

MINIMUM-AUTH JINGZHANG

Identity appears only at a necessary step

The design object is not another no-login app. It is the identity threshold inside each public-service transaction. M0 is the default; M2/M3 may appear only after matter-specific confirmation by an accountable entity and legal review.

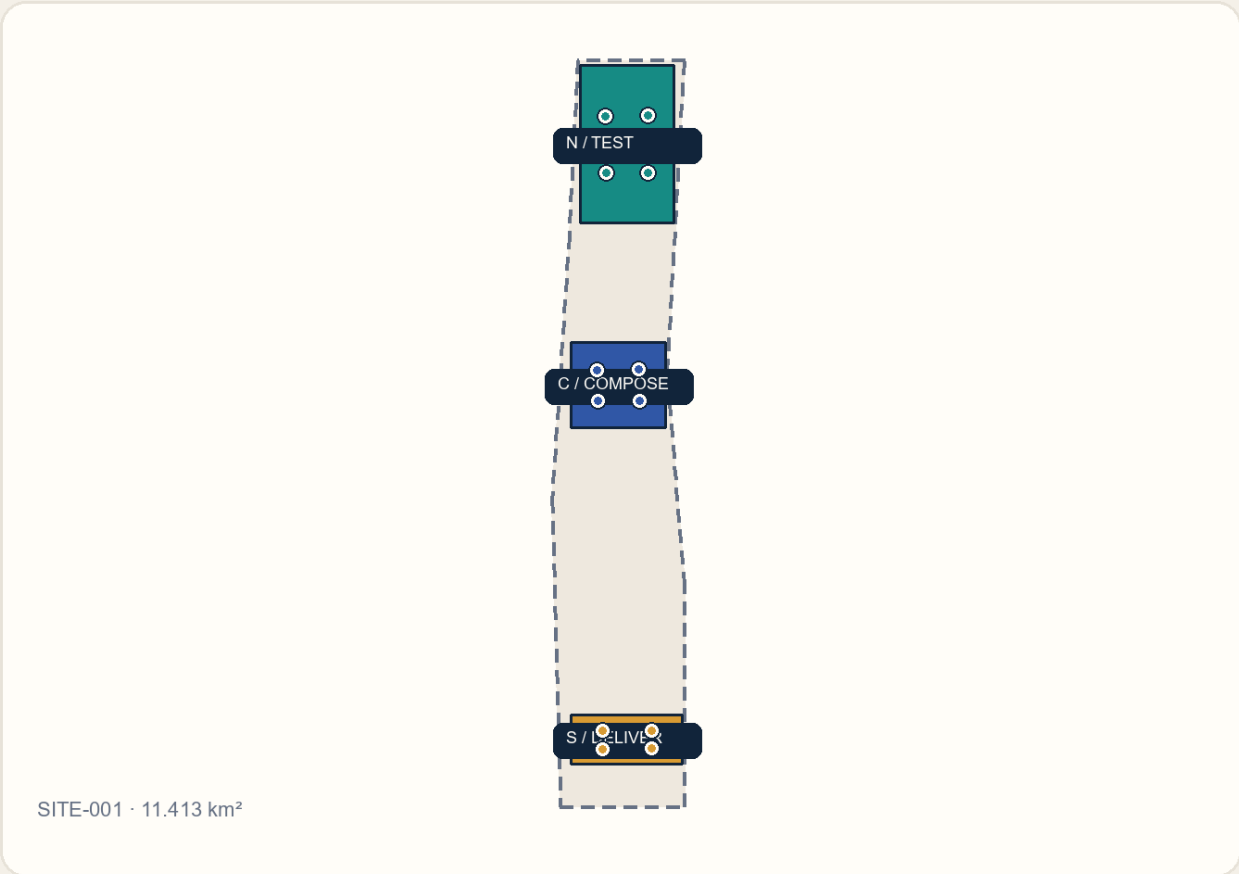

Question and evidence boundary

The open call states approximate textual scopes of 43.6 km², 11.4 km² and three key areas. Repository geometry is provisional. Derived areas and alignments are package calculations, never official boundaries.

FIG 01

Evidence before siting: overview map

Textual scopes, provisional geometry, participant design and matter-specific legal necessity remain visibly separate.

PROVISIONAL CONCEPT · NOT A REDLINE

01 / OFFICIAL TEXT

Approx. 43.6 km² research, 11.4 km² overall design and three key-area directions.

02 / PROVISIONAL

The site and three rectangles are temporary; public issues record location doubts.

03 / DESIGN

Twelve nodes and six reversible prototypes exist only for discussion and audit.

04 / DEPLOYMENT

Zero M2/M3 steps have matter-specific confirmation from an accountable entity and legal review.

MINIMUM-AUTH

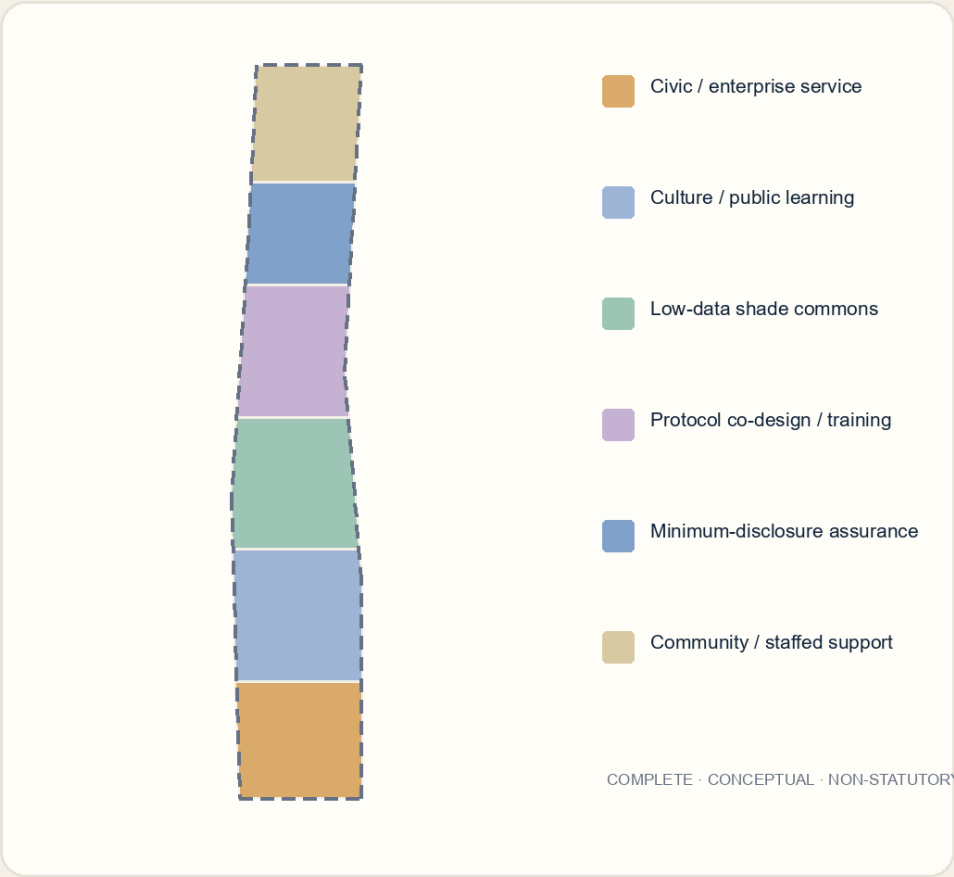

From land partition to threshold partition

Six conceptual bands organize transactions, learning, low-data commons, co-design, assurance and staffed support without pretending to know statutory controls. Identity levels are neither land-use classes nor law.

FIG 02

Land use is not the answer; the threshold section is

The complete partition exists for topology and recalculation. The real urban-design unit is a legible service journey.

PROVISIONAL CONCEPT · NOT A REDLINE

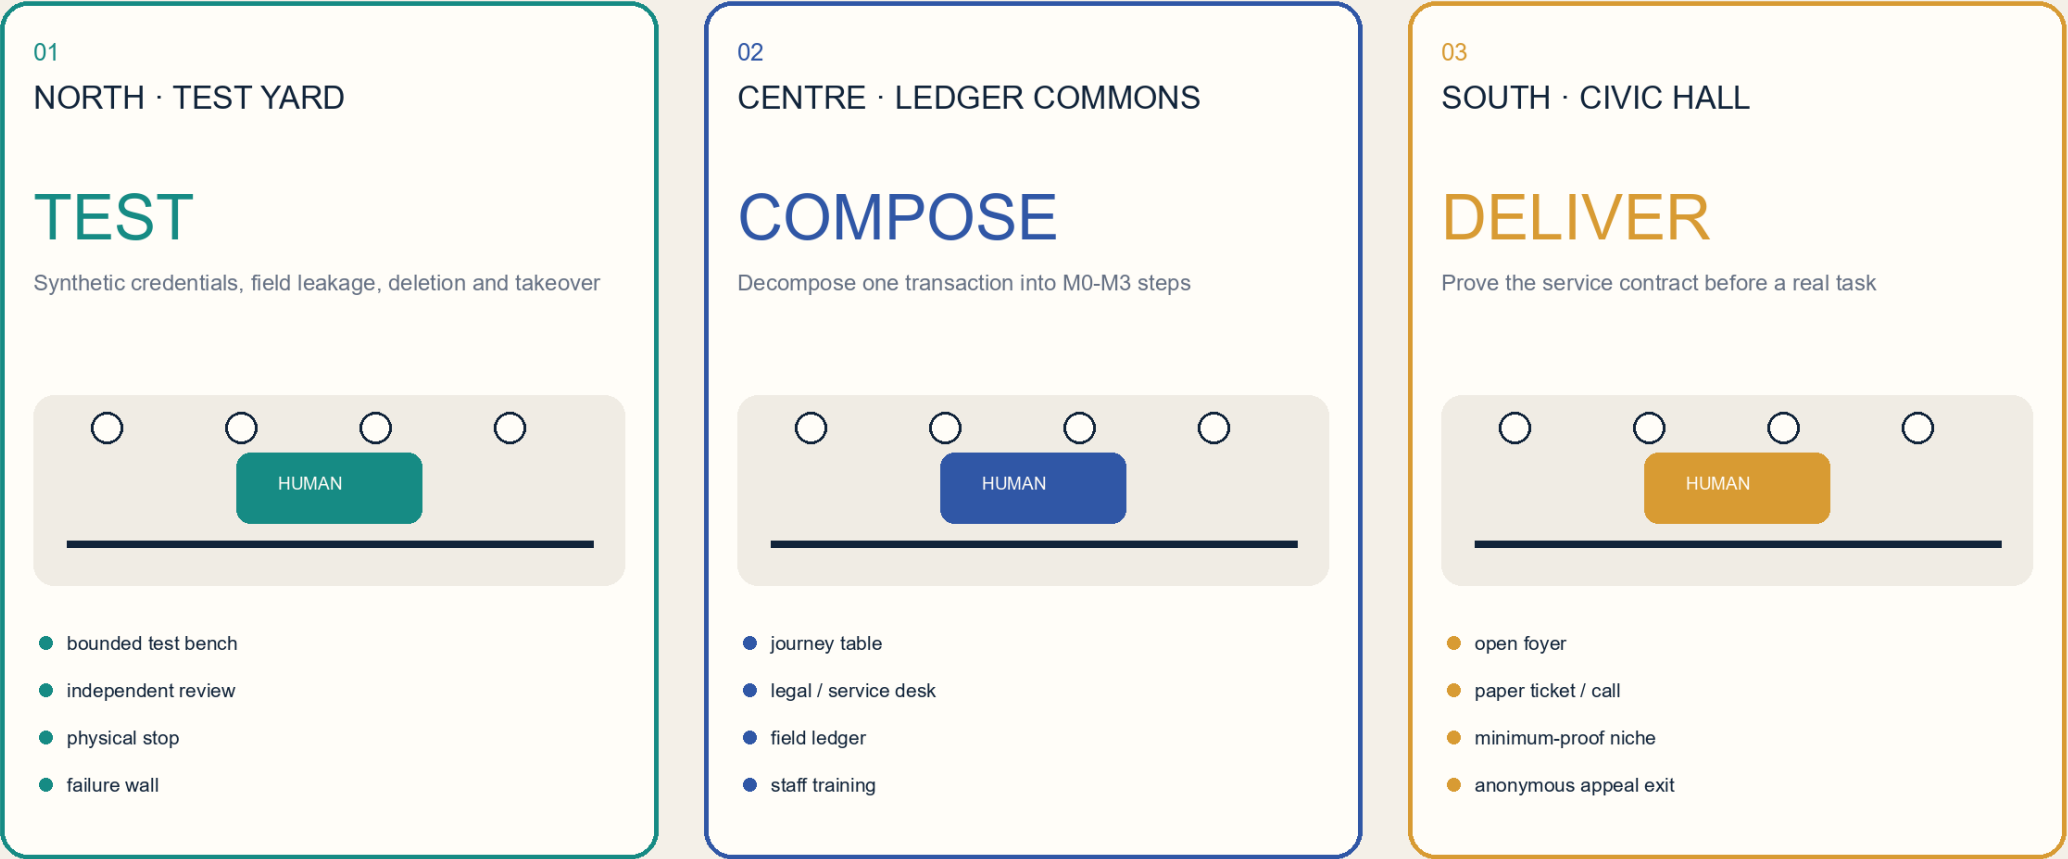

MINIMUM-AUTH

Three key areas: test, compose, deliver

The north tests synthetic credentials, leakage and deletion; the centre decomposes one transaction; the south compares staffed, paper and digital routes at one counter. Location, rights and delivery conditions remain unresolved.

FIG 03
Key areas: test, compose and deliver accountability

Three temporary rectangles express roles only. Each starts with staffed and paper service before digital identity is considered.

PROVISIONAL CONCEPT · NOT A REDLINE

MINIMUM-AUTH

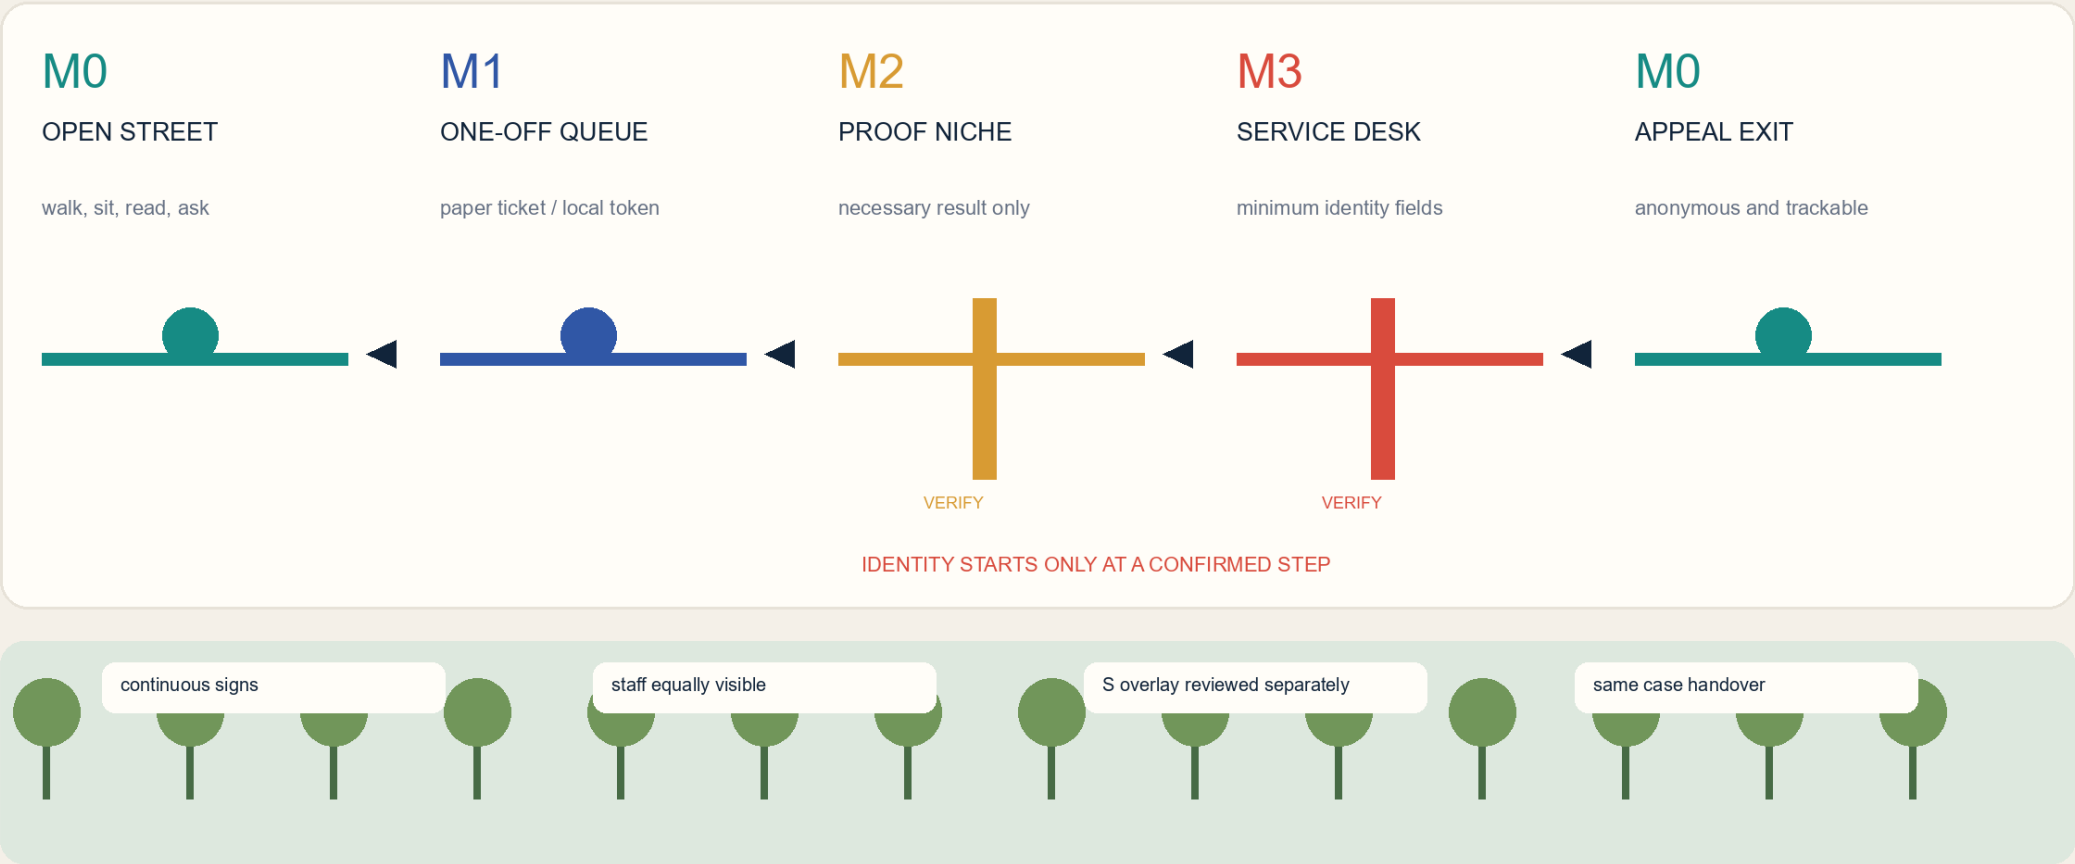

Public space before identification

Open walking links, a low-data commons and twelve small nodes form the spatial armature. Stopping a digital module must never stop movement, help, staffed, paper or mechanical service.

FIG 04

Walking and blue-green public space: identity is not a barrier

The section draws where identity may begin. Passage, advice, queueing and appeal stay at M0/M1; only confirmed acts reach M2/M3.

PROVISIONAL CONCEPT • NOT A REDLINE

MINIMUM-AUTH

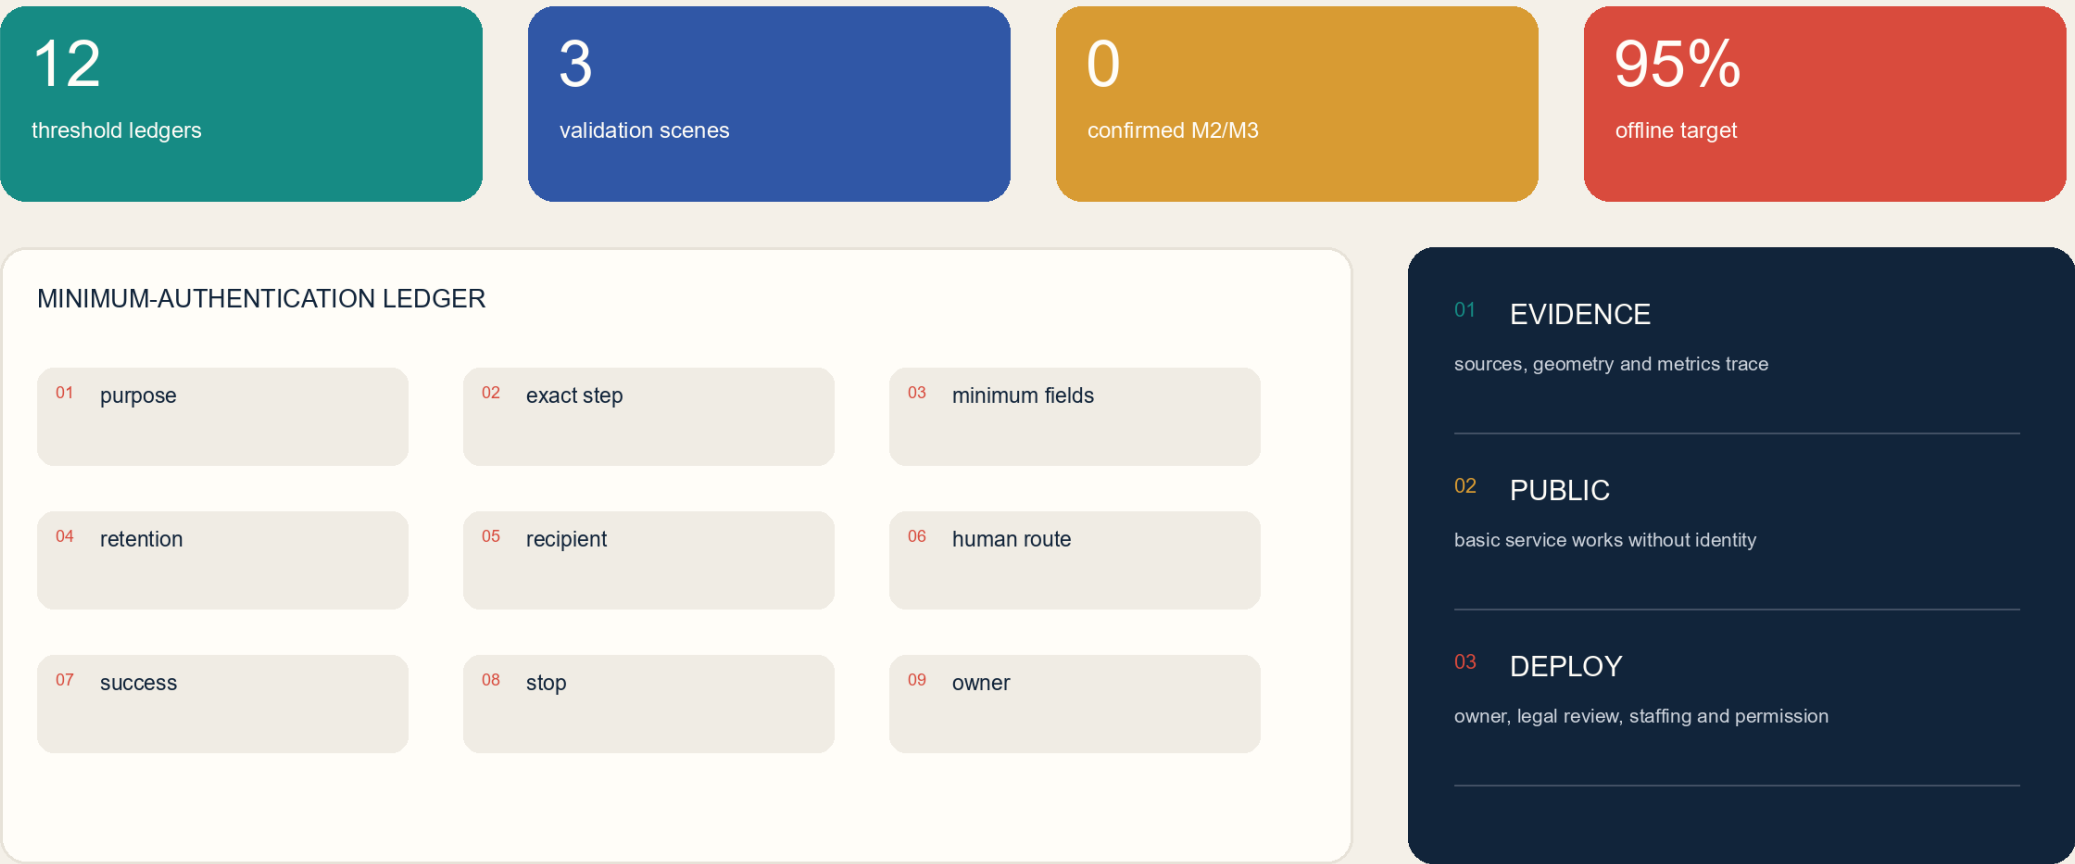

Independent metrics, no composite score

Geometry, excessive fields, deletion, staffed waiting, appeals and legal confirmation can each fail. Zero M2/M3 gates are represented as confirmed.

FIG 05

Core metrics and evidence: no composite score

Each measure can fail independently. Geometry, fields, deletion, staffing and legal confirmation cannot disappear into an average.

PROVISIONAL CONCEPT • NOT A REDLINE

MINIMUM-AUTH

Twelve field ledgers

Three industry validation scenes use synthetic data. Nine daily tasks cover help, government pre-check, health navigation, reading, youth workshops, shuttle support, events, enterprise service and complaints. Each discloses purpose, exact step, fields, retention, recipient, human route, thresholds and owner.

S01 • M2 Minimum-disclosure credential stress test UNVERIFIED VALIDATION ONLY	S02 • M1/M2 Cross-vendor field-leakage drill UNVERIFIED VALIDATION ONLY	S03 • M1/M3+S Deletion, takeover and appeal replay UNVERIFIED VALIDATION ONLY
S04 • M0→M1 Multilingual public help DESIGN TARGET	S05 • M0→M1→M3 Government pre-check, queue and filing M3 UNVERIFIED	S06 • M0→M3+S Health navigation and staffed handoff M3 S UNVERIFIED
S07 • M0→M2 On-site reading, terminals and borrowing M2 UNVERIFIED	S08 • M0→M2/M3+S Open youth workshop M2 M3 S UNVERIFIED	S09 • M1→M2 Accessible shuttle assistance M2 UNVERIFIED
S10 • M0→M1 Public events and capacity booking DESIGN TARGET	S11 • M0→M1→M3 Enterprise advice and formal filing M3 UNVERIFIED	S12 • M0→M1→M3+S Anonymous feedback and formal remedy M3 S UNVERIFIED

Implementation contract: who does what, when

G1 audits thresholds, baselines and permissions. G2 runs one reversible pilot per area. G3 expands passing tasks only; all others return to M0/M1 or close. No staffing, budget, deletion test or appeal owner means no expansion.

public service survives digital closure

DEPLOY

owner, permission, legal review and staffing

Correct use of law and cases

Chinese primary sources support minimum scope, shortest retention, non-face alternatives and result-only verification; M0-M3 remains a design inference. NIST, EUDI, Login.gov and RealMe inform mechanisms and risks, not Chinese compliance conclusions.

Deliverables and open matters

The package contains bilingual narrative, same-source GeoJSON and metrics, three matrices, ten original figures, bilingual static web views and four PDFs. Official geometry, controls, utilities, heritage, field personas, staffing, legal bases, permissions and licence choice remain open.
