

VISION / CENTENNIAL JING-ZHANG AI INNOVATION BELT

FROM LAB TO CITY

One park, three stations, bringing laboratory results into everyday city life.

Concept aerial: one park connects three stations. Not a site photograph or statutory plan.

43.6 km²
coordinated research scope

11.4 km²
overall design scope

368.4 ha
three key areas combined

WHY DO AI RESULTS STRUGGLE TO REACH DAILY LIFE?

Many results can be demonstrated, but testing, responsibility, maintenance, and feedback remain disconnected.

Do not build another enclosed campus; connect research with real use.

ONE PARK, THREE STATIONS

Three places do one job each: test, explain, and then move into daily life.

Three scope levels, key areas, and regional partners; provisional boundaries for concept study only.

ZHONGZHIYUAN | TEST

Test whether devices work safely and reliably.

AI ORIGIN | EXPLAIN

Explain who it serves, who is responsible, and what happens on failure.

DAZHONGSI | USE

Use it in daily life, with repair, recall, and feedback on site.

FIVE REGIONAL PARTNERS

AI Beiwei, Future Science City, Huairou Science City, Beijing E-Town, and Jing-Jin-Ji exchange tasks, records, and feedback; no partnership is presented as signed.

PUBLIC SPACE / HERITAGE / EVERYDAY LIFE

BUILD THE PATH, SHADE, AND SEATS FIRST

Ensure everyone can walk, rest, and find human help before introducing smart scenarios.

Concept experience of continuous public space, open foreground, and controlled work area.

CONNECTED

continuous route and alternatives

RESTFUL

shade, rain cover, water, rest

LEGIBLE

fixed signs, paper maps, clear limits

HUMAN

human help and accessibility

REVERSIBLE

space remains complete after removal

THREE KEY AREAS / THREE DIFFERENT JOBS

THREE PLACES, ONE JOB EACH

Test it, explain it, and then move it into everyday life.

Architectural scenes for making, translation, and first use.

02 / TRANSLATE

AI ORIGIN | EXPLAIN

Review access, data, maintenance, and responsibility before choosing AI.

03 / USE

DAZHONGSI | USE

Daily use, human takeover, repair, and recall on site.

01 / MAKE

ZHONGZHIYUAN | TEST

Publicly visible, with segregation, stop, and repair access.

100 DAYS / USE / LEARN / DECIDE

EVERY PROJECT STARTS WITH 100 DAYS

Define the problem and responsibility, then use it at limited scale; continue what works and remove what does not.

Keep what works; remove what does not.

WHO BENEFITS, WHO IS RESPONSIBLE, WHEN DOES IT STOP?

Every AI project first answers four ordinary questions; all thirteen scenarios are proposals, not approved projects.

01 / PEOPLE

WHO NEEDS IT?

Name real users; do not reduce people to traffic.

S01—S04 · MAKE

4 INDUSTRY TESTS

Compatibility, low-speed robots, red teaming, energy and cooling are tested in isolation first.

02 / OWNER

WHO OWNS IT?

Publish responsibility, maintenance, and cost.

S05—S07 · TRANSLATE

3 TRANSLATION SCENARIOS

Explain results to residents, operators, and disabled users; people retain commissioning decisions.

03 / FALLBACK

CAN IT WORK WITHOUT AI?

Keep ordinary signs, human service, and appeal.

S08—S09 · USE

2 FIRST-USE SCENARIOS

Repair, recall, same-day removal, and human takeover remain available on site.

04 / STOP

WHEN DOES IT STOP?

State stop conditions and the removal date.

S10—S13 · PARK

4 EVERYDAY PUBLIC SCENARIOS

Wayfinding, heat comfort, night help, and interpretation retain ordinary signs and human help.

NOT ALLOWED

No indiscriminate face recognition, emotion inference, automated public-service eligibility, or unappealable person scoring.

TEN USER GROUPS RETAIN HUMAN SERVICE

Everyone retains an app-free path, human help, appeal, and exit.

01 RESEARCHERS

02 DEVELOPERS + START-UPS

03 OLDER RESIDENTS

04 CHILDREN + CARERS

05 DISABLED + MOBILITY-LIMITED PEOPLE

06 SMALL MERCHANTS + FRONTLINE STAFF

07 PARK + BUILDING OPERATORS

08 PUBLIC-SERVICE + PROFESSIONAL WORKERS

09 DOMESTIC + INTERNATIONAL VISITORS

10 INDEPENDENT SAFETY, ETHICS + ACCESSIBILITY REVIEWERS
