

Jing-Zhang AI Symbiosis Belt — Urban Design Proposal

A3 Booklet / A0 Boards (English)

This booklet is the readable drawing layer. Authoritative evidence remains proposal.md, GeoJSON, metrics.json and the matrix files. Provisional geometry is for intake display and design discussion only.

Basis and scope

The proposal is based on the official announcement and the site package. Coordinated research area: 43.6 km2; overall design area: 11.4 km2; key area: 368.4 ha. The concept is one belt, three cores, multi-node scenarios and a blue-green slow-mobility loop.

Key areas

Zhongzhiyuan: full-stack innovation, standards and governance, Qinghe low-carbon interface. Beijing AI Origin Community: university transformation, open source, talent services. Dazhongsi: AI agents and terminals, data elements, four-quadrant pedestrian connection.

Mobility and blue-green system

One Jing-Zhang green axis, five horizontal innovation service roads and station connections; green and public-space ratios are recomputed from the same GeoJSON in EPSG:4548.

Metrics and compliance

site_area_sqm, green_ratio and public_space_ratio are known and recomputable; FAR remains unknown until official control data is published. The compliance matrix covers all official and agent tasks.

Risk and boundary

When control, redline, ownership, municipal or heritage data is missing, related conclusions remain pending professional confirmation; all spatial ideas are conceptual suggestions.

Drawing index

site-overview evidence map; land-use-structure scope and land use; key-areas; mobility-bluegreen; metrics-evidence.
