

A3-01 Overall concept

Habitat on the Rails: people's daily routes first; industry and smart services second

Judgment

Design judgment

Livability first. Improve human-settlement elements and fine-grained renewal before embedding AI on corridor and quarters.

Structure

Spatial structure

One corridor, three quarters, two belts, five everyday nodes, three phases.

Evidence

How evidence works

Layers, metrics, matrices, and self-check support formal review; narrative is written for people.

Limits

Use limits

Conceptual suggestions only; not statutory planning or government approval.

A3-02 Three scopes

Research / overall design / key areas

43.6 km²

Coordinated research

Innovation chain checked by living circles; form people can walk, stay, and gather in.

11.4 km²

Overall design

Rail-park corridor centered; industry and services banded along it; intensity pending official files.

368.4 ha

Key areas

Three quarters at detailed depth: who uses them, daily use, dependencies, risks.

Chain

Problem → judgment

Each level maps to problem, judgment, layers, metrics, and risks.

A3-03 Three quarters

Research • Near-campus • Station Market

Research

Walkable park, managed tea

Evaluation inside the quarter; short and park paths open to the city; limit noise and night light.

Near-campus

Translation with living

Release and translation street beside food, short waits, daily goods; campus data needs authorization.

Station market

Way home and parlor

Transfer, waiting, through-routes, and short shopping first; events must not block the way home.

Risk

Shared limits

All buildings pending survey until ownership, heritage, and eco lines are ingested.

A3-04 Daily scenarios

Life-facing first • industry-facing later • human review required

Life-facing

S04 / S06 / S09 / S10

Gap guidance, shore stay, community daily-service street, event week yields to daily life.

Industry

S02 / S08 / S11

Safety sandbox, data parlor, low-speed delivery at research quarter and station market.

Translation

S01 / S07

Release hall and translation street at near-campus quarter; editorial and IP human final cut.

Governance

S12

After-action cabin for incidents only, not personal monitoring; medical/legal human fallback.

A3-05 Phasing & metrics

South home-and-transfer → mid living weave → north park edge and quiet

Phase 1

South home path

Slow pilots, four-quadrant station walking; event routes yield to daily through-movement.

Phase 2

Near-campus weave

Translation street and living ground floors side by side; E-W stitches to campus, station, housing.

Phase 3

Research ops

Park-edge openness with quiet strategies on the housing side; flood, energy, safety dependencies.

Metrics

Known / unknown

Area, green ratio, public-space ratio, footprints known; FAR unknown. Full recompute after official data.
