

CENTENNIAL JING-ZHANG AI INNOVATION BELT

FROM LAB TO CITY

INNOVATION IN EVERYDAY LIFE

One park, three stations, bringing laboratory results into everyday city life.

Agent-generated concept aerial showing the spatial vision; not a site photograph or statutory plan.

Not government approval

WHY DO AI RESULTS STRUGGLE TO REACH DAILY LIFE?

Many results can be demonstrated but not yet used every day. Testing, responsibility, maintenance, and feedback are still disconnected.

The proposal does not build another enclosed campus. It uses the Jing-Zhang park to connect research, use, and feedback.

THE JING-ZHANG PARK CONNECTS RESEARCH AND USE

The park must first be easy to walk, rest in, and find human help. Three stations then host making, explanation, and real-world use.

One continuous park connects three stations; coloured bands show a concept relationship, not statutory parcels.

ONE PARK, THREE STATIONS

The three places are not identical AI centres. Each does one job to move results into daily life.

Three scope levels, three key areas, and five regional hand-offs. Boundaries are provisional repository geometry for concept study only.

MAKE

ZHONGZHIYUAN

Test whether devices work safely and reliably.

TRANSLATE

AI ORIGIN

Explain who it serves, who is responsible, and what happens on failure.

USE

DAZHONGSI

Use it in daily life, with repair, recall, and feedback on site.

FIVE REGIONAL PARTNERS

These are proposed ways to hand off tasks and results, not signed or delivered projects.

AI BEIWEI

frontier incubation and industry questions → bounded tasks

FUTURE SCIENCE CITY

engineering questions → controlled making and retest

HUAIROU SCIENCE CITY

research methods ↔ researchable city questions

BEIJING E-TOWN

after a passed 100-day trial → industry channel

JING-JIN-JI

portable interfaces, failure and repair records

BUILD THE PATH, SHADE, AND SEATS FIRST

Concept experience of a public foreground and controlled work zone; people and activities are synthetic design content.

CONNECTED

Ordinary routes stay continuous, with clear alternatives.

RESTFUL

Shade, rain cover, water, and rest come first.

LEGIBLE

Fixed signs, paper maps, and human explanation remain available.

HUMAN

Everyone can reach human help, including older and disabled users.

REVERSIBLE

Public space remains complete after a pilot leaves.

THREE PLACES, ONE JOB EACH

Three key scenes: making, translation, and first use.

01 / ZHONGZHIYUAN

MAKE

Learn what works, what fails, and how to retest.

02 / AI ORIGIN

TRANSLATE

Explain who it serves, who is responsible, and what happens on failure.

03 / DAZHONGSI

USE

Observe real use, repair cost, and whether it should stay.

All three places sit on one park route, but their test limits, spaces, and forms of public participation differ.

ZHONGZHIYUAN: TEST IT FIRST

Zhongzhiyuan Make Yard: publicly observable, safely segregated.

01

ZHONGZHIYUAN / MAKE YARD

VISIBLE WITHOUT PASSING RISK TO BYSTANDERS

- Low-risk devices are tested in a closed area first.
- Observation, emergency stop, and repair access are designed together.
- Record success and failure so the same test can be repeated.

AI ORIGIN: DEFINE THE PROBLEM FIRST

AI Origin Translation Station: human-first intake, open steps, and small translation rooms.

02

AI ORIGIN / TRANSLATION STATION

DEFINE THE NEED BEFORE CHOOSING AI

- Residents, institutions, and researchers first explain the problem at a staffed desk.
- Accessibility, data, maintenance, and legal responsibility are checked first.
- AI may organise information but cannot promise resources or deny service for people.

DAZHONGSI: PROVE IT IN DAILY USE

Dazhongsi First-use Street: experience, human takeover, and repair in daily life.

03

DAZHONGSI / FIRST-USE STREET

NOT AN EXHIBIT: IT MUST WORK EVERY DAY

- Only low-risk services with human fallback and same-day removal enter first use.
- Service, repair, recall, and opt-in small businesses share one place.
- Praise, complaints, repair cost, and removal reasons are all recorded.

EVERY PROJECT STARTS WITH 100 DAYS

The 100 days are not a show. Each project states the problem, responsibility, and stop plan before limited use.

DAY 0—20 DEFINE Who needs it, why AI is needed, who is responsible, and how ordinary service remains.	DAY 21—50 TEST Professional review, closed testing, and a removal drill.	DAY 51—80 USE Limit people, time, and place; human takeover remains available.	DAY 81—100 LEARN Publish value, failures, complaints, repair cost, and removal reasons together.
--	---	---	---

STOP	REVISE	CONTINUE	DEVELOP
------	--------	----------	---------

WHO NEEDS IT?

A real user is required; no project exists for display alone.

WHO IS RESPONSIBLE?

Name the responsible person and maintenance cost from day one.

WHAT IF IT FAILS?

People can take over and ordinary service continues.

WHEN DOES IT LEAVE?

If it fails review, remove it on the agreed date.

KEEP WHAT WORKS; REMOVE WHAT DOES NOT

Build the park paths, lighting, shade, drainage, and human service first; then add small removable pilots.

01 RECOVER Obtain approved plans, survey, title, buildings, mobility, utilities, and heritage data.	02 REPAIR Deliver access, accessibility, shade, lighting, drainage, and human service first.	03 PILOT Equipment is removable, with clear limits on use and risk.	04 DECIDE Continue what works; remove what cannot prove its value.
--	---	--	---

Height, intensity, building decisions, bridges, tunnels, and utility capacity await official data and professional design; no figures are invented now.

01 / DATA OFFICIAL DATA FIRST No intensity or engineering boundary without approved plans, survey, and title.	02 / PUBLIC PUBLIC SERVICE FIRST No pilot occupies public space before access and human service work.	03 / EVIDENCE EVIDENCE BEFORE SCALE No long-term delivery without 100-day results and professional review.
--	--	---

FROM LAB TO CITY OPEN WEEK

Proposed working name; event, date, funding, and partners are not confirmed.

SPRING / ASK open call for city problems problem briefs	SUMMER / MAKE closed making and red teams test records	AUTUMN / USE bounded first use use and repair feedback	WINTER / LEARN publish failure, care, and retirement annual work ledger
--	---	---	--

WHO BENEFITS, WHO IS RESPONSIBLE, WHEN DOES IT STOP?

Every AI project first answers four ordinary questions. All thirteen scenarios are proposals, not approved projects.

01 / PEOPLE WHO NEEDS IT? Name real users; do not reduce people to traffic.	02 / OWNER WHO OWNS IT? Publish responsibility, maintenance, and cost.	03 / FALLBACK CAN IT WORK WITHOUT AI? Keep ordinary signs, human service, and appeal.	04 / STOP WHEN DOES IT STOP? State stop conditions and the removal date.
S01—S04 · MAKE 4 INDUSTRY TESTS Compatibility, low-speed robots, red teaming, energy and cooling are tested in isolation first.	S05—S07 · TRANSLATE 3 TRANSLATION SCENARIOS Explain results to residents, operators, and disabled users; people retain commissioning decisions.	S08—S09 · USE 2 FIRST-USE SCENARIOS Repair, recall, same-day removal, and human takeover remain available on site.	S10—S13 · PARK 4 EVERYDAY PUBLIC SCENARIOS Wayfinding, heat comfort, night help, and interpretation retain ordinary signs and human help.

NOT ALLOWED	No indiscriminate face recognition, emotion inference, automated public-service eligibility, or unappealable person scoring.
-------------	--

TEN USER GROUPS RETAIN HUMAN SERVICE				Everyone retains an app-free path, human help, appeal, and exit.	
01 RESEARCHERS	02 DEVELOPERS + START-UPS	03 OLDER RESIDENTS	04 CHILDREN + CARERS	05 DISABLED + MOBILITY-LIMITED PEOPLE	
06 SMALL MERCHANTS + FRONTLINE STAFF	07 PARK + BUILDING OPERATORS	08 PUBLIC-SERVICE + PROFESSIONAL WORKERS	09 DOMESTIC + INTERNATIONAL VISITORS	10 INDEPENDENT SAFETY, ETHICS + ACCESSIBILITY REVIEWERS
