus-adjacent tech transfer and talent housing), and Dazhongsi (urban intelligent economy and international exchange district).

Fig. 03 — Three Key Areas Detailed Design

AI Scene Nodes

Zone	AI Scene Nodes	Area
Zhongzhiyuan	AI Chip R&D; Cluster · Autonomous Vehicle Testing · Open-Source Innovation Platform · Intelligent Incubation Base · Qingke Sci-Tech Corridor	192.1 ha
AI Origin Community	University-Industry Collaborative Innovation Center · Technology Transfer Accelerator · Talent Housing · Innovation Showcase · Wudaokou Maker District	104.3 ha
Dazhongsi	AI Enterprise HQ Base · International Conference Center · Smart Commercial District · Urban AI Application Showcase · Rail Transit Hub Complex	72.0 ha

The mobility system integrates a perimeter slow-mobility loop (Ri-shaped), five TOD-oriented rail stations, and a blue-green network connecting the Jingzhang Heritage Park corridor with riverside greenways. Pedestrian-priority streets provide comprehensive coverage across the entire site.

Component	Description
Heritage Park Corridor	N-S axis along Jingzhang Railway, south from North 4th Ring Rd, ~800m wide
Qinghe Waterfront Corridor	Riverside greenway along Qinghe River (northern transverse)
Xiaoyue River Green Corridor	Linear green corridor along Xiaoyue River (mid-section)
Slow-Mobility Loop	Perimeter loop connecting North and South loops to 3rd Ring Road
TOD Nodes	5+ rail stations with transit-oriented development

Core Metrics & Evidence Chain

All quantitative claims in this proposal are traceable through an evidence chain: boundary GeoJSON data feeds into automated metric calculations, which inform the design proposal, and are verified against the compliance matrix. All area metrics are based on provisional boundary calculations and must be verified with official approval data.

Fig. 05 — Core Metrics & Evidence Chain

Evidence Chain Process

Step	Action	Output
1	Import provisional boundary (EPSG:4326)	GeoJSON boundary data
2	Auto-calculate area, perimeter, centroid	metrics.json (16 metrics)
3	Generate proposal based on metrics	proposal.md design rationale
4	Verify against requirements & constraints	compliance_matrix.json

Disclaimer: All area metrics are based on provisional boundary calculations and must be verified with official approval data.
