

Jing-Zhang Pulse

China's first self-designed railway reawakens as an urban heartbeat in the AI era

1. Core Concept

Jing-Zhang Pulse

The Jing-Zhang Railway was China's first self-designed railway. A century later, high-speed rail went underground and the old surface line became a 9 km green corridor. Line 13 trains still shuttle past on the elevated viaduct — every 3-5 minutes, like a heartbeat.

Jing-Zhang Pulse makes this old line, cut by roads, into a breathing public spine once more. It breathes even when no one is there; when people come, they hear the pulse more clearly.

Three Segments

- South Home (Quiet): Beijing North Station — Zhichunlu, tight against residential areas. Light, calm, no disturbance. AI like an unobtrusive lamp.
- Middle Field (Gather): Zhichunlu — Qinghua East Road, widest section, closest to Line 13. Grass theater, heartbeat point.
- North Line (Flow): Qinghua East Road — North 5th Ring, narrow and natural. Light, fog, sound flow; no gathering. Protect the children's field.

Structure: One Spine, Three Segments, Nine Nodes

Breathing Gate, Old Track Memory, Home Plaza, Heartbeat Point, Grass Theater, Pulse Marker Tower, Mist-Light Corridor, Children's Field, Qinghe Wind Corridor

2. Three Key Interventions

1. Subway Sound-Light Heartbeat Point (Middle)

Where Line 13 viaduct is closest to the park.

- Lights brighten as train approaches
- Light band follows as train passes
- Lights dim in breathing rhythm after train leaves
- No loudspeakers; low-frequency vibration and ambient sound only

2. Grass Theater Human-AI Co-performance Field (Middle)

Sunken grass-slope amphitheater in the middle open lawn.

- Grass for sitting/lying by day
- Step lights create a stage at night
- People can sit, stay, make things happen
- Student concerts, developer demos, community cinema, AI art
- No fixed large equipment; everyday lawn character preserved

3. Pillar Light Cascade (North, Line 13 viaduct pillars)

Line 13 viaduct passes through the park in the north; the pillar row is itself a line.

- Four-sided projection mapping, lighting pillar by pillar as trains pass
- Century of rolling stock: steam locomotives, green-skinned trains, high-speed EMU
- Locomotives face the same direction as the train, past to future
- Warm golden light as art and path illumination; dims after 21:30
- No new structures, no pillar modification, no advertising

4. Old Track Walk Pulse Line (South, full route)

2.4 km of restored 1909 tracks in the south.

- Cultural anchor; path from home to stage
- Walkable, pausable, audible
- Not fenced off or enshrined
- Whisper-level audio posts along the tracks

5. South-Middle Path Gap and Sidewalk Wayfinding

The south and middle sections are separated by buildings; the park path does not connect.

- No demolition or construction; paint tricolor pulse line + arrows on detour sidewalks
- Turns the gap into a ceremonial gate crossing
- Photoluminescent or low-voltage self-illuminating at night; low cost, iterable

3. Scenario Cards (13)

- 01 Heartbeat Train: in-ground lights sync with passing Line 13 trains
- 02 Grass Theater: lawn by day, stage by night, spontaneous performances
- 03 Old Track Whisper: scan QR for railway history and AI soundscapes, whisper level
- 04 Breathing Gate: south entrance, warm white breathing light, welcoming home
- 05 River of Light in Mist: north section fiber optics light with footsteps
- 06 Children's Sound-Painting Wall: voices become colored ripples, gentle
- 07 Developer Demo Corner: semi-outdoor prototype demos and peer exchange
- 08 Qinghe Wind Whispers: wind devices transform river wind into light and sound
- 09 Community Cinema Night: 2-4 times/month, directional speakers
- 10 Pulse Morning Run: foot lights pulse with running rhythm, tricolor gradient
- 11 AI Railway Stories: keyword-generated stories on e-ink displays
- 12 Pulse Data Wall: real-time park vitals, anonymous data only
- 13 Pillar Light Cascade: north viaduct pillars project century of rolling stock

Three AI Test Scenarios

- 1. Train rhythm sensing and light sync (target latency <200ms)
- 2. Directional sound field boundary (55dB at 50m)
- 3. Child-friendly light/sound thresholds (65dB max, no direct eye brightness)

4. Personas, Events & Narrative

Five User Personas

1. South residents: daily life, parenting, downstairs-and-there. Need quiet, safety.
2. AI developers: work, exchange, light demo. Active mainly in the middle.
3. University students: inspiration, socializing, events. Primary theater users.
4. International visitors: recognition, check-in, sharing. Marker tower and heartbeat.
5. Children and parents: safety, fun, inspiration. South and north children's field.

Annual Events

- Spring: Pulse Opening Run (9 km) + Grass Theater Opening Season
- Summer: Community Cinema Night (2-4/month) + Developer Demo Day (monthly)
- Autumn: Jing-Zhang Railway Culture Week + AI Art Light Festival (Pillar Cascade)
- Winter: Warm Light Plan (south warm white + hot drink stations, undisturbing)
- Year-round: Pulse Morning Run (daily early morning, lights pulse with rhythm)
- No large events in the south; middle soundscape $\leq 55\text{dB}$ at 50m

Three AI Pilgrimage Landmarks

1. Heartbeat Point (middle): the ritual of waiting for a train
2. Pulse Marker Tower (middle): vantage point to see the 9 km spine
3. Pillar Light Cascade (north): cinematic sequence from past to future

Cultural Narrative & Guide Route

Narrative: from self-designed railway to self-designed intelligence.

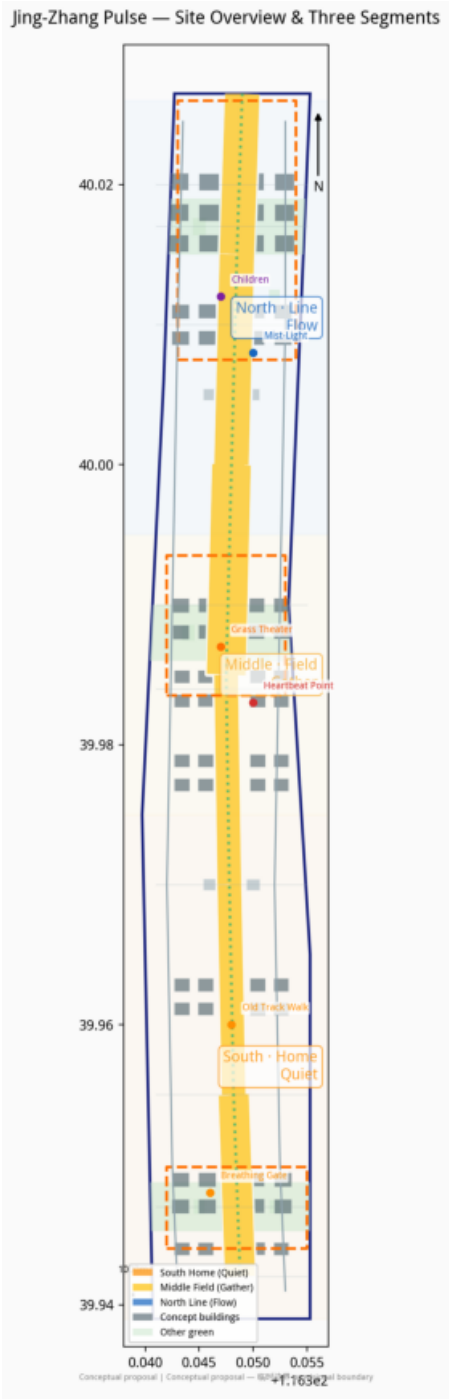

Route (10 stops, ~5 km): Breathing Gate -> Old Track Memory -> Home Plaza

-> Zhichunlu gap gate crossing (sidewalk tricolor detour) -> Heartbeat Point

-> Grass Theater -> Marker Tower -> Mist-Light Corridor -> Pillar Cascade -> Children's Field

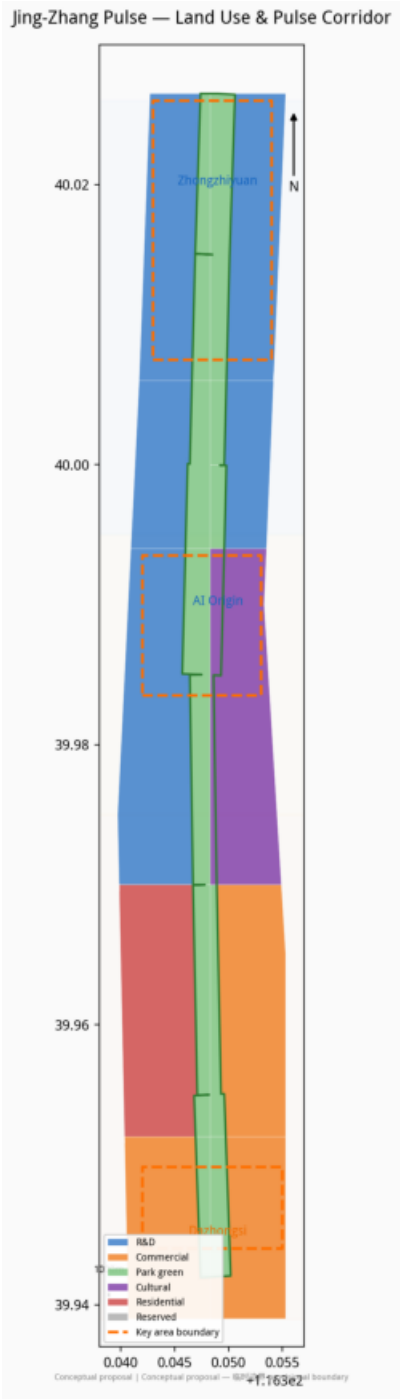

Principles: light intervention, iterable; south residents have veto; quiet hours 22:00-7:00.

Conceptual proposal | Conceptual proposal — All metrics based on provisional boundaries, subject to official survey

Concept: Heartbeat Train

Middle · in-ground lights follow Line 13 trains

Concept: Grass Theater

Middle · sunken lawn by day, stage by night

Concept: Breathing Gate

South · warm white light welcoming home

Concept: River of Light in Mist

North · fiber optics light with footsteps

Concept: Sound-Painting Wall

North · children's voices become colored ripples

Concept: Pillar Light Cascade

North · century of rolling stock on viaduct pillars
