

JING-ZHANG / 2026 / OPEN CALL

Jing-Zhang Breathing Commons: Verifiable Urban Climate and Public Wellbeing

A measurable and pauseable public
condition shared by people, city, and
compute

JING-ZHANG
BREATHING
COMMONS

CONCEPTUAL / PROVISIONAL
HUMAN REVIEW REQUIRED

CONCEPTUAL · PROVISIONAL · HUMAN REVIEW REQUIRED

Overall Area and Breathing Spine

Provisional geometry as a north-to-right sequence; not an official redline

JZ / 01

PUBLIC OPERATING CONTRACT

MEASURE / SERVE

minimum data + staffed route

REVIEW / HOLD

anomaly, complaint, uncertainty

STOP / EXIT

privacy, access, ownership failure

SIX RELOCATABLE PUBLIC UNITS

01 air observatory

02 shaded stop

03 quiet co-translation

04 blue-green wind gate

05 heat-return node

06 staffed access hall

One spine, three lungs, two wings

The breathing spine combines shade, walking, cycling, accessible rest, environmental observation, and a visible human fallback. Zhongzhiyuan validates environmental AI; the AI Origin Community tests intergenerational daily services; Dazhongsi explores public exchange without claiming a verified station boundary.

01 Verification Lung

02 Living Lung

03 Exchange Lung

Land-use Structure and Public Interface

Recalculable bands; shade, access, staff, and removable devices come first

JZ / 01

Three Key Areas: Plan Evidence and Distinct Jobs

Concept buildings, green space, routes, and intersecting nodes inside provisional areas; not a statutory plan

JZ / 01

Position-robust spatial units

Six plug-in units—air observatory, shaded stop, quiet co-translation point, blue-green wind gate, heat-return node, and staffed accessibility hall—can be recalculated and relocated when official polygons, baselines, and utilities arrive. The mechanism does not depend on a false-precision station point.

- ROUTE GUARANTEE
- phone-free + account-free
 - continuous staffed fallback
 - no sensing between named nodes
 - blocked route disables advice

12 nodes ≠ continuous collection

PUBLIC JOURNEY

Metrics, Six Acceptance Gates, and Recalculation

Spatial values come from layers; all gates are not run and field performance stays unknown

JZ / 01

Provisional site area 11,412,825 sqm	Land-use design zones 5	PUBLIC-VALUE ACCEPTANCE / NOT RUN	
Concept building carriers 6	Green ratio 12.6%	EQ-01 Non-digital service equivalence	PRIV-01 Minimum collection and anonymity
Scenario-node coverage 0.9%	Breathing spine 9,242.5 m	TAKE-01 Human takeover drill	ACC-01 Accessible journey walk-through
Scenario cards 12	Human fallback 1	DATA-01 Device and data traceability	OPS-01 Operations ownership and cost boundary

EVIDENCE CHAIN

UNKNOWN: FAR · height · ownership · utilities · baseline performance · local cost

Numbers never turn provisional geometry into an official redline.

AI may sense, predict, and recommend. It may not approve planning, profile individuals, or remove the non-digital route. Every scenario has a named human reviewer, an anomaly or staff stop condition, data-minimization rules, and a visible service alternative.

01 Accessible comfort route Human review · stop control · no-AI equivalent	02 Heat-risk notice and staffed service Human review · stop control · no-AI equivalent	03 Anonymous environmental sensing Human review · stop control · no-AI equivalent
04 Low-speed maintenance robot Human review · stop control · no-AI equivalent	05 Blue-green irrigation assistance Human review · stop control · no-AI equivalent	06 Night lighting and quietness coordination Human review · stop control · no-AI equivalent
07 Public return of compute waste heat Human review · stop control · no-AI equivalent	08 Public-space comfort notice Human review · stop control · no-AI equivalent	09 Allergy and air notice Human review · stop control · no-AI equivalent
10 Heritage-material environment monitoring Human review · stop control · no-AI equivalent	11 Community environmental Q&A Human review · stop control · no-AI equivalent	12 Event-day temporary breathing commons Human review · stop control · no-AI equivalent

0–18 months

Baseline, public-space permissions, reversible pilots

18–48 months

Continuous spine, shared standards, municipal coordination

48+ months

District renewal only after approved controls, ownership, and finance

Known / Unknown / Stop

Known: submitted geometry, derived ratios, node and phase counts.

Unknown: official polygons, statutory controls, buildings, ownership, utilities, and site baselines.

Stop: sensor anomaly, staff override, privacy risk, inaccessible service, or evaluation failure.

Six gates before expansion

All statuses are NOT RUN. The contract defines evidence; it does not claim a field result.

EQ-01
Non-digital service equivalence

12/12 scenario records identify a usable non-digital equivalent before activation.

PRIV-01
Minimum collection and anonymity

Zero unauthorized personal identifiers in the reviewed pilot payloads.

TAKE-01
Human takeover drill

Every active scenario completes a documented takeover drill before public operation.

ACC-01
Accessible journey walk-through

No unresolved accessibility blocker remains on an activated pilot journey.

DATA-01
Device and data traceability

100% of active pilot devices have complete registry fields and a visible notice.

OPS-01
Operations ownership and cost boundary

Every activated unit has a named authorized operator and an approved, withdrawable cost envelope.

PASS + public value → EXPAND / safety pass, value uncertain → HOLD LOCAL / persistent stop rule → EXIT

Roles: competent authority · authorized operator · technical verifier · accessibility reviewer · community/public-health reviewer — all TBC
