

THE NURSERY

Treating the AI innovation belt as a city garden that needs nurturing — Six Mechanisms · Three Districts Two Wings · Lifecycle Governance

Self-built road (1909) → Self-driven innovation (1978) → Self-governance (2026 Nursery)

Six-Mechanism Governance

- 01

Cultivation — a birth certificate to enter
Greenhouse committee review + 3-month trial; archive tracked end-to-end
- 02

Irrigation — nutrients are public goods
Data trust + compute scheduling + open irrigation records
- 03

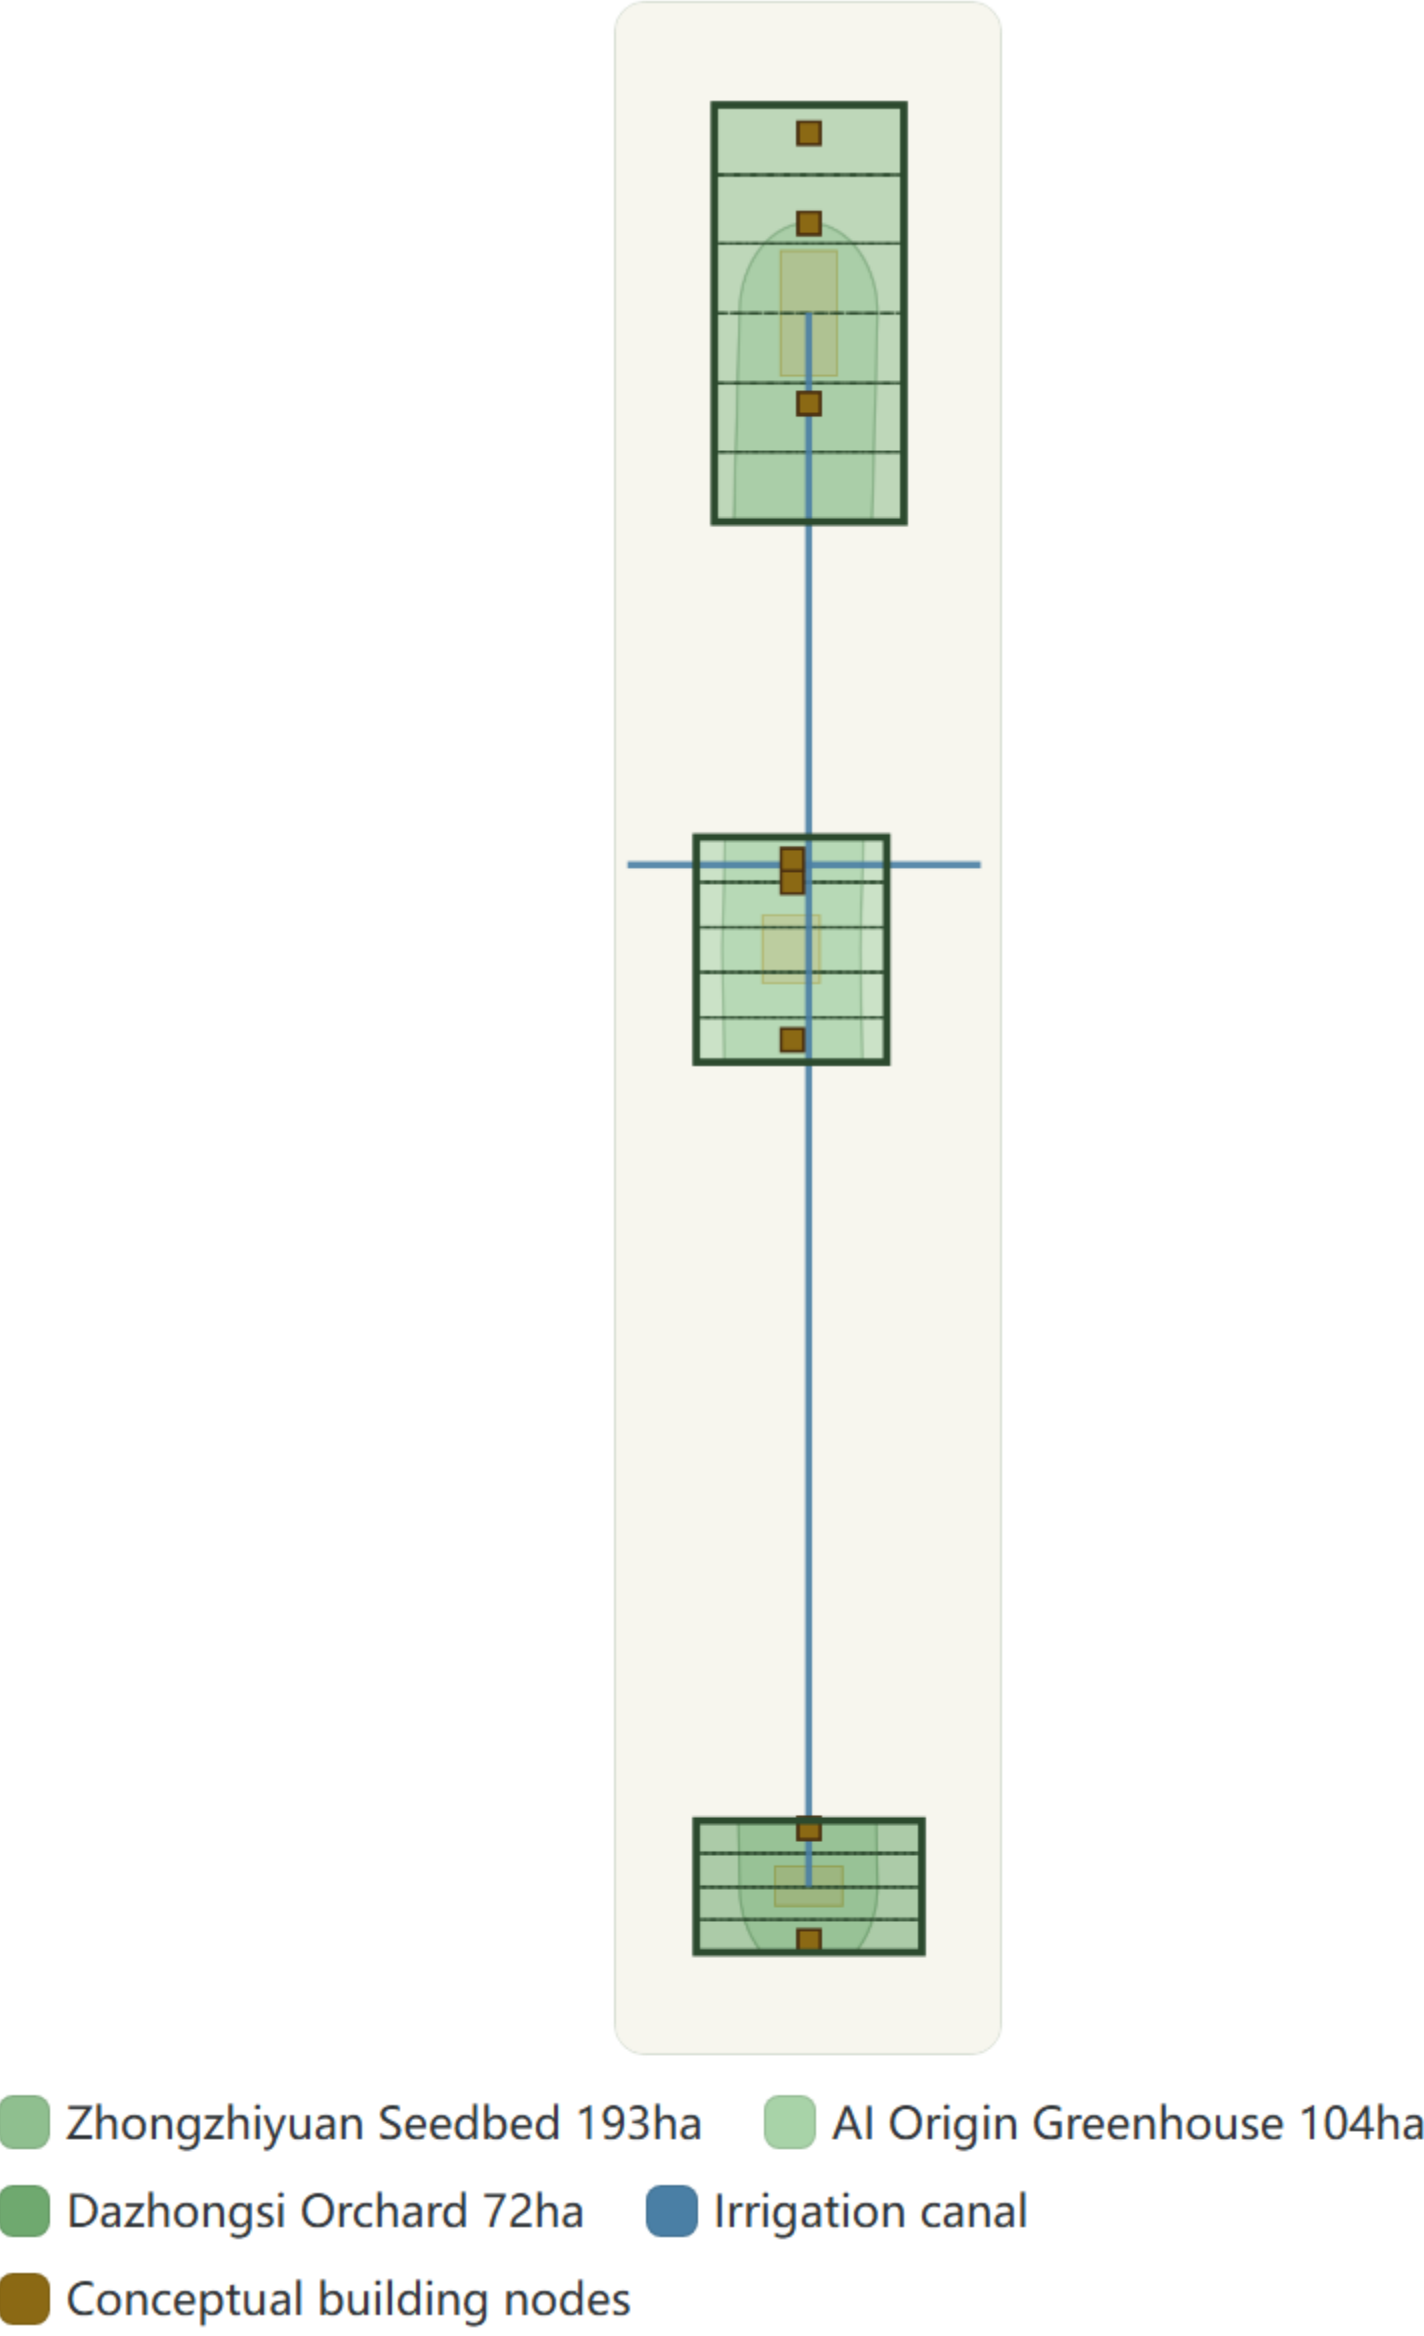

Pruning — annual rings public
Third-party annual audits + continuous monitoring (Model Cards)
- 04

Shading — institutional + operational safeguards
Guardian committee + three-level state machine + human takeover
- 05

Rotation — auditable retirement
Three checks (data purge / liability transfer / memory archive) + failure files
- 06

Nitrogen Fixing — give nutrients back
Reciprocity duty + contribution review + open-source symbiosis credits

Three Districts Two Wings • Real Base Map

Three Districts

- Zhongzhiyuan Seedbed • 193ha**
Garden-style AI innovation block · greenhouse clusters / adoption beds
- AI Origin Greenhouse • 104ha**
Campus-proximate talent community · culture beds / night school / youth housing
- Dazhongsi Orchard • 72ha**
Urban AI-industry cluster · orchard hub / station-city integration
