

01 / OVERALL CONCEPT

REV 0.3

# THE CURIOSITY LINE

One learning spine, three yards, six public gates, and twelve urban classes. Provisional geometry remains a low-contrast constraint.

- 1 Learning spine
- 3 Learning yards
- 6 Public gates
- 12 Urban classes

PROVISIONAL GEOMETRY / 待官方红线发布后整体复算

# FROM LAND USE TO A LEARNING NETWORK

Research, green space, enterprise services, and community support connect through the learning spine and six Curiosity Gates.

**Learning spine**  
Continuous slow mobility, open classes, heritage

**Six Curiosity Gates**  
Explain, consent, test, human help, exit, audit

**Shared time**  
Activate ground floors, yards, and reversible kits

**Professional follow-up**  
Statutory controls, ownership, fire, utilities, heritage

# VALIDATE - TRANSLATE - ADOPT

Prototype Yard at Zhongzhiyuan, Commons Learning Yard at AI Origin, and Adoption Yard at Dazhongsi form a staged public innovation chain.

VALIDATE -> TRANSLATE -> ADOPT -> REVIEW

# SLOW MOBILITY, BLUE-GREEN SPACE, AND 12 CLASSES

Walking, cycling, accessibility, and rail interchange come first. Low-speed robots remain limited and human-supervised.

# RECALCULABLE SPACE + QUESTIONABLE OPERATIONS

GeoJSON holds spatial facts, metrics hold formulas, and six public gates protect explanation, consent, human help, exit, and audit.

GeoJSON -> metrics -> matrices -> figures -> HTML/PDF -> public review

Known values test internal consistency; statutory controls remain pending official data.
