

Jingzhang Time-Traces: A 4D Elastic City Corridor

Spatial elastic interfaces: descend to touch a century of history, ascend to step into future time-space

One axis (9.7 km Digital Oasis spine) · three cores · three vertical layers · seven suture crossings · three Time-Trace landmarks

In 1909, Zhan Tianyou's switchback was the first 'physical spatial elastic interface' in Chinese railway history; in 1949 this track carried a historic turning point; in 2026 the HSR moves underground and the 9 km trace becomes a Digital Oasis. The scheme evolves in three steps across the 1909-2100 coordinate system: Heritage Consolidation (2026-2035), Three-Dimensional Reconstruction (2035-2070), Adaptive Habitat Loop (2070-2100+), with a 30% absolutely non-smart zone as the ethical red line.

Provisional-boundary statement: official red lines are unpublished; every drawing and metric is recomputed under EPSG:4548 from provisional rough polygons, for design generation, self-checking, and review discussion only; a full-chain recalculation is committed once official red lines arrive (A-BOUNDARY-001). Concept FAR is non-statutory (A-CONTROLS-001); '+300% efficiency / >=65% greening' are 2070-2100+ scenario targets (A-AOD-001); all elastic-interface engineering parameters are conceptual reservations (A-INTERFACE-001).

Overall design area & three key areas

One axis · three cores · three layers · seven crossings · three landmarks

Provisional rough boundary · EPSG:4326 exchange / EPSG:4548 areas · full recalculation after official redlines · concept, not statutory

Jingzhang Time-Traces — a 4D elastic corridor driven by spatial elastic interfaces

One axis

9.7 km Digital Oasis spine: track traces become native ecology and a heritage trail linking the three cores

Three cores

Zhongzhiyuan incubation · AI Origin vitality · Dazhongsi industry, evolving in gradient

Three layers

Aerial +100–300 m honeycomb corridors · surface/mid-air Digital Oasis + interfaces · underground compute corridor

7 crossings

East-west stitch crossings answering the >800 m spacing severance of crossing roads

3 landmarks

L1 Art Steps hub · L2 south gateway plaza · L3 Dazhongsi station forum

In 1909 Zhan Tianyou beat the mountain grades with the switchback line — the first 'physical spatial elastic interface' in Chinese railway history. This plan translates that wisdom into a charter for 2100: reserve interfaces for the future, let space grow with technology.

Jingzhang Time-Traces · 4D Elastic City Corridor | popzrq0215-png

~1,141 ha recomputed on the provisional boundary; one axis threads the momentum while three cores evolve in gradients — Zhongzhiyuan, AI Origin Community, Dazhongsi unfold along the Digital Oasis spine; seven suture crossings answer the 800 m severance.

Land-use structure of the overall design area

Complete partition · 0 m² gaps · 0 m² overlaps

Legend / land-use classes

- 05 Commercial
- 0701 Residential
- 0702 Community svc
- 0802 R&D
- 0803 Culture
- 0804 Education
- 1401 Park green
- 1402 Protective green
- 16 Reserve

Mix logic: R&D as body (35% sci-edu-culture) · oasis as soul (27% green)
· housing as base (21%) · services as face (14%) · reserve for change (2%)

- Layout notes
1. The Digital Oasis spine is class-1401 park green, the only unit crossing all 11 bands;
 2. Commercial land clusters at the south gateway, Dazhongsi and Origin east;
 3. R&D land groups at Zhongzhiyuan and Xueyuan Rd, pairing with campuses;
 4. Housing and community services line the west belt, mending old blocks;
 5. A 28-ha strategic reserve in NW Zhongzhiyuan — the institutional form of elastic-interface reservation — awaits official controls.

All 23 units share cut coordinates; the partition can be re-cut wholesale once official redlines arrive.

Provisional rough boundary · EPSG:4326 exchange / EPSG:4548 areas · full recalculation after official redlines · concept, not statutory

Jingzhang Time-Traces · 4D Elastic City Corridor | popzrq0215-png

23-unit full partition (0 gaps / 0 overlaps): research-education-culture (08) ~403 ha · green & open (14) ~303 ha · residential (07) ~245 ha · commercial (05) ~162 ha · strategic reserve (16) ~28 ha — the reserve institutionalizes elastic-interface reservation.

Detailed design of the three key areas

South core · industry | all-scenario AI, facade interfaces → vertical compute complexes

Landmark L3: Dazhongsi station forum
industry display & station commons
facade interfaces reserve 3D mobility

Announced 72.0 ha; deviation within provisional-boundary error

Middle core · vitality | 24 h maker salon + live-work, human-machine habitat lab

Landmark L1: Art Steps time-space hub
1949 station & switchback kept in place
descend to history, ascend to the future

Announced 104.3 ha; deviation within provisional-boundary error

North core · incubation | standard R&D + pilot base, 12 m × 12 m modular interfaces

Node: dual-mode station demo
15 m heavy-load deck; viewing deck now,
quantum compute + eVTOL vertiport later

Announced 192.1 ha; deviation within provisional-boundary error

— Digital Oasis spine — Stitch crossing — Micro-shuttle loop ★ Landmark / station ■ Concept massing (storeys) ■ Public space

Provisional rough boundary · EPSG:4326 exchange / EPSG:4548 areas · full recalculation after official redlines · concept, not statutory

Jingzhang Time-Traces · 4D Elastic City Corridor | popzrq0215-png

North core Zhongzhiyuan = innovation incubation (~193 ha, 12 m x 12 m modular interfaces) · middle core Origin Community = talent vitality (~104 ha, L1 Art Steps time-space hub) · south core Dazhongsi = industry agglomeration (~72 ha, facade interfaces to vertical computing complexes). All massings are concept demonstrations.

Slow-mobility network & blue-green system

9.7 km spine · 7 crossings · 319 ha green · 3 pocket parks

4D fluid mobility

Near term: micro-shuttle demo loop links the cores; far term: induction magnetic tracks + mobile cabins docking via 4 m × 4 m vertical shafts (concept reserve, A-INTERFACE-001).

Crossings as commons

Seven stitch crossings answer the >800 m road-spacing severance; markets and meeting places, not mere passages — crossing 03 hosts the campus commons.

Dual-mode stations

Innovation/energy stations at 500 m radius with 15 m heavy-load decks; viewing decks now, quantum compute + eVTOL vertiports later (20 stations = phased target).

Accessible Digital Oasis

Barrier-free throughout: scenario S01 offers live route advice and help response; usable without a screen is the baseline; the 30% non-intelligent zone keeps a pure walking experience.

9.7 km Digital Oasis spine	30.0 km Road network length	7 Stitch crossings
20 Stations (phased target)	27.9% Green share	5.3% Public-space share

Provisional rough boundary · EPSG:4326 exchange / EPSG:4548 areas · full recalculation after official redlines · concept, not statutory

Jingzhang Time-Traces · 4D Elastic City Corridor | popzrq0215-png

4D fluid multi-level transport: the 9.7 km Digital Oasis spine is continuous; road network ~30 km; a micro-shuttle demo loop links the three cores; dual-direction station prototype (15 m heavy-load platform); green space ~319 ha (27.9%); public space ~60 ha (5.3%).

Metric recalculation chain & evidence links

Official redlines released → full top-down recalculation

1,141 ha Design area ≈ announced 11.4 km²	27.9% Green share (concept) 319 ha · surface basis	5.3% Public-space share 60 ha	0.35 Concept FAR non-statutory
30.0 km Road network incl. crossings	0 m² Partition quality gaps / overlaps	unknown Statutory FAR awaiting controls	unknown Statutory height awaiting controls

Count commitments ↔ verifiable in text

AI scenario cards	12 (incl. 4 testing)	taskbook ≥ 10 / ≥ 3
Talent personas	6	required ≥ 5
Time-Traces landmarks	3: Art Steps · gateway · forum	all in public-space layer
Renewal projects	10	mapped to 3-step phasing
Stitch crossings	7	answering >800 m severance
Dual-mode stations	20	phased target, not recomputed

Provisional rough boundary · EPSG:4326 exchange / EPSG:4548 areas · full recalculation after official redlines · concept, not statutory

Jingzhang Time-Traces · 4D Elastic City Corridor | popzrq0215-png

Every known metric recomputed from GeoJSON under EPSG:4548; statutory FAR and height are explicitly unknown. Counts: 12 scenario cards (4 testing) · 6 personas · 3 Time-Trace landmarks · 10 renewal projects · 7 suture crossings. All long-range claims are registered as scenario-target assumptions.

Machine-readable evidence chain

Machine-readable evidence chain: proposal.md / proposal.en.md · metrics.json (29) · sources.json (14) · assumptions.json (9) · compliance/standard/design_depth matrices · 9 GeoJSON layers · self_check.json

Provisional-boundary statement: official red lines are unpublished; every drawing and metric is recomputed under EPSG:4548 from provisional rough polygons, for design generation, self-checking, and review discussion only; a full-chain recalculation is committed once official red lines arrive (A-BOUNDARY-001). Concept FAR is non-statutory (A-CONTROLS-001); '+300% efficiency / >=65% greening' are 2070-2100+ scenario targets (A-AOD-001); all elastic-interface engineering parameters are conceptual reservations (A-INTERFACE-001).
