

Jingzhang AI Rail Corridor — Overall Structure & Land Use

Overall concept: One Axis · Two Belts · Three Areas · Multiple Nodes — Jingzhang AI Rail Corridor

Conceptual land-use structure (overall design area, approx. 11.4 km²)

Core metrics recomputation and evidence chain (EPSG:4548)

Evidence chain & recomputation notes

site_area_sqm = 11,412,825 sqm (PROV-SITE-001 provisional boundary; announced approx. 11.4 km²)

Green = 141.2 ha | Public space = 13.5 ha | Building footprints = 94.9 ha

Proposed footprints = 607 | Heritage greenway = 9.2 km

floor_area_ratio = pending official data (regulatory controls missing; not fabricated)

Method: EPSG:4326 to EPSG:4548 (CGCS2000 / 3-degree GK CM 117E); shapely union/sum; formulas in metrics.json.

Evidence chain: geometry/*.geojson (authoritative) -> metrics.json -> three matrices -> this figure (human-readable summary).

* Key-area labels use announced values; recomputed values derive from provisional polygons, concept use only.

Jingzhang AI Rail Corridor — Key Areas, Mobility & Metrics

Three key areas: index and detailed-design tasks

Mobility, slow-traffic and blue-green public-space system

Core metrics recomputation and evidence chain (EPSG:4548)
