

The Jingzhang Doorstep

People's AI Everyday Belt

A livelihood-problem-driven urban design for the Centennial Jingzhang AI Innovation Belt

Team: YOUYINGYANG Version: v1.0 Tracks: AI Public Services · Civic Agent Governance · Youth-friendly Public Space

This belt does not need another grand narrative. It needs to answer the questions residents ask every day — a faster commute, safety for elderly parents at home, secure routes for children, and how quickly a repair request is answered. Problem-pull replaces technology-push: the 9.7 km Jingzhang heritage corridor is organised as a 15-minute People's AI service belt — 12 livelihood service nodes, 13 AI scenario cards and 21 land-use parcels, all mapped and re-computable under EPSG:4548.

11.4 km² Overall design area	368.4 ha Three key areas	30.8% Green ratio	36.6% Public open space
27.4 km Slow-mobility network	12 Livelihood service nodes	13 AI scenario cards	21 Land-use parcels

01 Site & Structure · Three-level Scope

Spatial Structure: One Corridor · Six Segments · Three Districts · Two Wings

- Three-level scope: 43.6 km² coordination research area (industry & future-city study); 11.4 km² overall design area (regulatory-plan-depth urban design, recalculated area matches the announcement); 368.4 ha key areas (comprehensive implementation depth).
- Spatial structure 'one corridor, six segments, three zones, two wings': the 9.7 km heritage corridor as the spine; six east-west stitching walks repair the railway severance.
- Synergy loop: Zhongzhi Park (make tools) → Origin Community (use tools) → Dazhongsi (turn tools into business) → two wings export standards and回流 new problems; the loop closes on livelihood resolution rate, not output value.
- 21 land-use parcels: residential 258.8 ha, park green 289.9 ha, commercial 153.0 ha, research 138.3 ha; residential + community services ≈326 ha (28.6%) — industry fitted into a living district, not dormitories fitted into an industrial park.
- Renewal strategy 'retain & adapt first': of 16 conceptual renewal objects, 4 retained, 10 adapted, only 2 new builds (both in Zhongzhi Park).

02 Key Areas · Three Detailed Designs

Three Key Detailed-Design Areas

1. Zhongzhiyuan Acceleration Area (192.1ha, prov.) — People's-AI R&D

2. AI Origin Community (104.3ha, prov.) — 15-min living circle

3. Dazhongsi Cluster (72.0ha, prov.) — AI-native livelihood commerce

Conceptual design on provisional boundary (PROV-SITE-001) · Not an official redline · Recomputed in EPSG:4548

① Zhongzhi Park AI Acceleration Zone (192.1 ha)

The only zone carried by new construction: 'build tools for livelihood problems'. West wing: livelihood-AI labs and full-stack pilot workshop; east wing: talent apartments; central heritage park with launch lawn. Risk: new volume depends on regulatory-plan confirmation — a precondition.

② Beijing AI Origin Community (104.3 ha)

The 'main battlefield': how AI improves daily life. Life-circle service centre (canteen + childcare + repair in one stop), children's school-route stations, densest stitching walks. Risk: community scenarios require resident consent — deliberation before devices.

③ Dazhongsi AI Industry Cluster (72.0 ha)

How AI services become sustainable business. AI-native livelihood retail test street, community canteen and senior tables, pilot market. Risk: food safety, labour and fire compliance — pilot agreements reviewed item by item.

03 Mobility & Blue-Green · The First Infrastructure

Slow Mobility + Blue-Green Public Space System

- Slow mobility as the first transport infrastructure: 9.7 km heritage slow-mobility spine, parallel commuter bikeway on the east, six stitching walks, Qinghe waterfront greenway — ≈27.4 km in total.
- Blue-green system: heritage park spine (289.9 ha park green) + Qinghe waterfront buffer + sports & health land; green ratio 30.8%, public open space 36.6%.
- Key design move: turn the park from 'a place to look at' into 'a place to get things done' — 12 livelihood service nodes evenly along the spine, ≈800 m apart, a 'doorstep' within a 10-minute walk.
- Three AI pilgrimage landmarks: the Solved-Problem Wall (Qinghuayuan Station Memory Square), the Fixers' Honour Garden (Zhongzhi Park), the Arrival Living Room (North Station) — celebrating solved problems, not technology.
- No new rail alignment proposed; only arrival-service integration around Beijing North Station, subject to transport authorities.

04 Scenarios & Personas · Thirteen Scenario Cards

Six real people (personas)

- Mother with kids (Origin Community): pickup vs childcare time clash → S03, S08
- Senior living alone (Zhichun Rd): home safety & chronic disease → S02, S01
- Disabled commuter (whole belt): transfer gaps, missing accessibility info → S04
- Night-shift worker (Dazhongsi): night travel & night meals → S04, S08
- Couriers & riders (whole belt): the last 100 m → S11 robot delivery
- Small shop owners (Dazhongsi): digital barrier, unstable footfall → S06, S11

Card format: problem → AI answer → spatial anchor → data & privacy boundary → human review → operator → KPI → exit condition

- | | |
|---|---|
| <ul style="list-style-type: none">• S01 Chronic-disease care: community health records & pre-triage; data stays at the community edge• S02 Home guardian for seniors: mmWave (non-camera) fall detection; raw data never leaves home• S03 School-route guardian: risk heatmap & patrol scheduling; no facial recognition• S04 Accessible transfer: dynamic accessible routing & low-speed shuttle booking; instant anonymisation• S05 Community AI class: university teachers & open courses; no personal data from learners• S06 Legal-aid pre-review: structured case triage & document templates; licensed lawyers sign off• S07 Repair-request response: smart work-order dispatch & public progress; property manager approves | <ul style="list-style-type: none">• S08 Canteen smart catering: demand forecasting & meal optimisation; order volume only• S09 Gig-job skill matching: skill graph & job matching; anonymised CVs, user-confirmed applications• S10 Hotline dispatch: semantic assignment & open progress; errors fall back to manual• S11 Last-100-m robot delivery: low-speed robots; remote operator + on-site safety officer• S12 Home-repair robot pilot: written consent for entry; staff accompany throughout• S13 Mobile health screening: vehicle-mounted screening & AI pre-diagnosis; physicians sign reports |
|---|---|

Privacy principles: collect only what is necessary, keep data in-home where possible, anonymise by default, and always provide human review and an exit switch.

05 Metrics & Evidence · Fully Re-computable

06 Implementation & Risks · An Honest Checklist

Phasing

- Near term (0–3 yrs, ≈278 ha): Dazhongsi & Origin Community first — low-cost, high-perception livelihood scenarios (canteen, stations, pilot market).
- Mid term (3–7 yrs, ≈623 ha): Xueyuan Rd, Zhichun Rd & Zhongzhi Park — campus-city sharing and technology sourcing.
- Long term (7–15 yrs, ≈235 ha): North Station gateway & Qinghe waterfront.

Renewal project list (12 items, all conceptual)

1 Heritage slow-mobility spine (whole belt)	7 Livelihood-AI incubator (B04, adapt)
2 Six east-west stitching walks	8 Campus-city shared academy (B03, adapt)
3 Life-circle service centre (B05, adapt)	9 Qinghuayuan Station memory hall (B03, adapt)
4 Community canteen & senior tables (B02, adapt)	10 Retail flagship test ground (B02, adapt)
5 School-route station (B05, adapt)	11 Livelihood-AI lab cluster (B07, new)
6 Senior day-care centre (B04, adapt)	12 North Station arrival living room (B01, adapt)

Key risks

- ① Missing regulatory-plan conditions limit intensity discussion to scenarios — mitigation: mark all unknown and commit to same-formula recalculation.
- ② Community scenarios depend on resident consent — mitigation: deliberation mechanism first, consensus before devices.
- ③ Food-safety, labour and fire compliance in retail pilots — mitigation: item-by-item pilot agreements, insurance first.
- ④ Deviation between provisional and official boundaries — mitigation: recompute geometry and metrics with the same formulas.
- ⑤ Operational sustainability — mitigation: Dazhongsi test street validates self-financing.
