mobility

27.46 km

walk-cycle network

forecast

78-82

calibrated, not jury score

UNKNOWN IS A PROFESSIONAL LAYER: official redline, control plan, ownership, survey, fire, traffic, utilities, cost and public participation remain verification gates.

Three key areas - plan, section, ground floor and operation

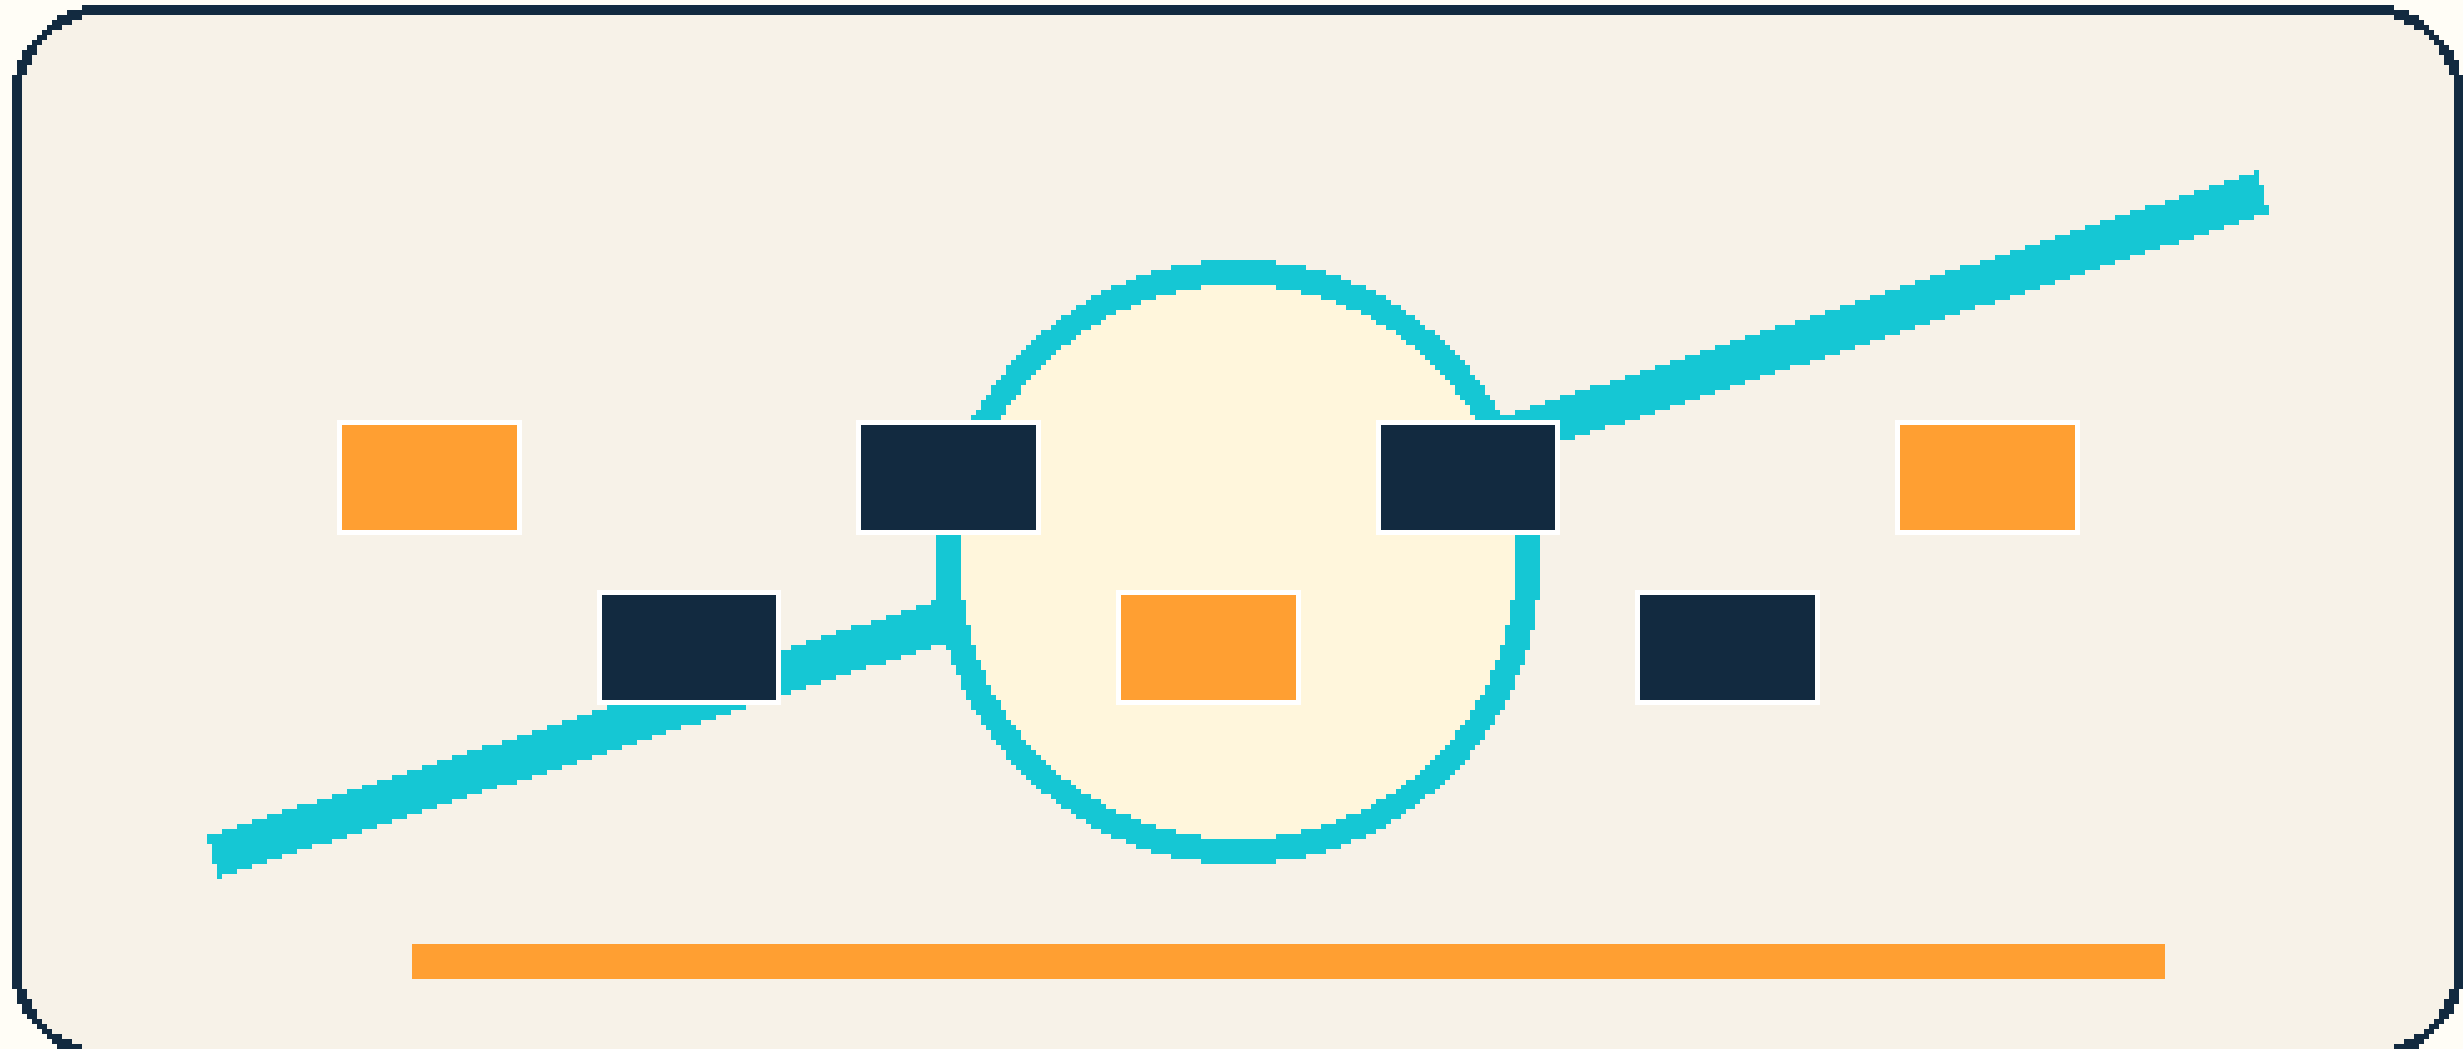

02 / key areas

Each key area is drawn as a mini urban-design proposal, not a matrix card.

01 North Protocol Court

low-density test campus

PLAN

retained fabric + public frontage + civic court

SECTION

GROUND INTERFACE

Every experimental frontage must provide a non-digital bypass and visible human steward.

G0-G4

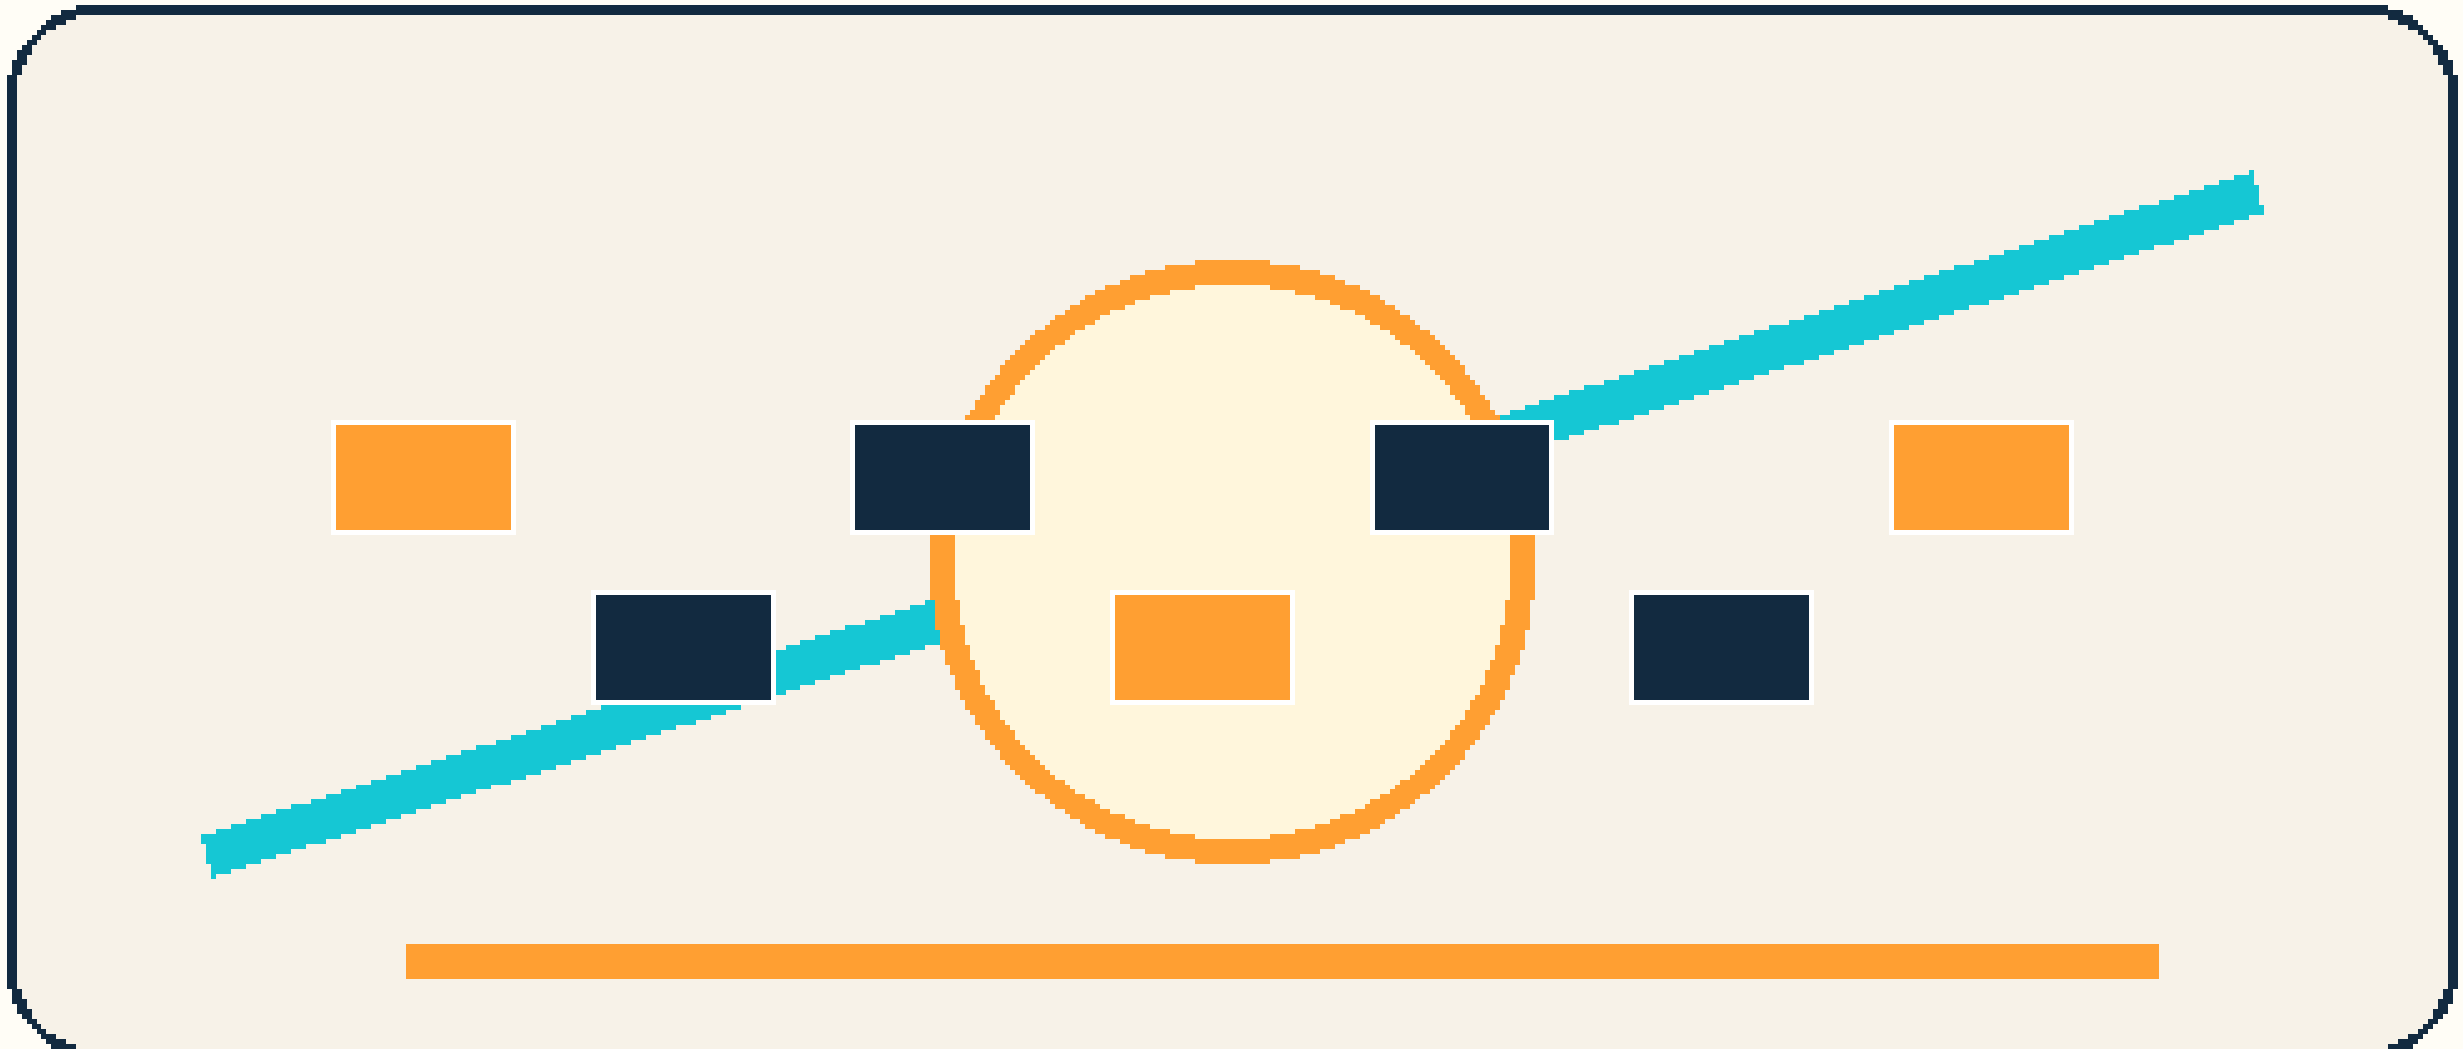

Preserve rail-industrial edges, insert small test yards, open ground-floor labs to public review windows.

02 Central Origin Open-Source Station

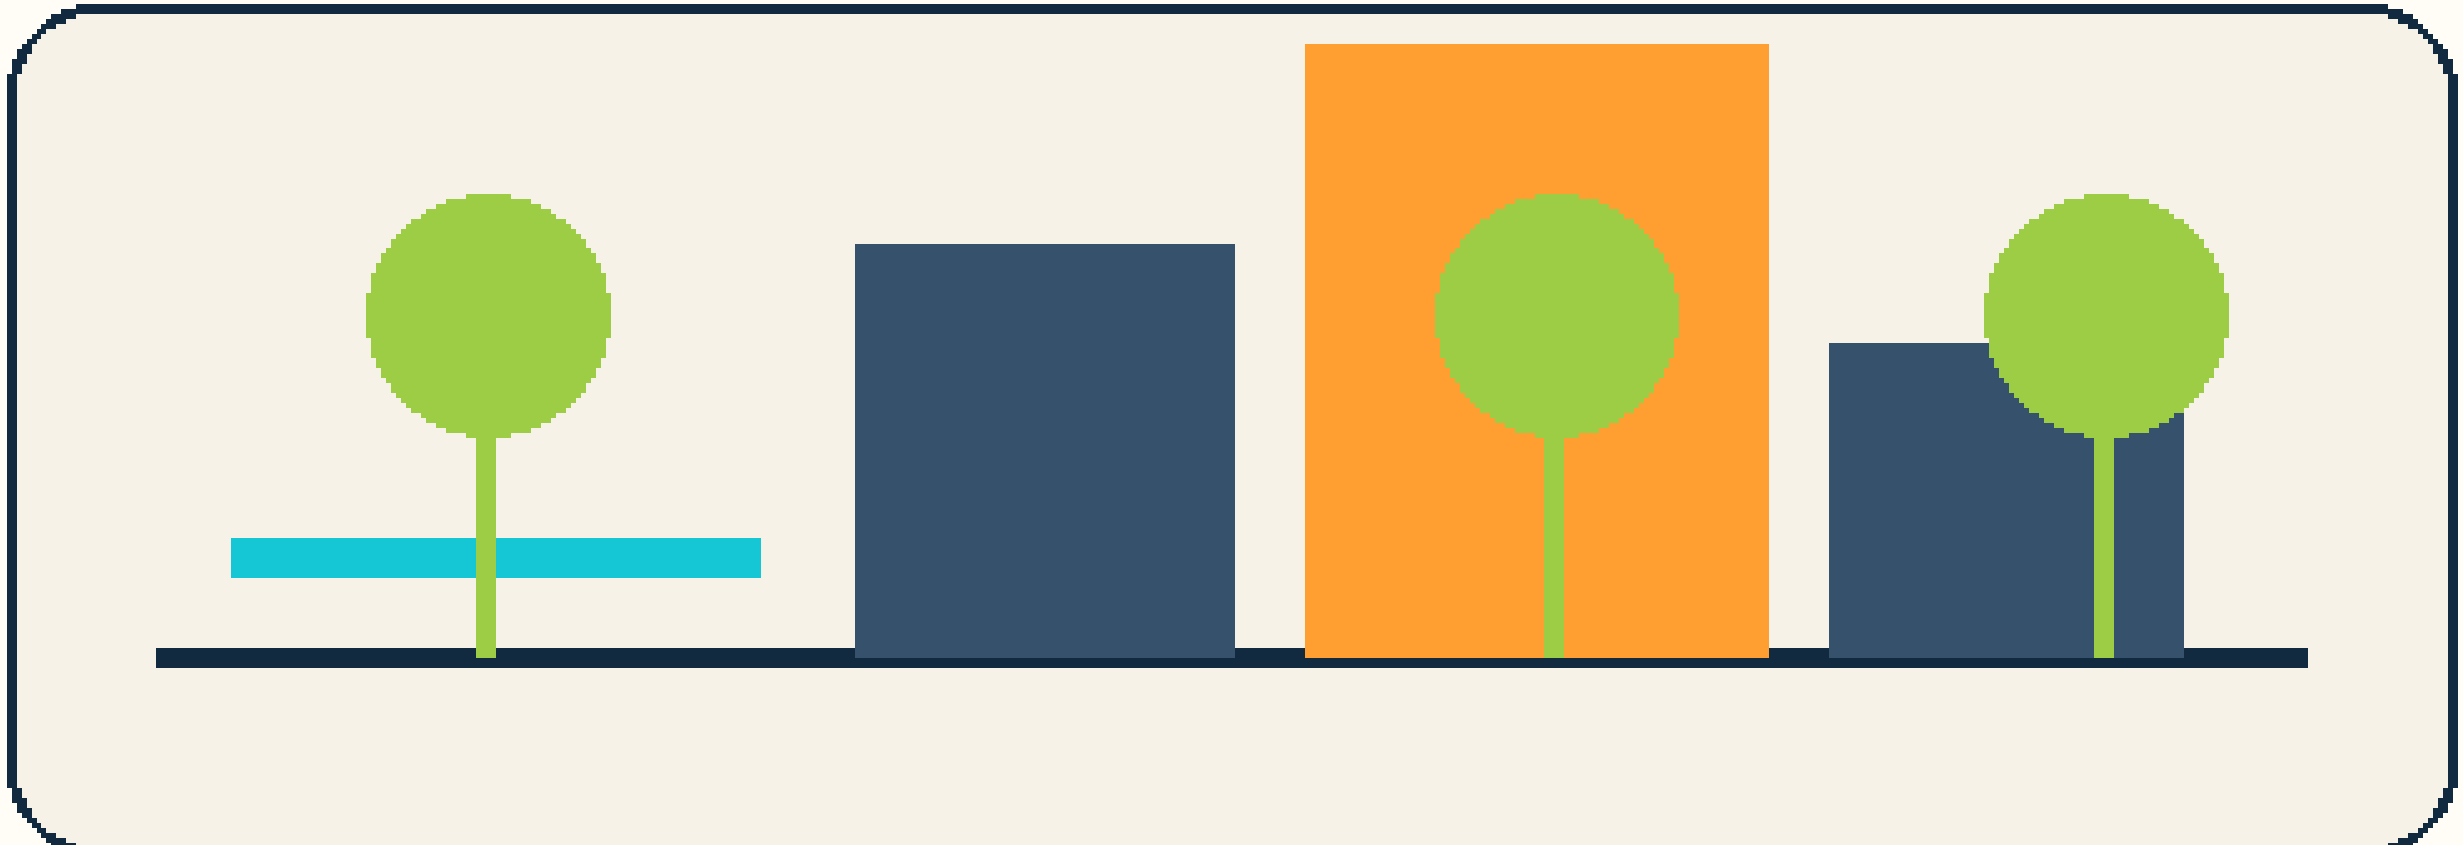

diagonal exchange hall

PLAN

retained fabric + public frontage + civic court

SECTION

GROUND INTERFACE

Ground-floor public interface must support free passage even when events or AI tests are closed.

G0-G4

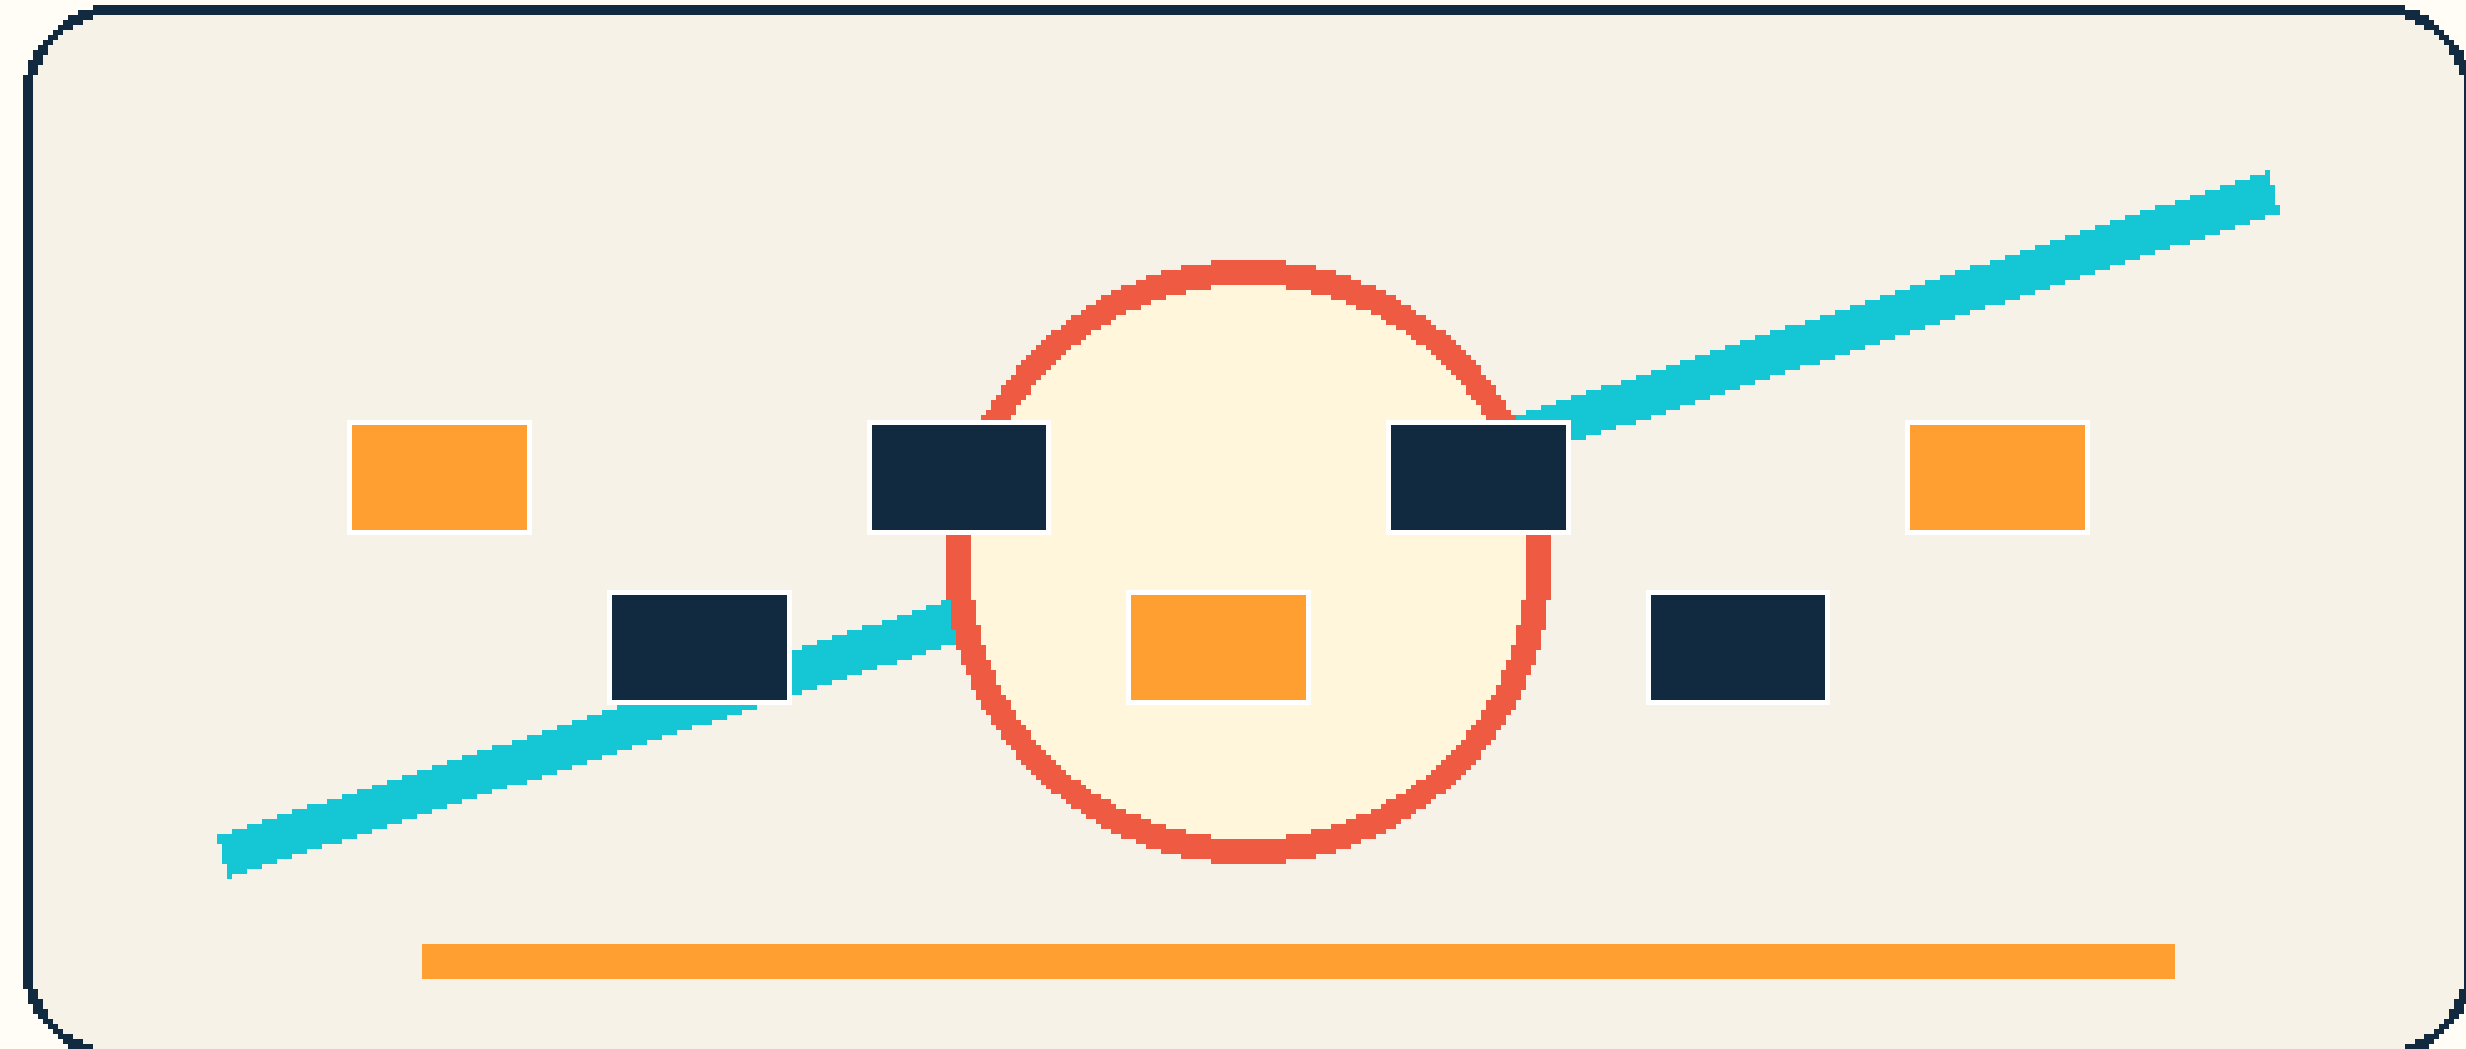

Use a diagonal public hall to connect campus, community, start-up interface, and railway memory.

03 South Dazhong Future Plaza

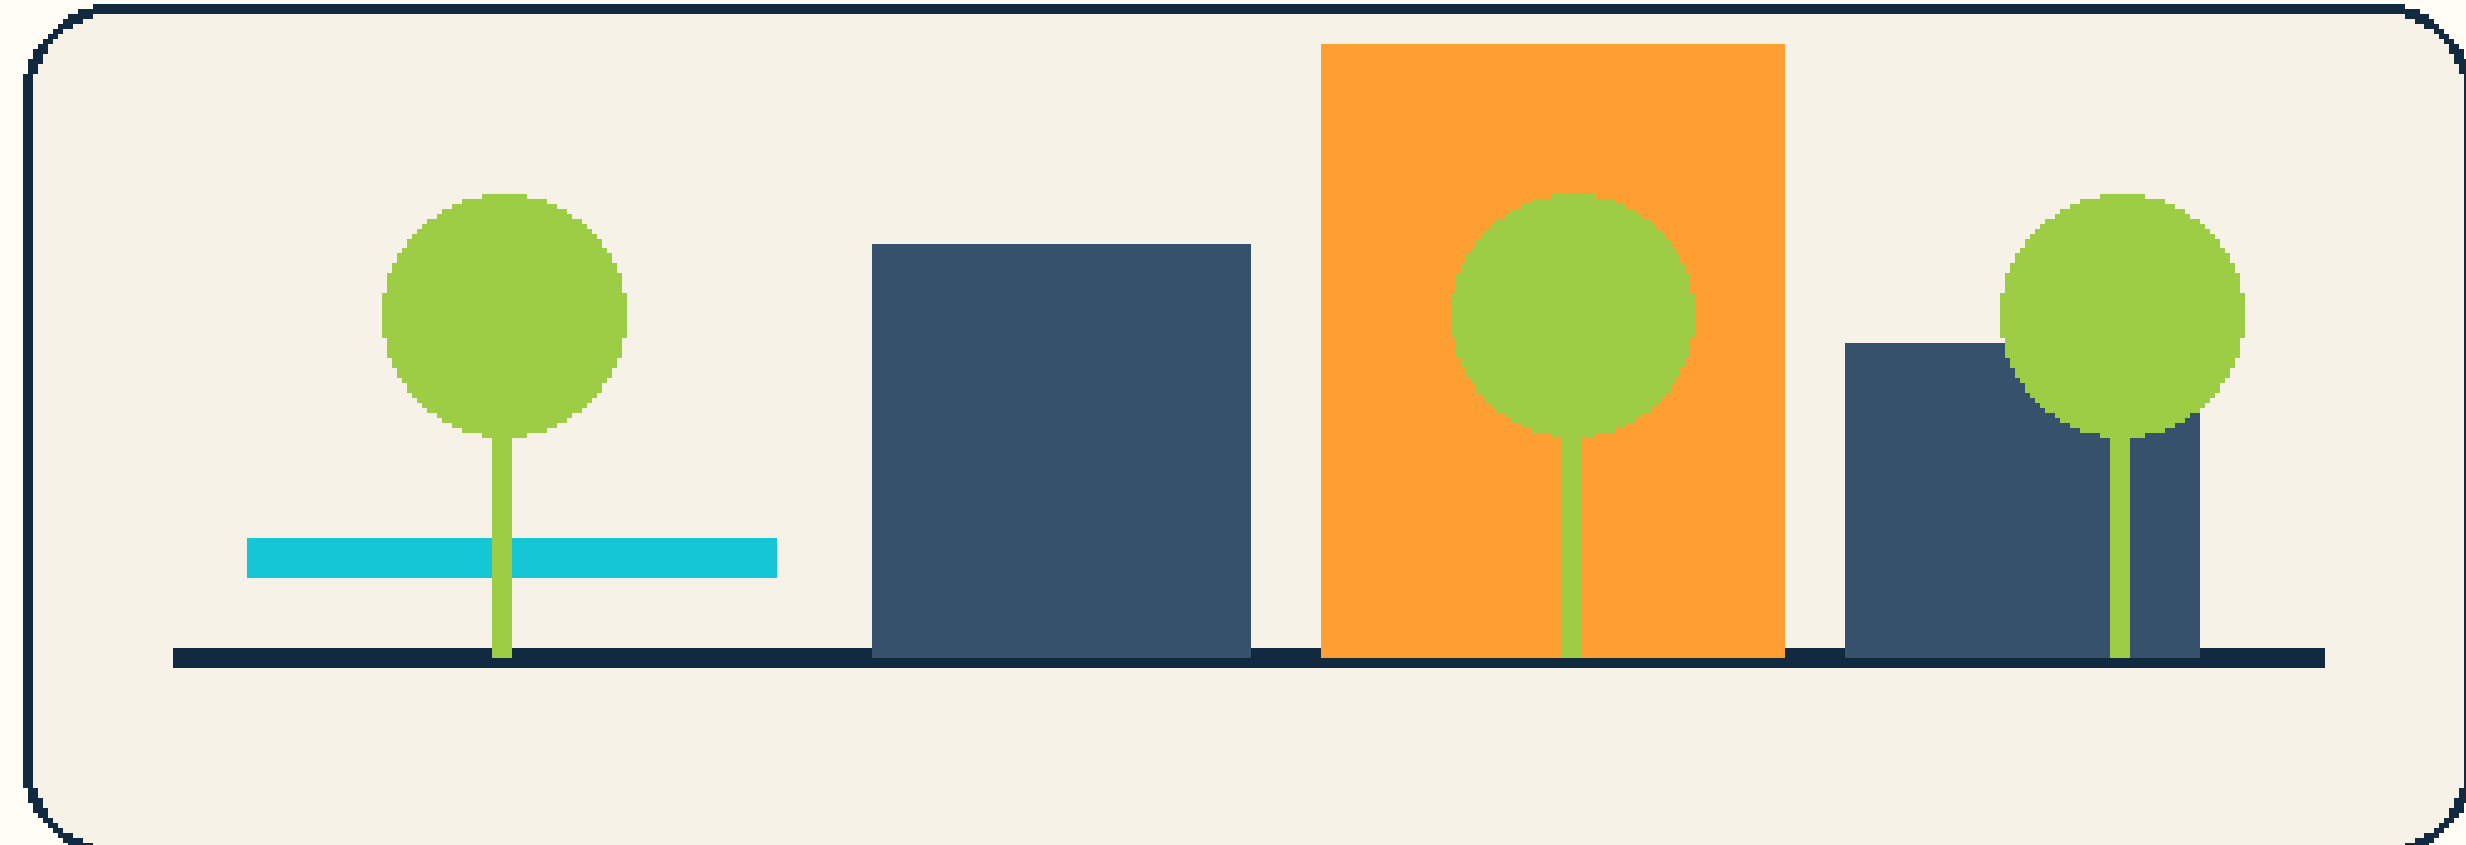

station-city double hall

PLAN

retained fabric + public frontage + civic court

SECTION

GROUND INTERFACE

High-intensity demonstration uses are allowed only when daily public services keep priority at ground level.

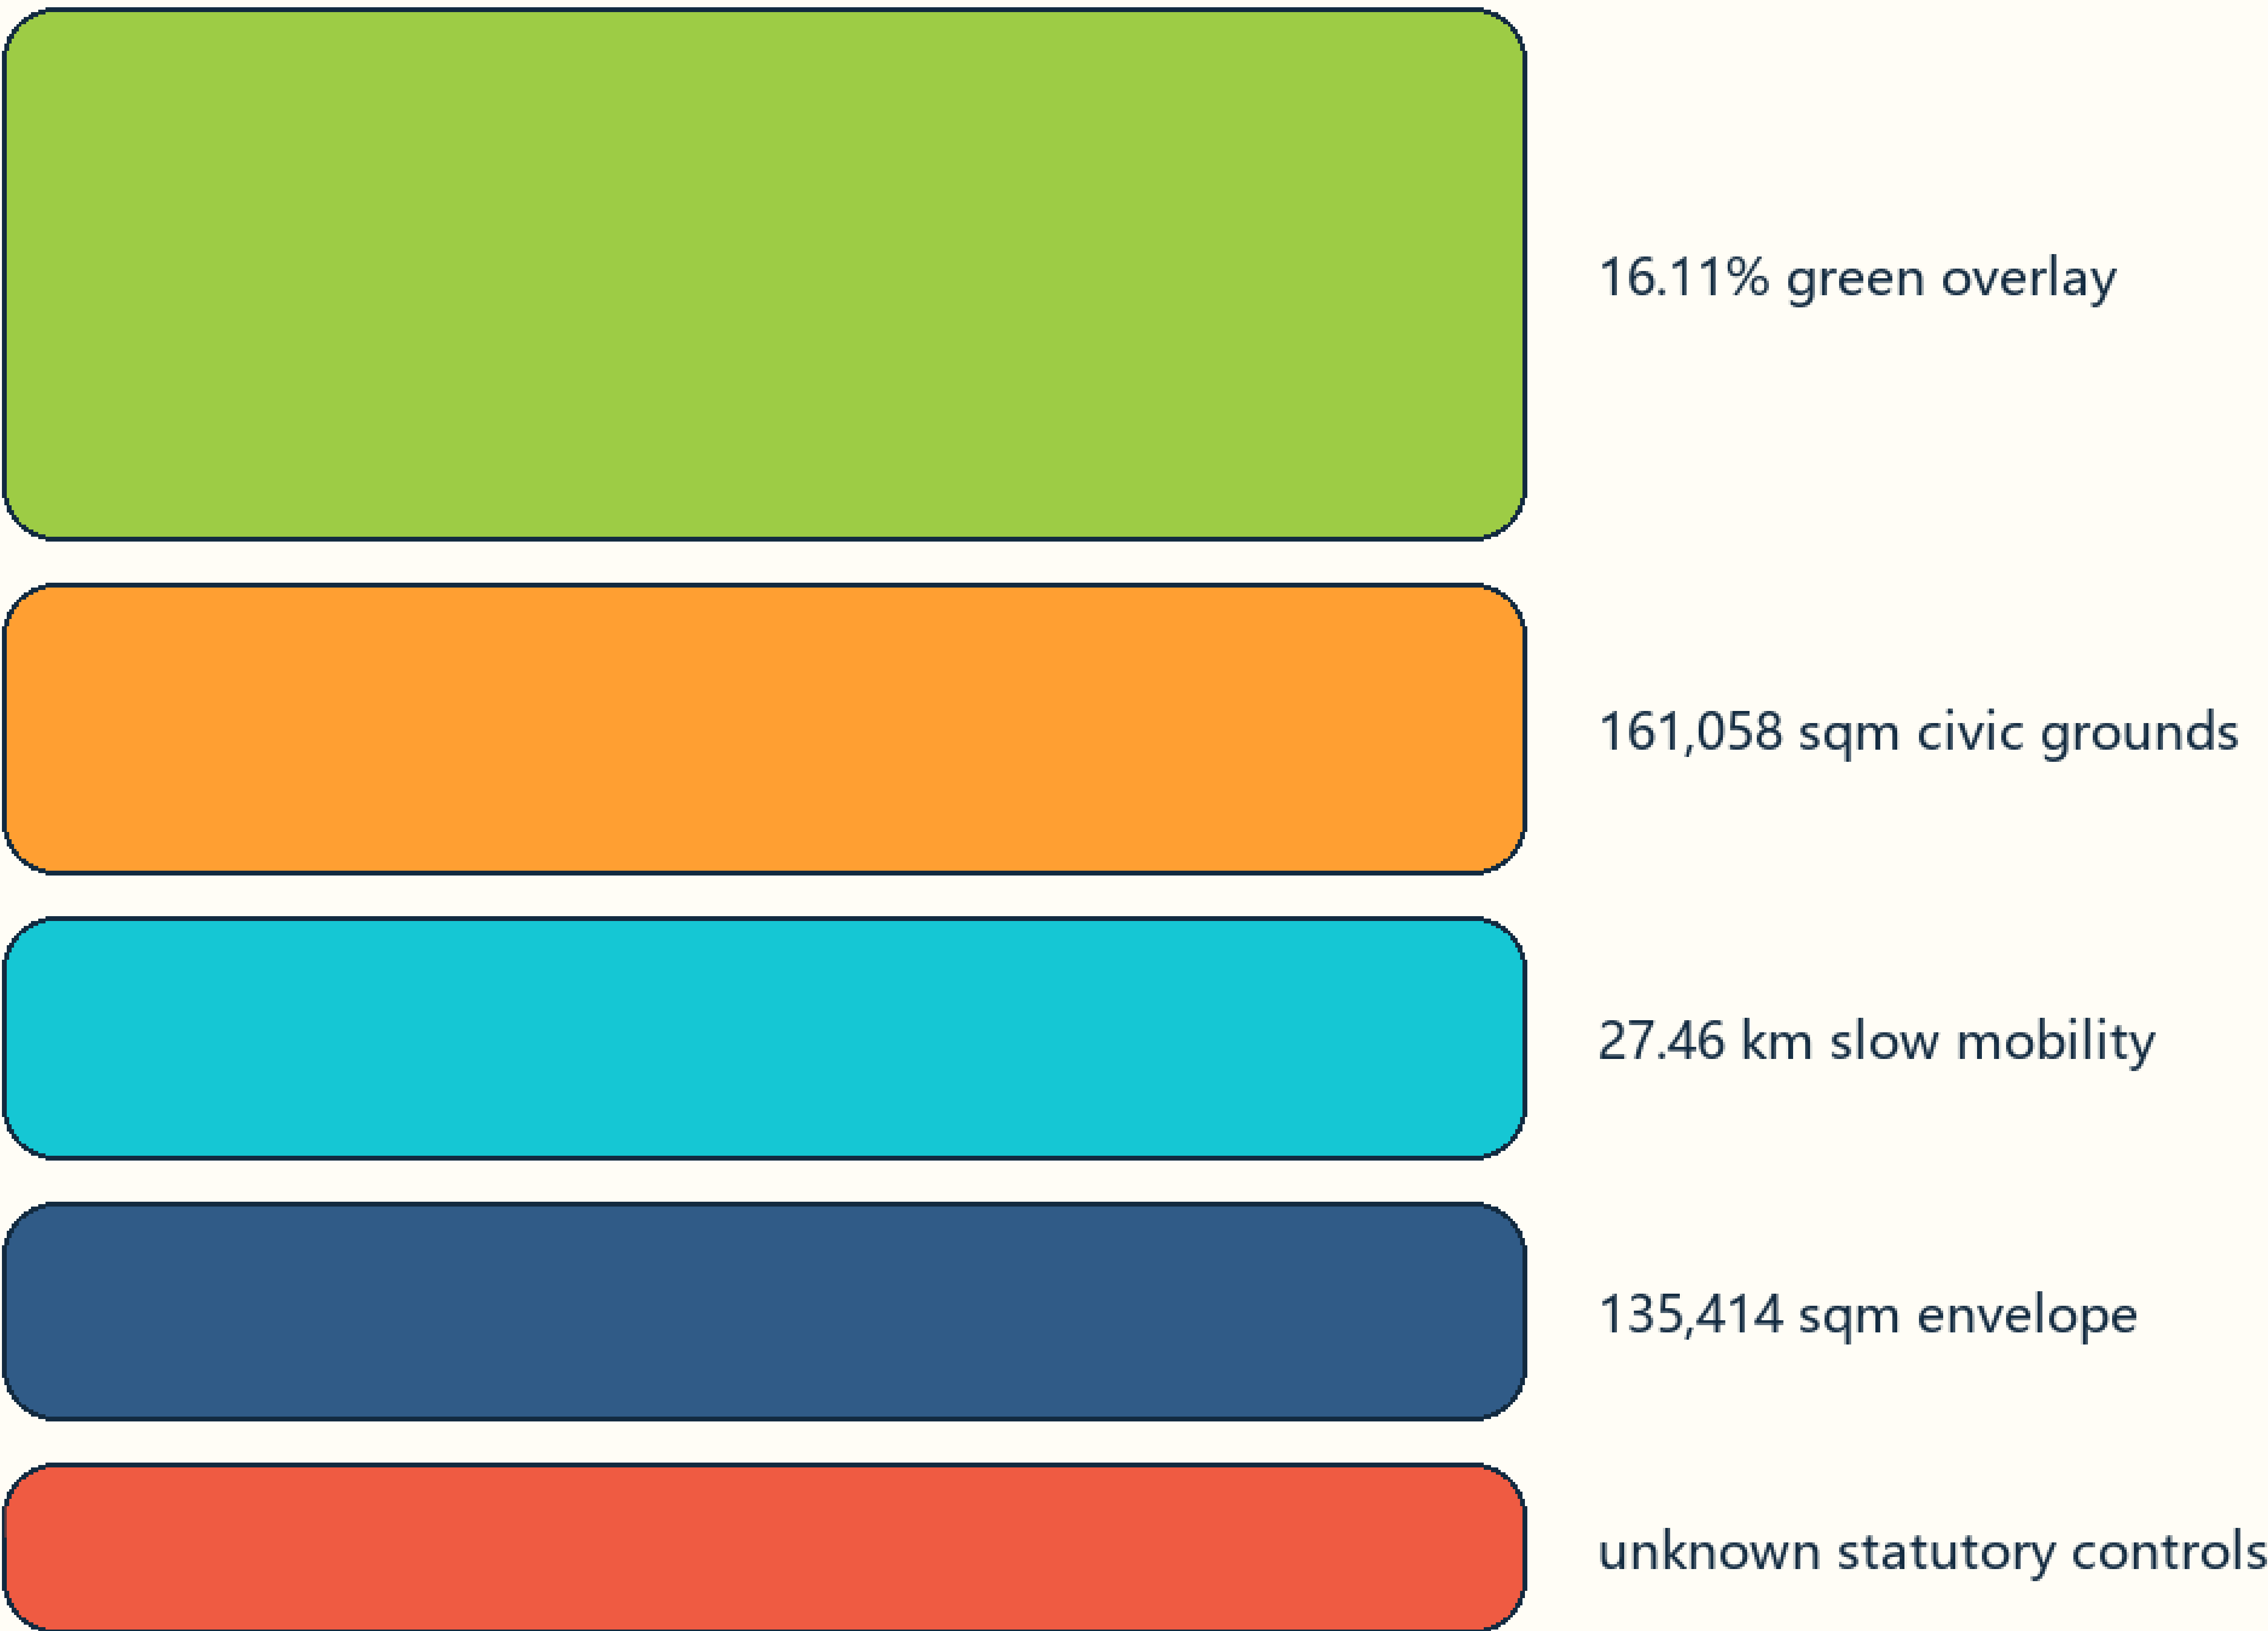

G0-G4

Create a station-city civic plaza where international exchange, daily service, and demonstrator projects share one public ground.

The drawing separates known concept geometry from controls that must be verified.

SPATIAL ALLOCATION

CONTROL TABLE

provisional_site_area	11.413 km2

unknown_controls	FAR / height / fire / cost
must verify	

Station, bridge, street, courtyard and ground floor are tested as one public-access network.

NETWORK EVIDENCE

length

27.46 km

~~conceptual walk-cycle network~~

density

0.24%

~~km per km² equivalent~~

shade

UNKNOWN

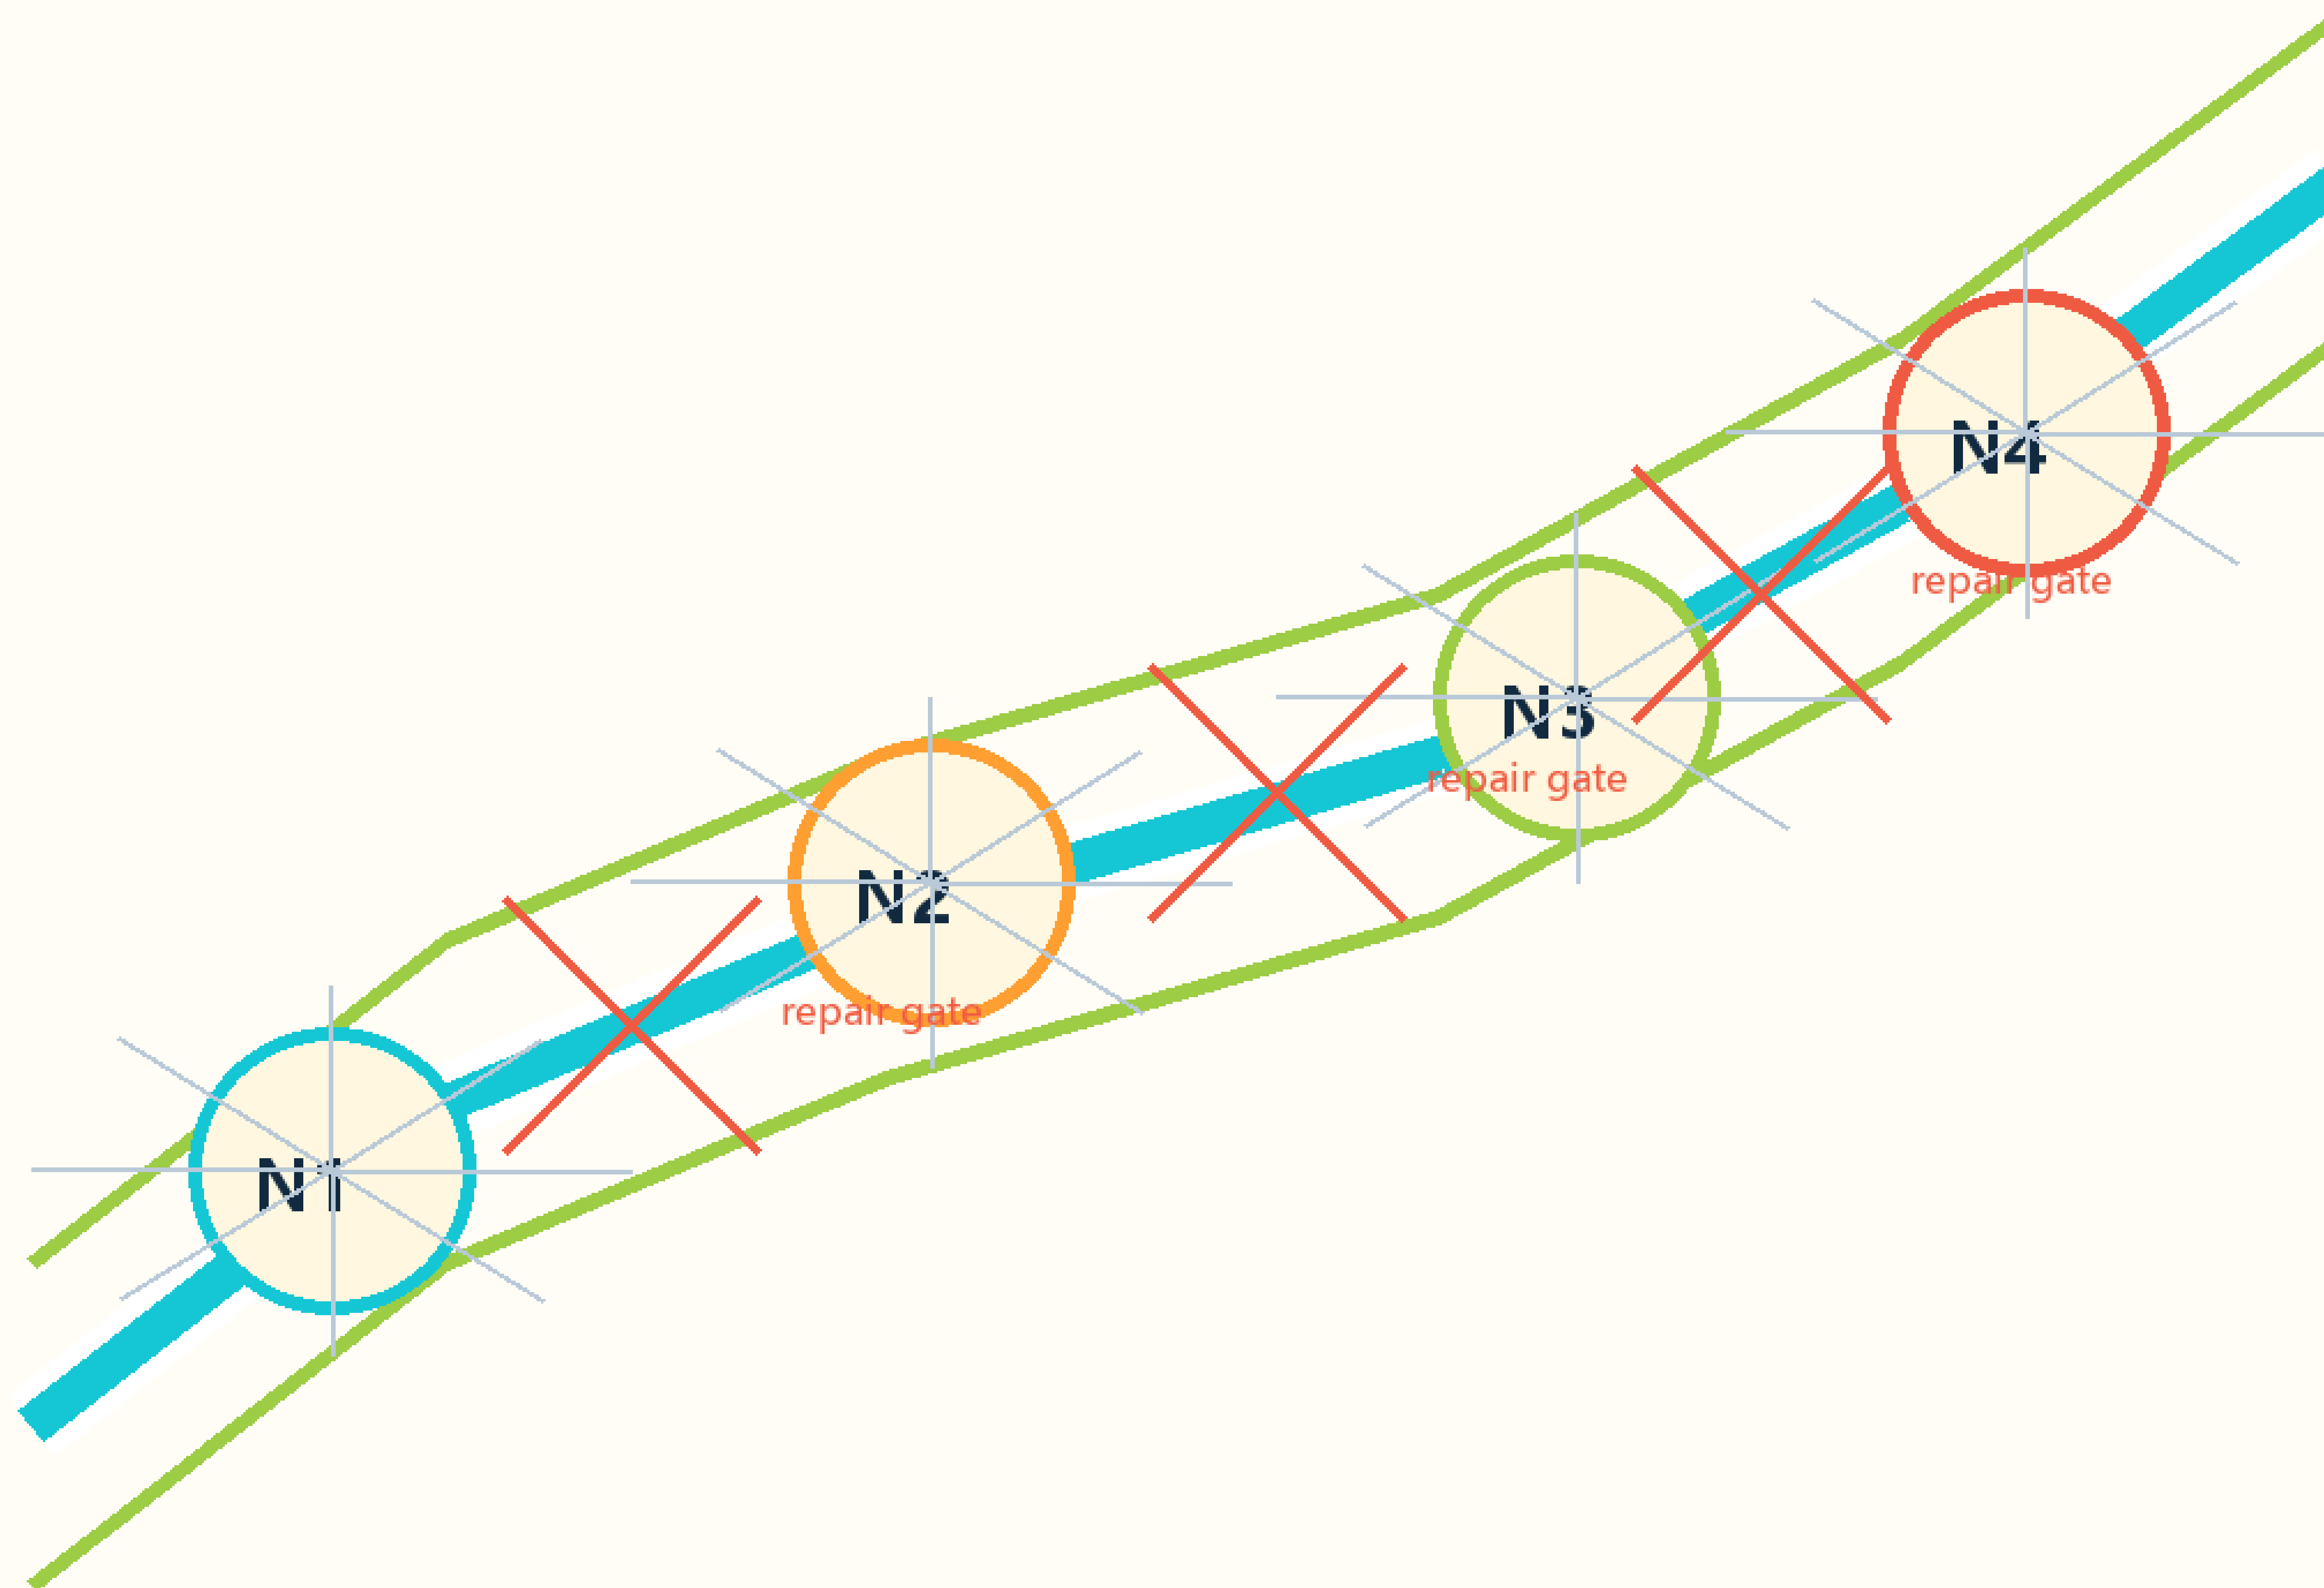

~~tree canopy + hourly sun model required~~

5-min coverage

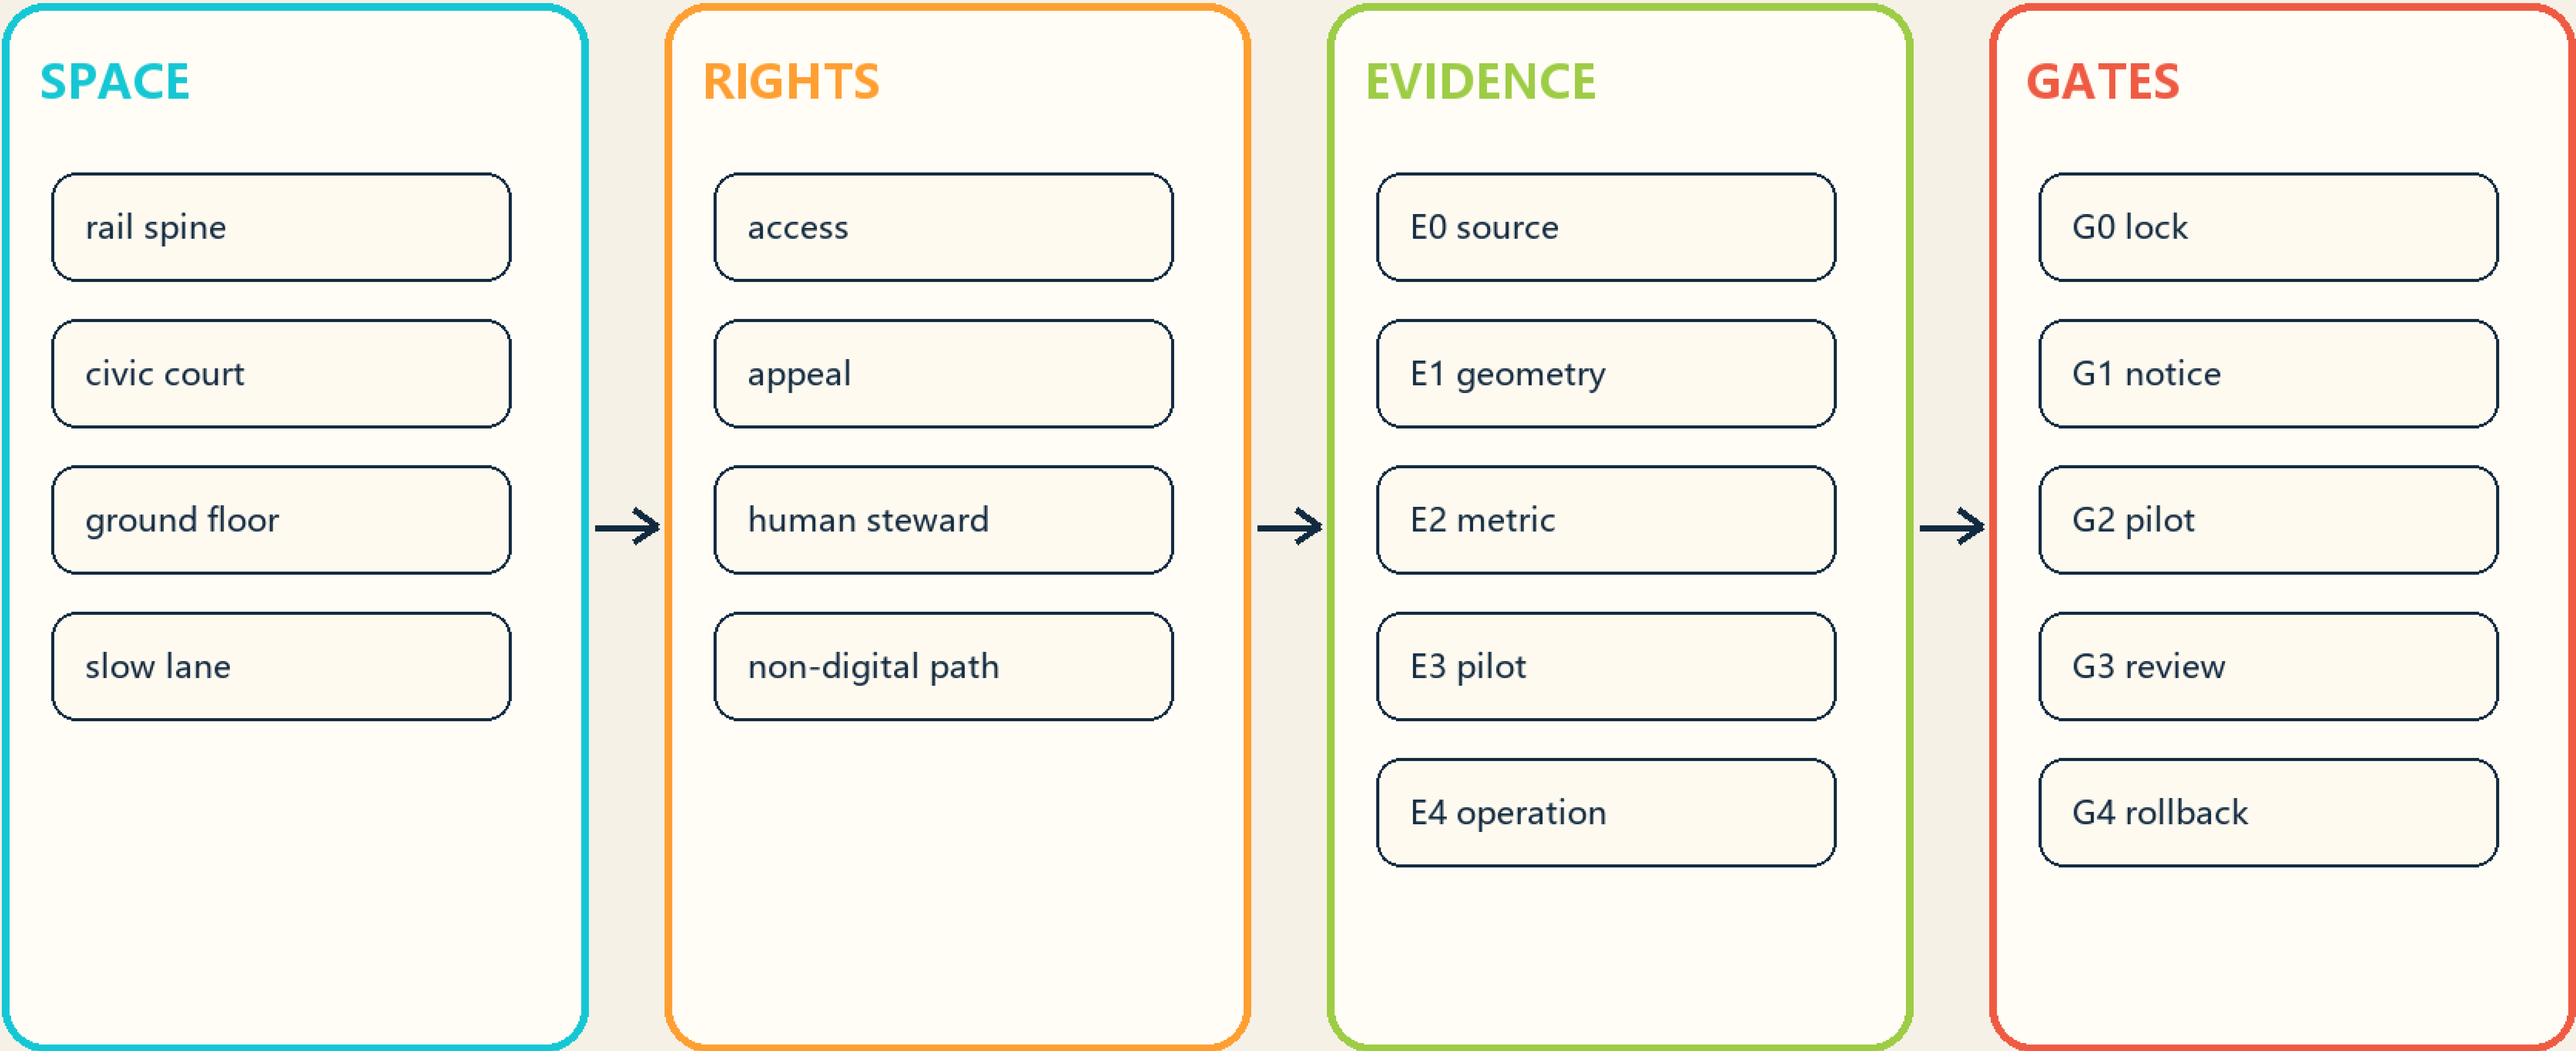

UNKNOWN

~~population grid + verified entrances required~~

Algorithmic routing may rank options, but cannot close public access or remove a non-digital route.

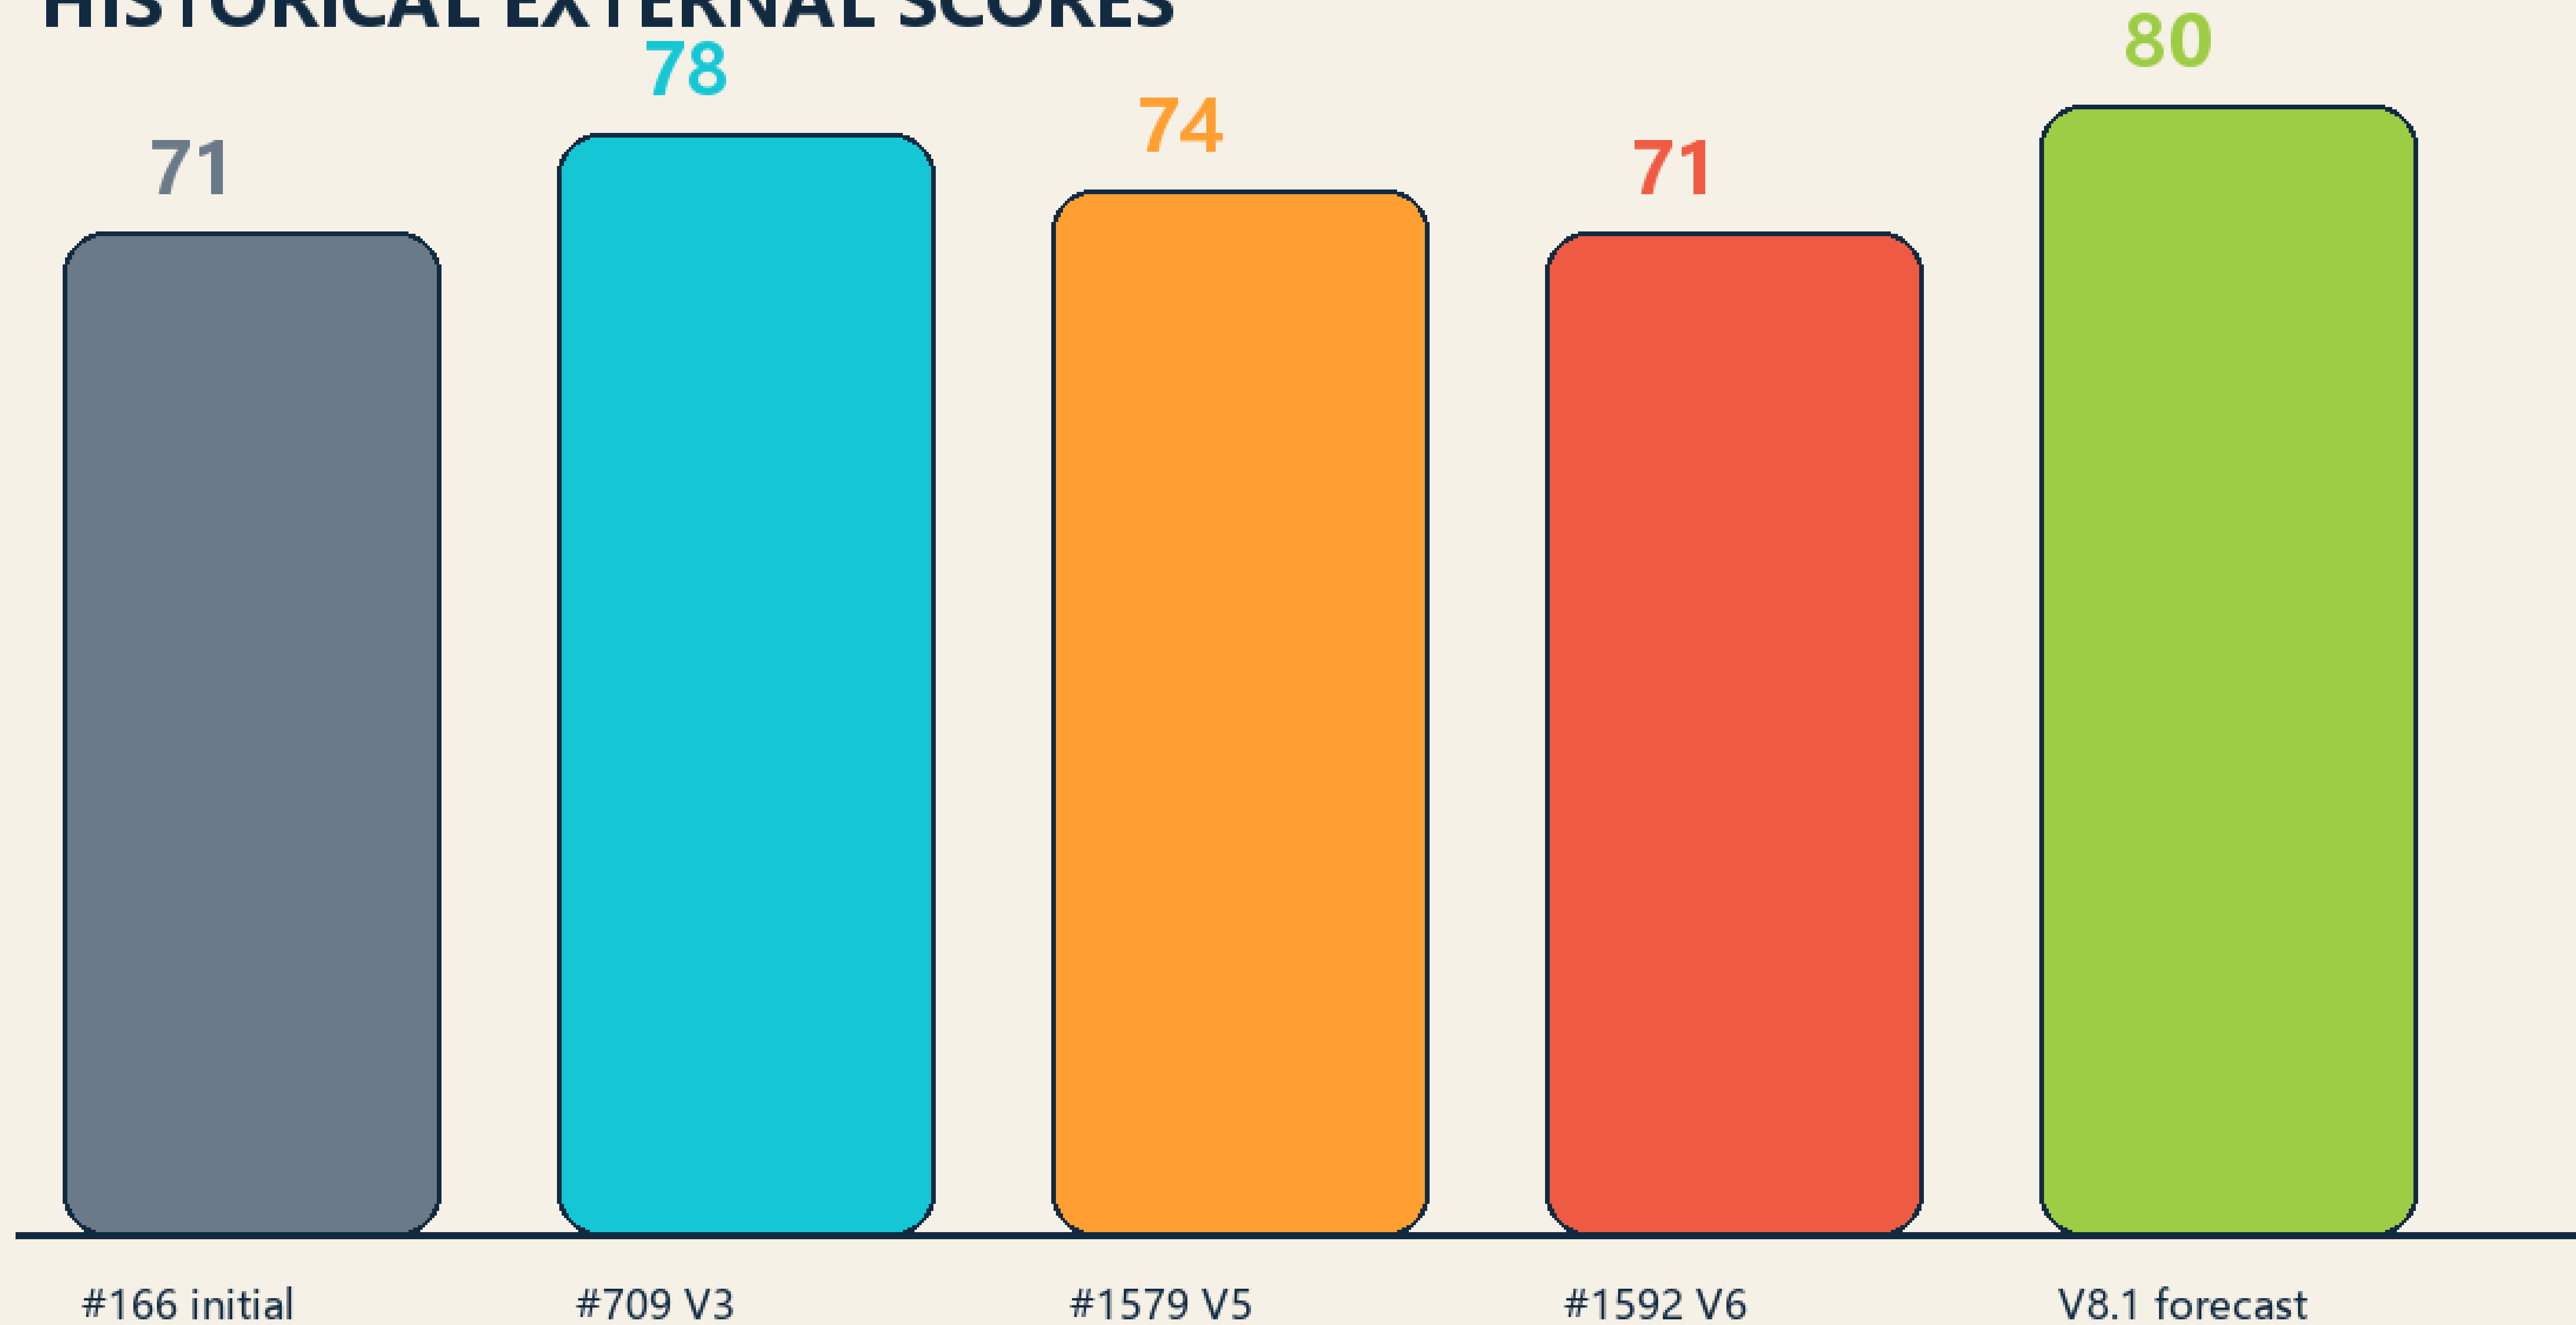

One intervention, one beneficiary, one evidence chain, one exit condition.

Score logic: V8.1 raises drawing specificity only when each spatial object carries public value, evidence, human review and rollback.

Gate readiness is separated from content score.

HISTORICAL EXTERNAL SCORES

V8.1 forecast range: 78-82. This is participant-side calibration, not an official jury score.

Highest observed external score was PR #709 at 78 because it made the public-value protocol, evidence anchors and digital governance contract machine-visible. V8.1 keeps that spine and makes hard spatial parameters visible in drawings.

EVIDENCE FLOW
