

AI FOR ALL: a city designed for the AI-native first generation

Jing-Zhang AI Innovation Belt · One Belt, Three Cores, One Origin

1909 technological autonomy → 2026 technology for the people

National infrastructure × personal silicon companion · the agent is the interface of the AI-native generation

A city that lets the next generation grow
from “meeting AI” to “creating AI” along the century-old rail.

S1 AI-native school Zhongzhiyuan · pilot	S2 Open-source testbed Zhongzhiyuan · sandbox
S3 AI creation workshop Zhongzhiyuan · concept	S4 First-companion ceremony Origin Community · sandbox
S5 AI after-school care Origin Community · pilot	S6 AI city guide Heritage Park · concept
S7 AI eldercare Origin Community · pilot	S8 AI health pre-check Dazhongsi · sandbox
S9 Companion station All stations · pilot	S10 Companion-direct consumption Dazhongsi · sandbox
S11 AI government handling All stations · sandbox	S12 Human-Agent Commons Dazhongsi / park · sandbox

People, public-space components and the governance promise

Six user personas

P1 Child

P2 Family

P3 Elderly

P4 Developer

P5 Visitor / low digital skills

P6 AI-refusing user

Seven public-space components

Agent kiosk

Audit / consent terminal

AI discussion pavilion

Open-source showcase

Companion station

Accessible human-service point

AI Origin Plaza

Three AI pilgrimage landmarks

L1 AI Origin

first companion ceremony · AI Origin Plaza

L2 Open-source smart wall

agent / developer / model contribution · Zhongzhiyuan

L3 Human-Agent Commons

co-creation · Dazhongsi / Heritage Park

Governance evidence chain

Personal data → Consent → Minimum required data → Agent processing → City service call → Audit log → Human review → Delete / migrate

High-risk cases keep human final judgement: minors, health, elderly care, government handling and property decisions.

Agent First, Never Agent Only

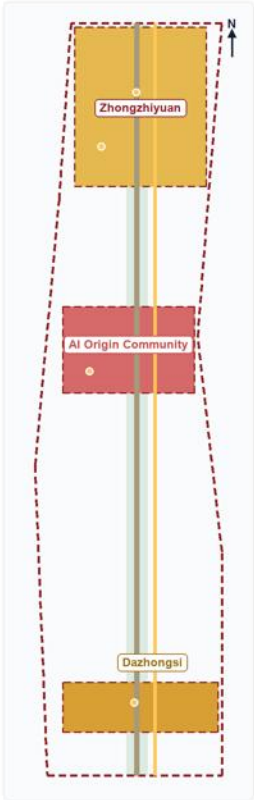

The city opens companion-direct interfaces, but every resident can choose public terminals or equivalent human service. Data minimisation, revocable permissions, full audit trails, independent review and appeal are spatial infrastructure, not afterthoughts.

One Spine, Three Cores, One Origin

The overall design area is a provisional design discussion, not an official redline.

Jing-Zhang AI Innovation Belt · Contextual Site Overview

Provisional design diagram · English labels only · public context · proposal geometry

Existing / design roads
Greenway / slow mobility spine
SITE_BOUNDARY (provisional)
KEY_AREAS (conceptual placement)
Public-space anchors (proposal)

Provisional geometry · conceptual placement · recompute after official polygons are released

Three growth stations

Zhongzhiyuan · 192.1 ha

AI kindergarten to lab · open-source research, education and public science

AI Origin Community · 104.3 ha

AI growing-up community · family, care, council pavilions

Dazhongsi · 72.0 ha

AI living market · companion-direct consumption and new formats

Spatial translation: a heritage-park spine links a northern research / education station, a middle growing-up community and a southern living market.

Stage-Gate delivery and annual operations

Sandbox (hypothesis + safety baseline) → Pilot (bounded trial + human takeover) → Evaluate (independent review) → Deploy / Stop (public notice) –

Nine annual operating mechanisms

ID	Mechanism	Lead / partners	Output	Spatial node
M1	Origin Day + open-source awards	District operator	ritual + showcase	Origin Plaza
M2	Developer / Agent community	District + civic committee	code / model / document	testbed
M3	Public API Challenge	District + government	city service	Human-Agent Commons
M4	City-market public test	District + owner	scenario report	Dazhongsi
M5	Children AI Origin programme	District + education partners	growth portfolio	school / plaza
M6	International developer camp	District + international partners	cross-border co-creation	open testbed
M7	Enterprise testbed opening	District + enterprises	adaptation results	Zhongzhiyuan
M8	Open-result release	District + community	release + civic app	open showcase
M9	Civic governance + safety audit	District + independent reviewers	annual report + appeal	pavilions

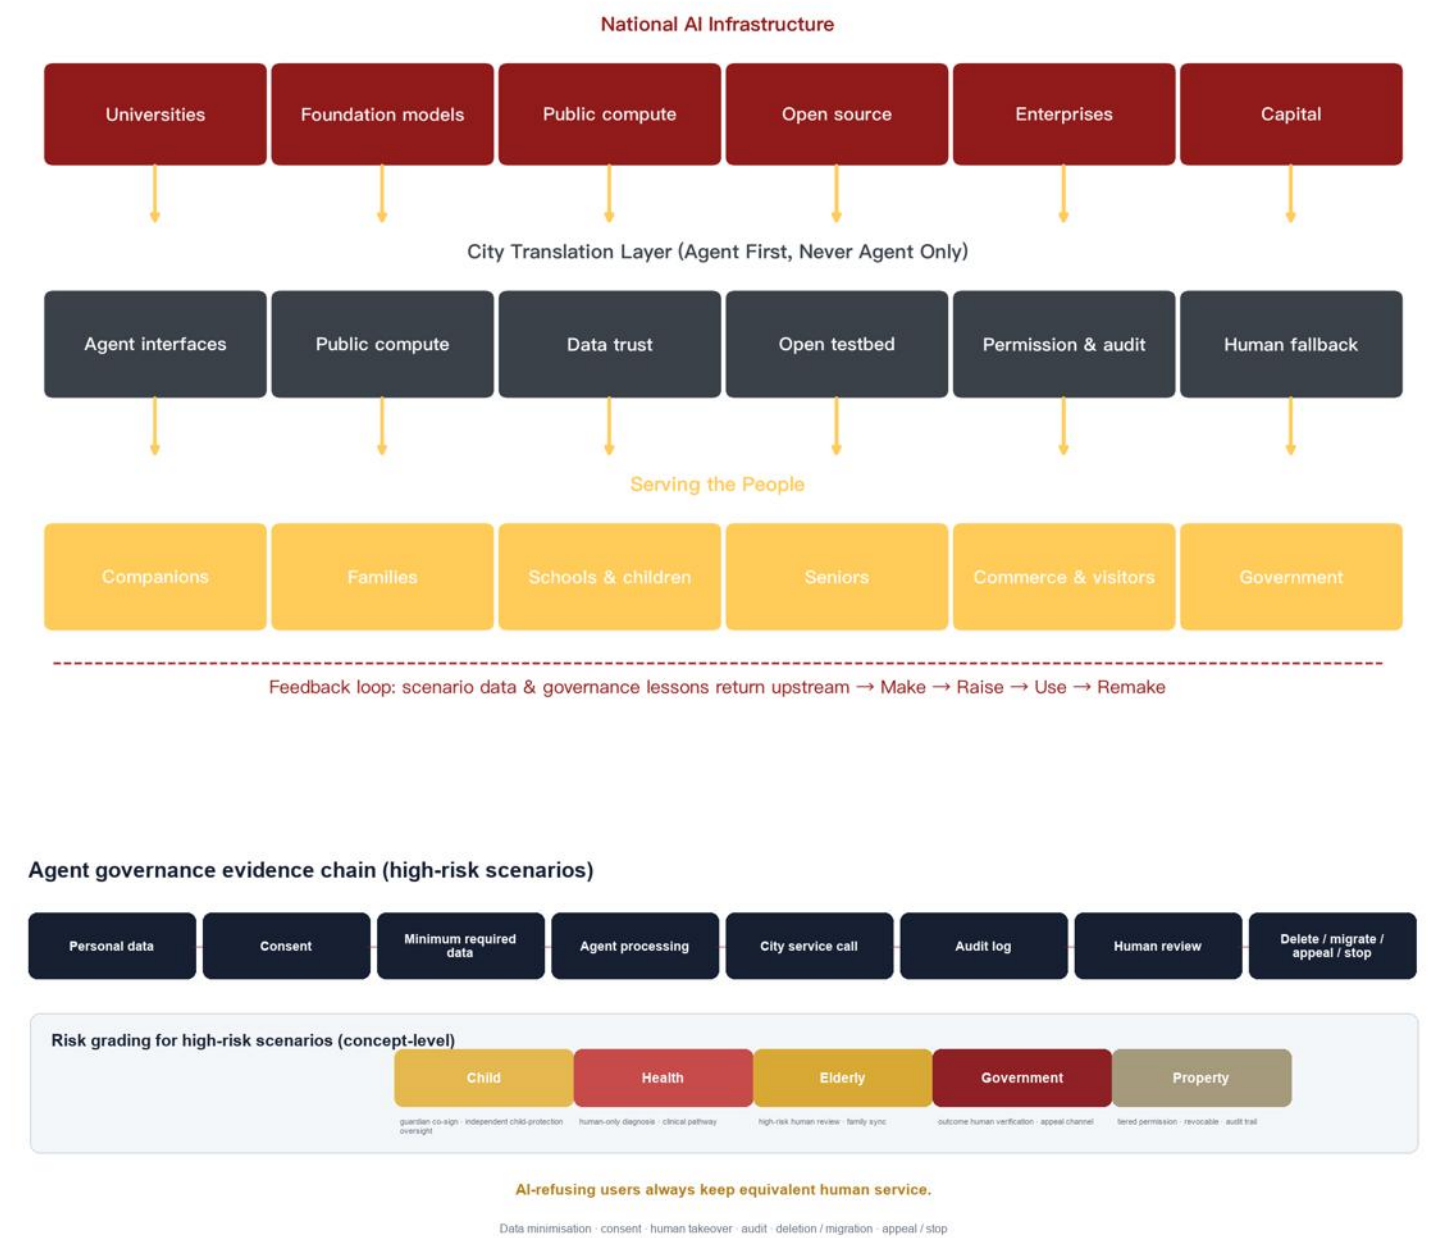

Implementation rule

Every mechanism is a proposal placeholder. Funding, operators, procurement, capacity, regulation and statutory approvals remain subject to later professional confirmation. The package reports a concept-level operating loop, not a signed delivery commitment.

Phasing window

Dual-track innovation ecology and accountable agency

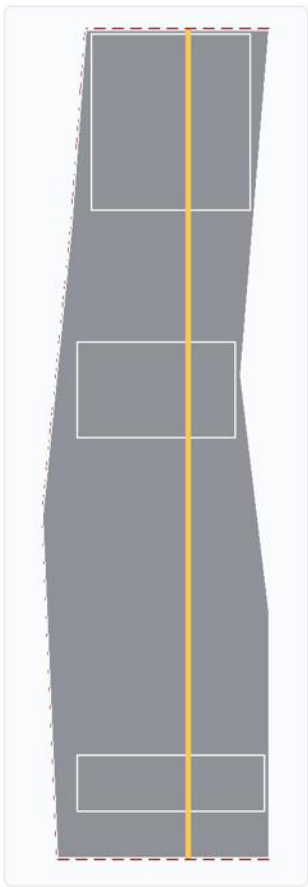

National infrastructure → city translation layer → personal services

The proposal treats public compute, open interfaces, data trust, testbeds, permission and human fallback as a city translation layer. The feedback loop returns scenario data and governance lessons upstream. This is the difference between an AI spectacle and an accountable civic interface.

Land use, provisional metrics and recomputation

Land-use Structure & Growth Spine (conceptual · provisional)

Land-use mix (proposal, provisional)

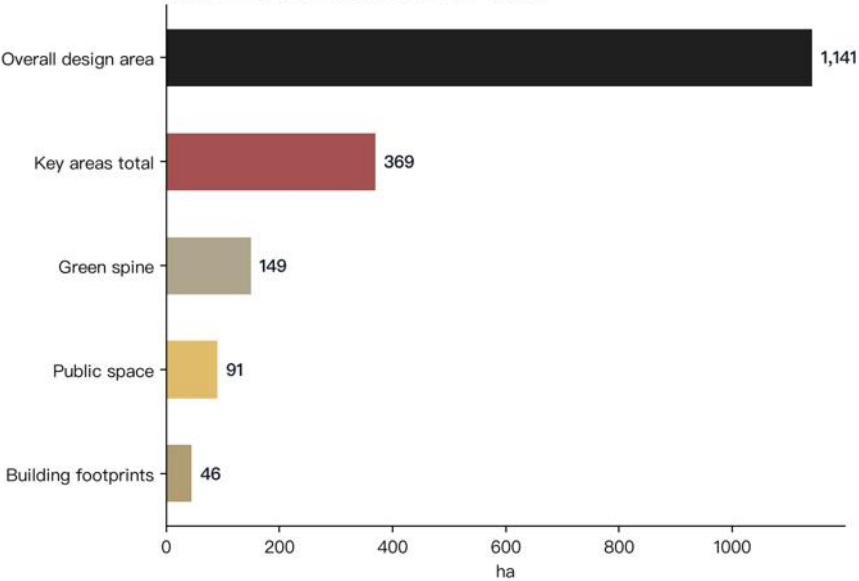

16	Reserved / future study land	67.6%
0802	AI R&D / innovation	11.9%
0701	Residential support	9.2%
0804	AI-native education	3.7%
1401	Park / green space	3.2%
05	Companion-direct commerce	2.5%
0702	Community service facilities	1.8%

Existing / context vs proposal

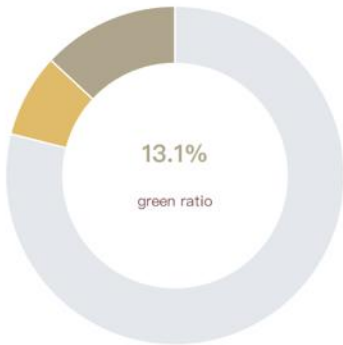

Existing: roads / rail / water / parks
Proposal: designed land use
--- SITE_BOUNDARY (organizer provisional)

! provisional warning
Codes are shown with complete category names. Areas and ratios are recomputed on provisional geometry only; not an approval conclusion.

Metric System and Evidence Chain

Unit: hectares (ha) · recomputed on provisional boundary · v5

All areas and ratios are generated from provisional geometry and must be recomputed when official polygons arrive.

AI+ scenario system: 12 cards, 4 test gates, 6 personas

Each card carries users, pain point, Agent role, data minimum, human takeover, failure handling, exit mechanism, metrics, operator, space and stage.

Scenario	Station	Spatial carrier	Stage
S1 AI-native school	Zhongzhiyuan / Origin	AI-native classrooms	pilot
S2 Open-source testbed ☐	Zhongzhiyuan	testbed + public compute	sandbox
S3 AI creation workshop	Zhongzhiyuan	science museum	concept
S4 First companion ceremony	Origin	AI Origin Plaza	sandbox
S5 AI after-school care	Origin	companion station	pilot
S6 AI city guide	Heritage Park	guide terminals	concept
S7 AI elderly care	Origin	senior corner	pilot
S8 AI health pre-check ☐	Dazhongsi / community	community AI clinic	sandbox
S9 Companion station desk	All stations	station counter	pilot
S10 Companion-direct consumption ☐	Dazhongsi	consumption street	sandbox
S11 AI government handling	All stations	council pavilion	sandbox
S12 Human-Agent Commons ☐	Dazhongsi / park	commons pavilion	sandbox

Test gates

S2 / S8 / S10 / S12 each include a hypothesis, bounded pilot scope, safety threshold, stop condition, rollback and evaluation window. Human final judgement is reserved for minors, health, property and other high-risk decisions.

Flagship pilots: RACI and implementation requirements

No fabricated government commitments. Roles are proposed placeholders; funding is a concept-level cost class.

Pilot	R / A / C / I essentials	Prerequisite · regulatory · data	Funding · procurement · ops	Entry · success · failure	Takeover · stop · rollback
S4 Child ceremony	R: on-site staff · A: Origin community operator · C: education district · I: parent reps	contract compliance; data protection; identity anchor; guardian co-sign	public service + public fund; proposed; ops Low	complaint >2% or privacy event >0 fails	staff present; instant reset; zero-cost exit; quarterly eval
S1 One-companion school	R: teacher · A: pilot school · C: district education bureau · I: parent council	school authorisation; parental consent; child protection	education budget + CSR; proposed; ops Medium	teaching-scope review; privacy event >0 fails	teacher takeover anytime; human-only course exit
S2 Open-source testbed	R: reviewer · A: testbed committee · C: park operator · I: resident teams	license verification; safety baseline; isolated test data	park ops + public compute; proposed; ops Medium	escape test passed; leak fails	quarterly review; stop after no output
S8 Health pre-check	R: GP · A: community health centre · C: district health commission · I: patient reps	medical authorisation; ethics review; minimal pre-check fields	public health budget; proposed; ops Medium	clinical pathway review; any miss fails	diagnosis human-only; stop on miss; delete data
S10 Companion-direct consumption	R: merchant · A: Dazhongshi operator · C: commerce bureau · I: consumer reps	interface protocol review; dispute rules; consumer rights	market-based; platform entry proposed; ops Low	interface security review; complaint >1% fails	parallel human counter; street exit
S12 Human-Agent Commons	R: on-site coordinator · A: commons committee · C: district commission · I: citizen reps	incubation rules; generative-AI complaint channel; anonymized sessions	public + market mix; outsourced ops proposed; ops Medium	proposal review; infringement >0 fails	manual supervision; public stop notice

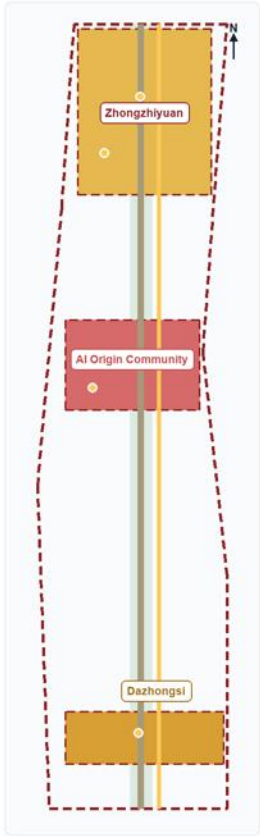

Accessibility checklist

Readable contrast · non-colour-only encoding · alt text · static document flow · no-device path · physical human-service points · mobility access · audio / visual alternatives · plain-language explanations · parallel human counter.

Mobility, green-blue structure and evidence boundaries

Mobility, Blue-Green & Public Space

Design context · greenway / slow spine / public anchors

- Major / local roads (context)
- Rail / heritage corridor
- Greenway / slow spine
- AI growth spine (proposal)
- Public-space anchors (proposal)

Design context only · provisional boundary · no statutory redline

Slow mobility as the public spine

The heritage-park greenway links the three stations. Traffic-calmed streets, companion-handled connections and autonomous micro-circulation are concept-level pilots, not construction commitments.

Evidence and data gap

Official SITE_BOUNDARY and KEY_AREA polygons have not been released. The package uses provisional geometry for visualisation and temporary recomputation only. Planning controls, ownership, heritage limits, utilities, transport surveys and capacity data remain to be confirmed by a professional team.

Publicly reported reality anchor

The Jing-Zhang Heritage Park references are used as a publicly reported context anchor. They do not certify an official redline, approval, signed cooperation or current implementation readiness for this proposal.

Recompute trigger

When the organizer releases versioned official polygons with CRS and applicability notes, replace provisional layers, recalculate areas / ratios / charts, and update both language editions.

Community-display-only · concept-level · subject to approval
