

THE PASSING LOOP — Overall Concept

One line · three passing stations · two wings | Single-track passing order for the AI Innovation Belt

Four-layer passing mechanism

1. Fast-slow: separate through-routes from experience belts; off-peak running diagram
2. Human-machine: pedestrian priority default; robots pass a yielding test
3. Data: authorise-use-return-review loop; public over personal, public over commercial
4. Scenario: public space time-shared on bookable service timetables

Metric
Overall design area
Green ratio
Public space ratio
Building density (concept)
Key-area total
Road network length
FAR (pending official)

Three Key Areas · Passing Stations

What opens · renewal handle · operating protocol

North · Zhongzhiyuan Acceleration (≈192 ha)

Acceleration passing: R&D × testing × governance; open test ground, safety sandbox, Qinghe corr

Middle · AI Origin Community (≈104 ha)

Origination passing: research × conversion; campus stitching, publishing hall, conversion stree

South · Dazhongsi Industry Cluster (≈72 ha)

Urban passing: industry × commerce × rail; four-quadrant connectivity, roadshow hall, data salo
