

Jing-Zhang AI: People, City, Shared Endeavor

One action map for the civic spine, three key areas, and three spatial tests.

Three spatial tests

M / A are concept fields; P1–P3 are three candidate check anchors.

- M

Mixed and incremental renewal

M / Fig. 02: shared active edge
- A

Low-carbon access network

A / Fig. 04: walking and civic service
- P

Stayable public life

P1–P3 / Fig. 03: paired with areas 01–03

Spatial key

- Key-area number

01 / 02 / 03
- Concept linkage fragment

Verify roads, entrances, and crossings
- M mixed renewal

■

A access network

■

P public life

M/A are OSM-aligned concept fields; P1–P3 are candidate check anchors, and none is a parcel.
- Provisional overall extent (not parcel/redline)

From spatial moves to use decisions

Three figures, three anchors, one reviewable design loop.

- 01

Mix first

Fig. 02 / M

Bring different uses together at an active public edge.

Advance only when verify use, ground-floor activity, and building condition.
- 02

Make it walkable

Fig. 04 / A

Make walking and civic service the precondition for AI.

Advance only when verify entrances, streets, crossings, and barriers.
- 03

Observe first

P1–P3 / areas 01–03 in Fig. 03

Use candidate anchors to organise observation; decide stayable public space only after validation.

Advance only when complete anonymised aggregate staying observation locally.

Design quantities

Overall area	Green	Public space	Key areas
11,412,825 m²	12.3%	7.3%	3
